

| 1 that right? |  |
| :---: | :---: |
| 2 | PROFESSOR LEVIN: I don't follow what |
| 3 you mean. |  |
|  | MS. ZEMAN: Let's have you look at an |
| 5 example. On page 18 of Annex C about midway -- I'll |  |
| 6 wait for you to get there. |  |
|  | PROFESSOR LEVIN: Yes. |
|  | MS. ZEMAN: About midway down you see |
| 9 the case Novartis Pharmaceuticals Canada, Inc. v Teva |  |
| 10 Canada with the trial court neutral citation 2013 FC |  |
| 11 283. Do you see that? |  |
| 12 | PROFESSOR LEVIN: Yes. |
| 13 | MS. ZEMAN: And this case is coded as |
| 14 a pharmaceutical case. Is that right? |  |
| 15 | PROFESSOR LEVIN: Yes. |
|  | MS. ZEMAN: And it is coded as " N " for |
| 17 "utility." Is that correct? |  |
|  | PROFESSOR LEVIN: Yes. |
|  | MS. ZEMAN: Meaning that a validity |
| 20 challenge to utility was sustained, if I take the |  |
| 21 language from your presentation. Is that accurate? |  |
| 22 | PROFESSOR LEVIN: Yes. |
| 23 | MS. ZEMAN: This case is at tab 2 of |
| 24 your big binder. This is Exhibit C-244. If you turn |  |
| 25 to paragraph 170. |  |

```
PROFESSOR LEVIN: Yes.
MS. ZEMAN: You see the court says, "I
find that Teva's allegations as to lack of utility of
claim 14 of the '895 patent are justified."
PROFESSOR LEVIN: I see that, yes.
MS. ZEMAN: In paragraph 172, the
```

court says, "I find that Teva's allegations as to
lack of utility in respect of claims 1 and 2 of the
'937 patent not to be justified." You see that?
PROFESSOR LEVIN: Yes.
MS. ZEMAN: So these paragraphs state
opposite conclusions about lack of utility. Is that right?
14
PROFESSOR LEVIN: I'm not a lawyer, but my understanding is they're speaking to different claims within a patent.

MS. ZEMAN: But one of them says
"justified" and one of them says "not justified." Do you see that?
20
21 MS. ZEMAN: You'd agree those are
22 opposite conclusions?
23 PROFESSOR LEVIN: With respect to those claims, yes.

MS. ZEMAN: So in this case there are
www.dianaburden.com
two possible utility outcomes to select from for coding. Is that right?

PROFESSOR LEVIN: There are two possible outcomes for the unit of claims within the patent within this case.
6 MS. ZEMAN: For the unit of claims.
Okay. But in your dataset your unit was a case. Is that right?

PROFESSOR LEVIN: Yes.
9
10
-
wo opposite findings in one unit, you have an option of selecting " Y " or " N " in this case. Is that right?

PROFESSOR LEVIN: One has to have a
rule for coding the case based on the contained
within information. Those rules were laid out at the beginning of my Appendix $C$.

MS. ZEMAN: So this case, for example,
17 was coded "N" for utility, right?

PROFESSOR LEVIN: Yes.
20 MS. ZEMAN: And if I follow the logic,
22 utility, a single finding of invalidity is sufficient
23 to code the case as "N." Is that right?
24 PROFESSOR LEVIN: There's a caveat. 25 You just switched units to patent. So the rule for

## paragraphs 170 and 172.

2 MS. ZEMAN: So in one case where 3 there's more than one patent and more than one patent
4 had claims found invalid, like in this one, it would 5 be coded " N " for utility. Is that right?

PROFESSOR LEVIN: It would have to depend on what was going on at the level of patent to declare what was going on at the case.

MS. ZEMAN: And in this case that we looked at, you agree that paragraph 170 refers to the
' 895 patent, and paragraph 172 relates to the '937 patent. You see that?

PROFESSOR LEVIN: Yes.
13
MS. ZEMAN: So this is a case where there are two separate patents with separate invalidity findings.
17 PROFESSOR LEVIN: That's correct. And 18 because one of them was held to be not valid, that 19 caused the case to be coded not valid.
20 21 another example to make sure that I understand. 22 23 C-120. This is another case that involves a cho 24 of coding options for utility. This is Eurocopter v 25 Bell Helicopter. At paragraph 360, the court sets
www.dianaburden.com
www.dianaburden.com
1 inutility and code this case as "Y" for utility. Is

PROFESSOR LEVIN: Well, I didn't
ignore anything. Others were doing the coding. My
understanding of the rule was that at the level of
claims, if there was at least one claim upheld for a
given patent, the so-called split claim situation
like we have in Eurocopter, then the patent would be coded as valid, in which case if all of the patents involved in the case were upheld, it would be coded valid.

MS. ZEMAN: And it was the Claimant
12 13 who gave you this rule. Is that correct?

PROFESSOR LEVIN: They were the ones
15 who decided on the coding rules. I did have a
16 conversation on statistical grounds to make sure that
17 was a statistically appropriate coding rule, but the 18 substance of the rule was Claimant's decision.
19
MS. ZEMAN: I'd like to look at just
20 one more example here at tab 4 of your binder.
21
THE PRESIDENT: Ms. Zeman, before you
22 move on, this is the case we find in the annex on
23 page 17 in the middle?
24

25
MS. ZEMAN: Yes, correct.
THE PRESIDENT: It is C-120, simply
www.dianaburden.com
out its conclusions with respect to utility. It
finds, first, that "the utility of an embodiment
included in claim 15 (offset forwards) has been
demonstrated at the Canadian filing date..."
professor levin: Yes.
MS. ZEMAN: So that's one validity
challenge rejected?
PROFESSOR LEVIN: Yes.
MS. ZEMAN: Then it concludes that
"there is a lack of demonstrated utility or sound
prediction with respect to an embodiment included in
claim 16 (offset backwards)." You see that?
professor levin: Yes.
MS. zEMAN: That would be one validity
challenge sustained?
PROFESSOR LEVIN: Yes, to the claim.
MS. ZEWAN: Again, we have one patent
lawsuit case and a choice of two coding possibilities
on grounds of utility, correct?
PROFESSOR LEVIN: Once again, we have
to be precise about what level of unit are we talking
about. My reading of paragraph 360 is there was a
claim that was held invalid.
MS. ZEMAN: And so when there's a
claim held invalid, you ignore the finding of
www.dianaburden.com

MS. zeman: Yes, Exhibit C-120. At
tab 4 of your binder is Exhibit R-484 and is another
case that presented a coding choice for validity
challenges on grounds of utility. This is Uponor AB
$v$ Heatlink Group. This is one of the cases that was
updated in your update. Is that correct?
PROFESSOR LEVIN: Yes.
MS. ZEMAN: At paragraphs 163 and 164
of the decision the court sets out the first finding
on utility. In paragraph 164 it says, "...claims 2
and 3 and all of claims 4 to 18, as they depend on
either claim 2 or 3 , are invalid on the basis of
inutility." You see that?
PROFESSOR LEVIN: Yes.
MS. ZEMAN: It says, "As are apparatus
claims relating to filters 36 and 37, and claim 38,
as it depends from claim 36 or 37." You see that? PROFESSOR LEVIN: Yes.
MS. ZEMAN: And at paragraph 166, the
MS. ZEMAN: And at paragrape
21 last sentence, which is on the next page, there is
22 another finding. It says, "Claim 21 and each of
23 claims 22 to 38... are invalid for lack of utility."
24 You see that?
25

PROFESSOR LEVIN: Yes.
www.dianaburden.com

1 MS. ZEMAN: And that's because the
2 promise utility doctrine came into existence then. 3 Is that your understanding?
4 PROFESSOR LEVIN: I don't know for sure that it was my understanding.
6 MS. ZEMAN: At tab 7 of the big red 7 binder in front of you --

PROFESSOR LEVIN: Tab 7?
$9 \quad$ MS. ZEMAN: Yes -- is slide 70 from 10 the Claimant's opening presentation, which updated
11 its figure 3 from its Memorial. This updated figure
12 is based on your report as updated. Is that correct?
13 I think it's very faintly written on the bottom.
14 PROFESSOR LEVIN: What was faintly 15 written on the bottom?

16 17 report
18
ROFESSOR LEVIN: I can't see it
MS. ZEMAN: Do you recognize these
20 numbers as consistent with the ones that you
21 presented?
22
23 yes.
24 25 ri right half of this in your presentation yesterday.
www.dianaburden.com

| www.dianaburden.com |  |
| :--- | ---: |
| 1253 |  |

1 PROFESSOR LEvin: That's the first
2 part of the sentence, yes.
3 MS. ZEMAN: And then it introduces
4 Figure 3.
5 PROFESSOR LEVIN: Yes.
6 MS. zeman: So, based on this
7 statement and your understanding, it would be logical
8 to conclude that the courts began their application
9 of the promise utility doctrine on January $1,2005$.
10 Would you agree?
PROFESSOR LEvin: Idon't know. I'm 12 not an expert on the law. I don't know when the 13 courts did what.
14 15 If you were interested in measuring the impact of the 16 promise utility doctrine and it came into existence
17 at a certain moment in time, it would be logical to
18 conduct your analysis as of the date that it came
19 into existence. Would you agree with that?
20
21 yes.
22 MS. ZEMAN: The Claimant's Canadian
23 legal expert, Professor Siebrasse, has identified
24 three cases specifically as the beginning of the
25 promise utility doctrine in Canada. At tab 9 of your

1 Is that correct?
2 PROFESSOR LEVIN: Yes.
3
4
4
5 top two circles for a moment, pharmaceutical cases

PROFESSOR LEVIN: Yes.
MS. ZEMAN: And 41 percent inutility
outcomes for pharmaceutical cases from 2005 to 2016.
Is that right?
$\begin{array}{ll}13 & \text { PROFESSOR LEVIN: Yes. } \\ 14 & \text { MS. ZEMAN: Divided as in your report }\end{array}$ at January 1, 2005. Is that right?

PROFESSOR LEVIN: Yes.
17 MS. ZEMAN: At tab 8 of your binder is
states, "...as Figure 3 indicates, since the Federal
21 Courts' application of the promise utility doctrine
22 began in 2005, inutility findings have jumped from
23 zero to 40 percent" -- as it was then -- "for
24 pharmaceutical patents...."
25
Is that right? That's what it says?
www.dianaburden.com
excerpt from Professor Siebrasse's first
Expert Report where at paragraph 72 he states, "The
substantive requirement that utility be assessed by
reference to the 'promise of the patent,' was adopted
at the trial level beginning in 2005 and affirmed by
the Court of Appeal in 2008. The change had no basis
in prior case law or the Act." You see that?
PROFESSOR LEVIN: I see that.
MS. ZEMAN: There's a footnote 98 --
MR. SMITH: Mr. President, if I may,
Professor Levin has already indicated that he is not
an expert on Canadian law, and I just wanted to check
13 on this line of questioning, which has been going
14 on --
15 THE PRESIDENT: The line of 16 questioning is simply going to where he draws the line of 2005. Overruled.
MS. ZEMAN: In footnote 98 he identifies three cases, Bristol-Myers Squibb v Apotex Inc. 2005, FC 1348; Pfizer Canada Inc. v Apotex Inc., 2005 FC 1205; and Aventis Pharma Inc. v Apotex Inc., 2005 FC 1283.

You see that?
PROFESSOR LEVIN: I see that.
MS. ZEMAN: Let's take a look at these

application for redirect?
2 MS. ZEMAN: None.
3 QUESTIONS BY THE ARBITRAL TRIBUNAL
4 SIR DANIEL BETHLEHEM: Professor
Levin, I'm just a little confused about this answer.
6 If we go back to this tab 7, I understood from your
response to Ms. Zeman that you said that,
notwithstanding that there would be a variation of
9 the inutility percentage to 40 percent, it would not
10 make any difference to your analysis. Is that
11 correct?
12
PROFESSOR LEVIN: To the primary 13 finding, the first task about looking post-2005, yes.
14 SIR DANIEL BETHLEHEM: Right. Now,
15 accepting that there may be variations, I just don't
16 have my mind around these numbers but, assuming that
17 there is a 40 percent inutility in the period
18 1980-2004 and roughly -- no doubt that number would
19 change -- roughly a 40 percent inutility in the
20 period 2005-2016, is that not significant?
21 PROFESSOR LEVIN: We need to clearly
22 distinguish the various questions. We have four
23 charts in front of us, four pie charts, and you can
24 make different comparisons of different sorts. So my
25 primary affirmative point, Question No. 1 that I was
www.dianaburden.com
more relevant question the comparison of pharma and
non-pharma pre versus post, so that's a difference
3 between pharma and non-pharma pre, and did that
increase significantly to pharma versus non-pharma
post-2005. Because that speaks to the question
directly of whether the impact of the law as it
impacts pharmaceutical versus non-pharmaceutical
itself had a change over time. You can't get that
from just looking at pharmaceutical alone.
SIR DANIEL BETHLEHEM: In your presentation yesterday, you concluded -- I don't have
the -- well, I do actually have the citation in the
transcript but it's not relevant to turn it up, it's
14 at 17:42:15 -- your conclusion was that the
15 conclusions are consistent with the Claimant's view
16 that Canadian utility law had a disproportionate
17 impact on the pharmaceutical sector since 2000. That 18 was your conclusion?
19 PROFESSOR LEVIN: Yes.
20 SIR DANIEL BETHLEHEM: This is a
21 conclusion that goes to causation, doesn't it? I
22 mean you are saying that it's Canadian utility law
23 that had a disproportionate impact on the
24 pharmaceutical sector since 2000?
25

PROFESSOR LEVIN: That is Claimant's
www.dianaburden.com
asked, was to compare pharmaceutical and non-pharmaceutical cases post-2005. That has nothing to do with what happened pre.
4 SIR DANIEL BETHLEHEM: Let me just
stop you there. So I appreciate, from what you've
6 just said, that the change in the numbering would not
have any impact necessarily on your assessment of the
differential effect between pharmaceutical and
non-pharmaceutical patents.
PROFESSOR LEVIN: Yes, that's correct.
SIR DANIEL BETHLEHEM: But as regards
11
12 the change over time, simply as regards
pharmaceutical patents, that is relevant, isn't it?
14 PROFESSOR LEVIN: Yes. It would alter
15 the proportions of inutility cases in the
16 pharmaceutical sector pre versus post. However, as I
17 testified in regard to table 2 of my report, that is
18 a very treacherous, shall we say, comparison because
19 of the small numbers involved. If we're going to
20 rely, as I believe Respondent might, on the lack of
21 statistical significance between those two
22 proportions and draw from that conclusion, therefore,
23 that they were identical in truth, that's problematic
24 because of low power.
25
I'd also like to add that I consider a
www.dianaburden.com
alternative hypothesis. It is causal, yes.
SIR DANIEL BETHLEHEM: But your
conclusion is a causation conclusion? I mean in that
statement that I've just read, which is in the
5 transcript, you are saying it's the Canadian utility
6 law that had a disproportionate impact on the
7 pharmaceutical sector?
8 PROFESSOR LEVIN: The statement was
9 "it is consistent with." I'm not opining about
10 causality as a statistician in this case. But it is
11 consistent.
12
SIR DANIEL BETHLEHEM: That's
13 precisely what I wanted to get at, whether you were
14 opining on causality or not, because from the
15 statement in the transcript it sounds as if you were
16 opining on causality, and my question to you is could
17 there have been other causes of the impact on a
18 pharmaceutical sector, decisions on utility apart
19 from the Canadian utility law. I mean, for example,
20 an increase in pharmaceutical patent invalidity
21 actions or something of that nature.
23 your question in two, or possibly three, parts.
24 First on the general point I am not opining on
25 causality. I was not asked to do that; I am not
www.dianaburden.com
qualified to offer on opinion. I offered a
statistical opinion which is the rejection of the
null hypothesis was consistent with a causal
4 hypothesis, that of Claimants. I agree there could
5 be other causes; I'm not here to say one way or the 6 other.
$7 \quad$ On the specific example you just
8 mentioned -- and l'd appreciate it if you would
9 repeat that example, but I wanted to say that there
10 was a problem with that.
11
SIR DANIEL BETHLEHEM: I don't have
12 the words in my mind and I don't propose to go back
13 to the transcript because I was rather thinking
14 aloud. I'm just trying to identify whether there may
15 have been other causes of a disproportionate impact
16 on the pharmaceutical sector apart from the Canadian
17 utility doctrine which would not have been captured
18 by the statistical analysis. For example, simply an
19 increase in the number of pharmaceutical cases which
20 had nothing to do with the utility doctrine, but
21 simply because there was some other reason for the
22 increase in pharmaceutical cases.
23
PROFESSOR LEVIN: Well, thank you.
24 That was precisely what you had said and you
25 refreshed my memory. That would not be an example
www.dianaburden.com

1 equal to 71 appearing over the number 8 , and there is 2 a value here in excess of 10 billion. The exact
3 number is $10,639,125,640$. This is called the
4 binomial coefficient. It's read 71 choose 63 , and it
5 gives the number of ways of choosing a subset of size
663 from an urn with 71 chips. The reason that 71
7 choose 63 is the same as 71 choose 8 is because, as
8 you recall the graphical display, there are this many
9 ways of choosing 63 chips and letting them remain in
10 the urn, while the complementary eight chips are 11 withdrawn.
12
So in general a binomial coefficient, 13 generally if we say A choose B, would be the number 14 of ways of withdrawing a subset of size B from a 15 group of chips of size A. The formula for a binovial 16 coefficient is you take the top number and you
17 multiply by successfully smaller numbers, A, A minus
181 , A minus 2 , $A$ minus 3 and so on, for a total of $B$ 19 factors, so there are B product terms here.
20 And then one divides by what's called
21 B factorial. That's the product of the B integers,
$22 B, B$ minus $1, B$ minus 2 all the way down to 3,2 and
23 1. So that is a calculating formula for how many 24 subsets of size B from a set of A.
25
Second step is saying well, okay,
www.dianaburden.com

| 1273 | 1274 |
| :---: | :---: |
| 1 probability of that table. This second number is | 1 facts in the present case hinge on the second row. |
| 2 another very large number, I don't remember it off | 2 The variations we've been discussing in the pharma |
| 3 the top of my head, I could calculate it if you want | 3 case, whether you change the numbers a little bit, |
| 4 the numerical value, but that calculation -- 46 times | 4 code it differently, really are not what's relevant |
| 545 times 44 down to 45 divided by 8 times 7 times 6 | 5 in terms of the quantitative value here. |
| 6 times 5 down to 1 -- that is the fraction that -- | 6 If you made that 1 and that 7 -- |
| 7 this, and then that divided by that 10 billion number | 7 THE PRESIDENT: No, no. Simply stay |
| 8 is the probability. | 8 only with 1 because I know we, as professors, love to |
| 9 So all together this is the | 9 change hypotheses, but let's stick to 1. 24/1. |
| 10 probability of the table, and in this example, that | 10 PROFESSOR LEVIN: Yes. I believe that |
| 11 was the value, . 0245. | 11 would not be statistically significant. Notice that |
| 12 The third step doesn't apply to the | 12 there would still be a substantial difference in the |
| 13 particular table here because this table is as | 13 proportions. You'd have something close to 40 versus |
| 14 extreme as you can get. There are no pharmaceutical | 141 and 8. That's $121 / 2$ percent. You'd still have a |
| 15 invalidations. In general, if this were not zero, | 15 30, roughly, percentage point substantive difference, |
| 16 one would have to add the other probabilities of the | 16 but I believe that would not be significant. |
| 17 tables consistent with these margins, and the sum of | 17 THE PRESIDENT: The last question is |
| 18 probabilities as just calculated, over all those | 18 the -- I don't know whether you call the number |
| 19 tables as extreme or more extreme, that's the | 19 itself, the number of cases, the population? |
| 20 P -value. | 20 PROFESSOR LEVIN: Yes. |
| 21 THE PRESIDENT: How sensitive is this? | 21 THE PRESIDENT: Is the population not |
| 22 If you take, for example, the 25/0, which you say is | 22 somewhat small here in this case to make these type |
| 23 an extreme case, you would have a situation 24/1. | 23 of calculations? |
| 24 How would that affect the P-value? | 24 PROFESSOR LEVIN: My answer to that is |
| 25 PROFESSOR LEVIN: Yes. The particular | 25 no. Yes, we have the universe or the population |
| www.dianaburden.com | www.dianaburden.com |

2 The data are what they are.
$3 \quad$ The size of the two groups -- in
4 particular if you were pointing to that 8 as a small
5 number -- the smallness of that margin is taken
6 account of by the P-value. One of the things which I
7 state in footnote 7 , I believe, of my report is that
8 there's something of an asymmetry here, which is that
9 in small numbers, if you get a significant result,
10 that's somewhat remarkable. Typically it means that
11 you're dealing with a large difference, a large
12 effect. If you do not get a significant result in a
13 low power situation, as I mentioned, one cannot
14 conclude, oppositely, that therefore nothing is going
15 on. It is not statistically significant, but there's
16 a danger, a probability of making a type 2 error. A
17 type 2 error is an error of omission, where something
18 really is going on but you failed to declare it as
19 statistically significant.
20 So I am not particularly concerned
21 with the smallness of the numbers in the fact that
22 there's still a significant difference.
23 As far as other concerns with small
24 samples, let me just reiterate that this is not a
25 sample. This is a universe. This is the population.
www.dianaburden.com

| PROFESSOR MERGES: Robert Patrick <br> Merges. <br> THE PRESIDENT: You appear as an expert witness for the Claimant? <br> PROFESSOR MERGES: Yes, that's right. <br> THE PRESIDENT: If any question is <br> unclear to you, either because of language or for any other reason, please do seek a clarification because, if you don't do so, the Tribunal will assume that you've understood the question and that your answer corresponds to the question. <br> PROFESSOR MERGES: Understood. <br> THE PRESIDENT: Professor Merges, you <br> will appreciate that testifying, be it before a court or an arbitral tribunal, is a very serious matter. <br> In that connection, the Tribunal expects you to make the declaration, the text of which is in front of you. <br> PROFESSOR MERGES: Yes. This is the <br> expert declaration. I solemnly declare upon my honor <br> and conscience that my statement will be in <br> accordance with my sincere belief. <br> THE PRESIDENT: Thank you. Could you please go to your Expert Report? <br> 13 Professor Merges, could you please provide your 14 presentation for the Tribunal. <br> 15 PRESENTATION BY PROFESSOR MERGES <br> 16 PROFESSOR MERGES: Yes, I will. <br> 17 First of all, who am I? I am a <br> 18 Professor at U.S. Berkeley where I teach patent law, <br> 19 intellectual property, also transnational <br> 20 intellectual property contracts. I'm the author of <br> 21 several case books. Patent Law and Policy, which is <br> 22 now in its 6th edition, l'm working on the 7th these <br> 23 days, which I think is the most widely adopted patent <br> 24 case book in the U.S. I'm also co-author of a basic <br> 25 text on intellectual property law which, as you know, | THE PRESIDENT: Page 21? The Expert <br> Report is dated September 29, 2014. Please confirm <br> for the record that the signature appearing above <br> your name is your signature? <br> PROFESSOR MERGES: Yes, that's me. <br> THE PRESIDENT: Could you then go to <br> your second Expert Report and go to page 22? The <br> second Exert Report is dated September 10, 2015. <br> Could you confirm for the record that the signature appearing above your name is your signature? <br> PROFESSOR MERGES: Yes, that's mine. <br> THE PRESIDENT: Are there any <br> corrections you wish to make to either report? <br> PROFESSOR MERGES: There's a small <br> errata in the First Report, Mr. Chairman. If you <br> look at paragraph 6 in that First Report, in that <br> paragraph I am citing to an academic study that was <br> done by John Allison and Mark Lemley published in 1998. Do you see the reference there? <br> 20 <br> THE PRESIDENT: It is footnote 6, <br> isn't it? <br> 22 PROFESSOR MERGES: Yes, that's the <br> 23 one. In that paragraph I have overstated the rate of <br> 24 invalidity of utility challenges. The table from <br> 25 which I drew that number -- this is going to be <br> www.dianaburden.com <br> 1 covers copyright patent and trademark, and the 7th <br> 2 edition of that book has just come out this month. <br> I'm also the author of many scholarly <br> 4 books and articles on intellectual property, in <br> 5 particular patent law and probably most particularly <br> 6 law and economics of patent law would be sort of my <br> 7 sub-subspecialty. <br> 8 I have been teaching patent law in one <br> 9 form or another coming up on 30 years, and I also <br> 10 teach, as I say, intellectual property for most of <br> 11 those 30 years. That's my basic background. <br> 12 I've got several major points to make, <br> 13 which I'll try to be concise about. The first is <br> 14 that the traditional utility test in the U.S. <br> 15 presents a very low bar to patentability and is <br> 16 usually, almost always, very easily satisfied. It's <br> 17 really quite a minor test in U.S. patent law. <br> 18 <br> The second point is that utility <br> 19 doctrine has been stable for many years. The utility <br> test under U.S. law has been a low bar for a long <br> time and remains so today. <br> 22 The third point that I'll try to <br> 23 emphasize is that utility, like all the different <br> 24 requirements for patentability, is quite distinct <br> 25 from non-obviousness, from enablement, from novelty. |
| :---: | :---: |

| 1 It has its own role to play, and it's wrong to |  |
| :---: | :---: |
| 2 conflate utility with the other requirements of U.S. |  |
| 3 patent law. |  |
| 4 The fourth point I'll make is somewhat |  |
| 5 of a comparative point, and that's that Canada's |  |
| 6 promise utility doctrine really has no parallel in |  |
| 7 |  |
| 8 doctrine generally. |  |
| 9 | So those are the major points th |
| 10 will cover. |  |
| 11 | Let me start with the first one which |
| 12 is patentability is a low bar. As you've heard by |  |
| 13 now several times, utility is often just presumed. A |  |
| 14 well-established utility for an invention is just |  |
| 15 presumed by the examiner. So in a typical case |  |
| 16 involving, let's say, a mechanical invention, the |  |
| 17 economical new mouse trap, or gearshifter for a |  |
| 18 bicycle or something like that, almost on the title |  |
| 19 of the patent you can see it has a utility. If you |  |
| 20 build a structure, you can tell what it's used for, |  |
| 21 and so the examiner mentally just checks that box and |  |
| 22 it's quite straightforward. |  |
| 23 The same would be true if you're |  |
| 24 presented with a patent on an electrical circuit, |  |
|  | something like that. If you're going to have a |

www.dianaburden.com

| 1285 | 1286 |
| :---: | :---: |
| 1 that you need to have a practical utility in order to | 1 straightforward. |
| 2 have a patentable subject matter, and by "practical" | 2 There is, of course, with any |
| 3 what the Supreme Court meant in that case was simply | 3 doctrinal area certain common law development. I |
| 4 not related to pure research objectives. So there's | 4 believe, Mr. Chairman, you were asking one of the |
| 5 kind of a very straightforward dichotomy there. | 5 witnesses -- maybe it was you, Sir Daniel -- to go to |
| 6 There's pure research, theoretical interest only, and | 6 the root of foundation of the utility standard, which |
| 7 then there's the world of practical commerce, | 7 is just the word "new" and "useful" in a lot of |
| 8 practical or substantial utility, and that's the | 8 Patent Acts, so we have to take off from a single |
| 9 line. It's a pretty straightforward line and it's | 9 word, "useful," and develop a body of law to apply |
| 10 not a very high bar. | 10 the specific technologies and specific situations. |
| 11 As that case established, and as many | 11 So like a lot of issues in patent law there is a |
| 12 subsequent cases have held, the basic standard is | 12 foundation -- actually in our system there's a |
| 13 just operability. The invention just has to work. | 13 foundation in the constitution of the U.S. system -- |
| 14 And when I say "the invention" I mean the claimed | 14 and then there's an embodiment of the constitutional |
| 15 invention, because that's where we look to see what | 15 principles in a simple statute. Single word, section |
| 16 the nature of the invention is. So when we ask does | 16 101, "useful." So common law elaboration and |
| 17 this invention have utility, we simply say does the | 17 application of the basic concept is, of course, |
| 18 claimed invention work for its basic purpose. That's | 18 necessary. |
| 19 really the question, and it's very straightforward. | 19 The key is that as you look at the |
| 20 There are a lot of degrees of efficacy | 20 development of the doctrine it's important to sort of |
| 21 or attributes of performance that go well beyond | 21 keep your eye on the ball, because, like any |
| 22 workability or operability. U.S. patent law has | 22 doctrine, there are moments of ferment and there are |
| 23 never required that you prove any of those higher | 23 times when the doctrine is being adapted to new |
| 24 levels of performance. That is not necessary. The | 24 conditions, but the fundamental test is the outcome, |
| 25 claimed invention has to work. Simple, | 25 is the rate of invalidity changing in a radical way, |
| www.dianaburden.com | www.dianaburden.com |

1 and from that measure I am very confident in saying
2 utility in the U.S. doesn't change and hasn't
3 changed. It's a very stable, a very, very persistent
4 standard and test, and although new areas come and 5 go, it is basically the same.
$6 \quad$ Utility in pharmaceuticals and 7 chemicals, of course, is one of those areas where
8 we've had to adapt the basic principle of utility and
9 what it means to be useful. As you've heard I think
10 a couple of times, what's distinctive about this
11 field technologically is that unlike, say, the
12 mechanical arts or, as I was saying, the electrical
13 field -- "electrical field" is a bit of a pun but I
14 didn't intend it -- unlike those areas in
15 pharmaceuticals and chemicals we often -- I say
16 "we" -- researchers build structures before they know
17 for sure what they might do. Sometimes it's just an
18 organic chemist who is purely interested in
19 synthesizing a new class of molecules just to see if
20 the darn things will hold together. Sometimes it's a
21 researcher who has an intuition that this class of
22 compounds might behave similarly to a class of
23 compounds that's understood, but it's not a proven
24 theory. It is an intuition based on their sense of
25 how these chemical structures work. And it's really
www.dianaburden.com
1 www.dianaburden.com

2 the utility standard.
3 So chemical and pharmaceutical
research is a little different from other research,
but the utility standard is the same. It doesn't
change. Same standard. The field's a little
different; the standard doesn't change.
I want to go on to talk about how utility is distinct from other doctrines.

We talk often about the basic requirements of patentability, and it's important to separate them out and understand that each has its own function. This is a body of law in the U.S. that's over 200 years old and it has streamlined over the years, and so we can infer that a test that has 16 survived ever since the first Patent Act in 1790,
17 from the days of Joseph Story and Thomas Jefferson
18 and Alexander Hamilton, if it survived it must be
19 some useful purpose. Utility does serve an important
20 function but it is distinct from the other
21 requirements of patentability.
22
路
24 Federal district court judge is appointed they will 25 often sign up for our boot camp at Berkeley, and

1 important, I think, to get some context to think
2 about the way chemists kind of view the world.
3 They're very spatial thinkers. If you've ever had
4 any interactions, they love these ball and stick
5 models and they're always playing with chemical
6 structures in three dimensions, and a lot of times
7 the birth of a new chemical or pharmaceutical
8 compound invention will be somebody who says, you
9 know, this is an interesting class of compounds, I
10 wonder if I could get it to hold together and I
11 wonder if it would behave similarly to this other
12 class of compounds that is shaped somewhat the same.
13 And it starts with that kind of intuition.
14 But the point is, unlike when you
15 build a mouse trap where you know the purpose when
16 you set out, "I want to trap mice," or an electrical
17 circuit, "I want to sense motion," you don't do the
18 same thing. You have an intuition what it might be
19 good for and then there's a lot of work that goes 20 into just building the thing.
21 The point is we have structure before
22 we know for sure what the function and use is, and
23 that's very distinctive to the chemical fields. Even
24 so, the same standard basically applies. If you can
25 show operability for that compound or class of
www.dianaburden.com

## 1289

1 these are the trial court judges in our Federal
2 system and they're going to have to be dealing with
3 intellectual property cases and some have a
4 background in this area and some don't, so we have a
5 set of very simple visuals we use to teach them the
6 basic requirements of patentability -- I often will
7 teach the patent section of this seminar -- and we
8 use a series of hurdles, because I think it's the
9 easiest visually.
10
11 have trouble on the little PowerPoint, you know,
12 finding a hurdle that looks that low. It's almost
13 like kind of stepping over a curb. It's the first
14 hurdle and it's distinct. Then, of course, you go on
15 to novelty, and then you go on to non-obviousness and
16 go on to disclosure, but we teach it sequentially for
17 a reason because they're logically interrelated, and
18 conflating them, I think, is a major conceptual
19 mistake, for reasons that hopefully we will see.
The primary conflation I see going on
21 at times is between utility and the disclosure
22 requirements of U.S. law, which are listed in section
23112 of our statute, primarily enablement and written
24 description relevant for our purposes.
25
A simple point, enablement and written

2 are very different tests. Disclosure under section
3112 has a very distinct purpose from the requirement 4 of utility.
5 So how do we know that? How do we
6 know they're not the same test? Because many patents
7 are invalidated for failure to meet the section 112
8 requirements when those same patents satisfy the
9 utility standard. Many, many patents that are
10 invalidated for 112 have satisfied section 101. Why?
11 Utility is much easier to meet and 112 is doing
12 different work. That's the primary reason.
$13 \quad$ So in what way is utility different
14 from some of these other standards? It is a
15 straightforward, very simple threshold requirement
16 and I like to teach it as a very binary question.
17 Does your invention work or not? Is it operable or 18 not? Very simple.
19 Enablement and written description are
20 keyed to how broad your claim is, right? You've
21 heard a lot about genus and species because that's a
22 concept we use in patent law a lot, and you have to
23 think about a patent claim as covering a
24 technological space, right? It's a set of words that
25 defines a verbal boundary and inside that boundary
www.dianaburden.com

1 are many different embodiments which are things that
2 are covered by that verbal formula. Enablement and
3 written description have to do with have you taught
4 enough to merit or deserve the breadth of your
5 claims. Narrow claims, less teaching. Broad claims,
6 more teaching. There's a sense of commensurateness
7 that's built into enablement and written description.
$8 \quad$ Utility is very different. We ask is
9 the claimed invention workable, is it operable, does
10 it basically work. We look at the nature of the
11 invention from the claims and then we simply ask has
12 it been shown or is it self-evident that it works,
13 and, if so, you clear that first hurdle very, very
14 easily.
15 I'll probably have a chance to go 16 through that a little bit more, but I need to proceed
17 on.
18
Now we get to the promise utility
19 doctrine, which is really why we're here. I could
20 just say straightforwardly there's nothing in U.S.
21 utility law that's at all like the promise utility
22 doctrine. There's certainly nothing in our law of
23 utility where you would find that it drives such
24 extreme outcomes. You wouldn't find an area of law
25 where utility is invalidating 40 percent of the cases
www.dianaburden.com

## 1293

1 that are challenged on the grounds of utility. You
2 can look in vain for utility cases in any given week
3 or month of the U.S. patent quarterly. That's our
4 little weekly publication that comes out, and if
5 you're sort of a patent nerd like I am you read it
6 every week. And you can go years -- a year anyway --
7 without seeing a utility case under U.S. law. You
8 can see many cases where enablement and written
9 description come into play but utility is very rare.
So why is the promise utility doctrine
different? It's because the statements about
performance characteristics or qualities or features
of the invention, which are stated in the written
description part of the patent, the part that comes
before the claims, in the promise utility doctrine
16 world those statements are combed through and
scrutinized very carefully, whereas under utility
doctrine that is not the case. There is not this
same search for this kind of magical promise. We
just say what is the claimed invention, does it work, and it's a very different kind of inquiry.

Again, you can get caught up in
doctrine but, you know, I think the key is to keep
24 your eye on the ball. Outcomes. Utility in the U.S.
25 rarely invalidates a patent. Promise utility in

1 Canada, major problem. How do we know? Here we are, 2 right?
3 Let's take a look at a couple of
4 different patents in this case, a couple of data
5 points on what l'm talking about. The first is the
6 atomoxetine or Strattera patent. What is the claim?
7 The use of atomoxetine for treating ADHD. What is
8 the evidence introduced? It's a peer-reviewed,
9 double blind, pilot study and it is published in a
10 scientific journal, and it shows the statistically
11 significant efficacy; more than half the patients
12 showed improvement based on the protocol.
13 The U.S. law of utility, I think, as
14 applied to that invention, was an easy call. It was
15 not challenged for lack of utility by the examiner,
16 and so the examiner just checked the box. The
17 claimed invention, use of atomoxetine, was basically
18 operable. The study showed that. Some related
19 animal studies and other data showed the same thing.
20 The Canadian court combed through the specification,
21 that is to say the written description not the claims
22 part of the patent, and said implicit in this
23 promise -- I don't think the word "promise" appears
24 in the patent -- implicit in this promise is that
25 atomoxetine will work in the longer term. Claimed
www.dianaburden.com

1 invention: Use of atomoxetine for treating.
2 Promise: It will work in the long term. We just
3 don't see anything like that in U.S. utility law.
$4 \quad$ Now go on to olanzapine where the
claim is to the use of olanzapine to treat
schizophrenia -- a very serious disorder, as we know.
Again, the court combed through
statements in the specification and found some
statements in the specification that the compound in
10 question had marked superiority and a better side
11 effects profile and some higher activity --
12 completely boilerplate and standard language in
13 patents, for reasons that have been explained and
14 that I can explain further. My point is you wouldn't
15 see that kind of scrutiny of the detailed statements
16 in the written description portion when the proof of
7 operability was so straightforward, as it was in this
18 case where animal studies, and some prior studies had
19 shown clearly that olanzapine was effective.
20
In fact, olanzapine was selected from
21 a broad -- very broad -- genus patent, which is sort
22 of the Granddaddy in this area of so-called tricyclic
23 compounds, which were found to have significant
24 neurobiological impact. That was the patent that was
25 expired and is in a sense off-stage in the olanzapine
www.dianaburden.com

| 1297 | 1298 |
| :---: | :---: |
| 1 Transco Products case was a case about an insulating 2 wrap that was used inside of a nuclear power plant, 3 so very, very high temperature environment -- <br> THE PRESIDENT: You are in injury time. I will give you two extra minutes. <br> PROFESSOR MERGES: Thank you very much. I must have earned some extra time. <br> So this is a patent on a wrap that 9 goes around pipes in a nuclear reactor, and in order 10 to keep the wrap on the pipes they use Velcro <br> 11 closures, and the claim specified that the hook and <br> 12 loop or closure mechanism had to be made of nylon. <br> 13 The accused infringer said it's a high temperature <br> 14 environment, regular standard off-the-shelf Velcro is <br> 15 going to melt, and they said therefore it doesn't <br> 16 have any utility. And what the court held was that <br> 17 this kind of long-term effectiveness, that it has to <br> 18 last a long time and not melt, that's not required. <br> 19 The closures will hold that fiberglass wrap on the <br> 20 pipes without any problem, and there's nothing that <br> 21 requires long-term efficacy for the life of the <br> 22 nuclear power plant or anything that extreme. <br> 23 <br> So it's a very straightorward test, <br> 24 workability and operability, and the cases are very <br> 25 clear. | In the FDA approval context you don't <br> have to show that your drug is actually ready to be put in bottles and given to patients by the millions. There are important policy reasons why we wouldn't want to set the utility standard that stringently. We wouldn't want to set utility at a level that <br> requires that much proof, and I'm sure I can work that into my answers on cross. <br> So let me just end by saying utility <br> in the U.S. is a very low bar; we focus on the <br> claimed invention, and we just ask whether it's <br> workable. The promise utility doctrine, whatever it <br> is, is very different from that. <br> MS. CHEEK: I do have a few questions for Professor Merges on direct. <br> THE PRESIDENT: Please proceed. <br> direct examination on behalf of the claimant <br> MS. CHEEK: In his Second Report <br> Professor Holbrook contends that the U.S. doctrines <br> of utility, enablement and written description are <br> 21 closely related and "often rise or fall together" <br> 22 (paragraph 25 of Professor Holbrook's report.) What <br> 23 is your reaction to Professor Holbrook's claim that <br> 24 these doctrines often "rise and fall together"? <br> 25 <br> PROFESSOR MERGES: \| really just don't |

1 think there's any support for that because the
2 studies that we see, for example in that
3 Allison/Lemley study from the American Intellectual
4 Property Law Association quarterly journal, again,
5 one patent in that study out of 239 cases was
6 invalidated for lack of utility. The figure for
7 enablement and written description escapes me but I
8 can guarantee it was much higher.
9
In a subsequent study that Lemley,
10 Allison and I think a third co-author published just
11 last year in the University of Chicago or somewhere,
12 some study I saw, I think the general going rate is
13 that about 20 percent of cases where enablement and
14 written description are argued end up in
15 invalidations. So you have .41 percent of cases in
16 one study and 20 percent or so in others, and just in
17 terms of, I think, our common sense notion, in my
18 patent class I teach one day on utility and it's a
19 very straightforward test. I make a couple of 20 points.
21 Written description enablement is a
22 four or five-day marathon with all kinds of
23 complexities to it, so I just disagree with that.
24 Ms. CHEEK: In Professor Holbrook's
25 Second Report, he discusses a new case, In re Glass,
www.dianaburden.com
which is R-395, and is also at tab 5 of the direct
binder, although I know you're familiar with the
3 case. Professor Holbrook discussed this case at
4 paragraphs 40 and 41 of his report.
5 In particular, Professor Holbrook says
In re Glass is "a clear example of where the U.S. PTO
and Court refused to look at post-filing evidence."
As to the admissibility of post-filing evidence, what is your view of In re Glass?

PROFESSOR MERGES: Well, In re Glass
is an enablement case, so it's not really relevant to utility. It's on a different topic.

MS. CHEEK: Professor Merges, during
this hearing witnesses have discussed utility and
non-obviousness and the relationship, if any, between
the two. Are utility and non-obviousness
requirements related in the United States?
PROFESSOR MERGES: No. Again, to use
18
19 that visual metaphor, they're very different hurdles
20 in the race and they're completely conceptually
21 independent. Non-obviousness has to do with how
22 significant your invention was compared to the prior
23 art, whether you have presented an invention that's
24 essentially non-trivial, and utility just has to do
25 with whether or not your invention works. So, again,
www.dianaburden.com
www.dianaburden.com
1 there are many inventions that work but which are
2 completely anticipated or obvious in light of the
completely anticipated or obvious in light of the
prior art. They're very different requirements.
MS. CHEEK: Under U.S. law, if a
patentee asserts an advantage related to
non-obviousness, does that have any bearing on the
utility of the invention?
PROFESSOR MERGES: No. There are a
number of situations where an inventor might describe
some advantages of an invention, and there are a
number of reasons why they might do so. One of the
topics that's been under discussion is the question
of selection patents and the discussion of
advantages, and in the selection patent context it's
important to know that if the advantages, or even the
6 lack of disadvantages, are not apparent or obvious to
somebody skilled in the art, then that's a good ground for arguing that your selection patent is non-obvious. In other words, if you select a species out of a broad genus, it is sometimes very helpful to say in your specification -- that is to say in the
22 written description part of your patent, not the
23 claims -- it's sometimes helpful to say that this
24 species has or is expected to have some advantageous properties, and that can lay the foundation for an
argument that that selection of that particular
species is non-obvious and is an improvement, even
3 though it's a member of a prior disclosed and patented genus.

That would be an example of where a
statement of advantageous features would be made for
purposes of non-obviousness. Again, those statements
are irrelevant from the point of view of utility.
Utility is measured by the claimed invention, not by
statements about features and qualities that you
might make in the written description. Is the
claimed invention operable? Does it work? That's
very different from there may be some advantages of
14 this species chosen out from this broad class. Those
15 are two completely different things.
MS. CHEEK: Professor Merges,
16
17 Professor Holbrook in his Second Report at paragraphs
1845 to 47 discusses two U.S. cases. One is Alice $v$
19 CLS Bank, which is R-108. The other is Ariad v
20 Lilly, which is R-99. Professor Holbrook says that
21 your reports ignore the "dramatic impact" of these
22 two cases and that in his view, these two cases,
23 Alice and Ariad represent "significant changes" to
24 U.S. patent law. I'd like to ask for your view on
25 each of those cases. In the first instance do you

1 agree with Professor Holbrook that Ariad v Lilly,
2 which is R-99, had a dramatic impact on U.S. patent
3 law?
4 PROFESSOR MERGES: The Ariad case
5 confirmed that section 112, disclosure requirement in
6 the U.S, has a separate component called "written
7 description" but that was a body of law that had been
8 developing for some years and Ariad just confirmed,
9 yes, this is a part of the statute. I don't think
10 that that represented anything like a dramatic
11 change.
12
How would you know? Again, look at 13 outcomes. Many cases that are decided after Ariad
14 might cite the written description requirement to
15 invalidate a patent, but those same cases probably
16 would have cited the enablement requirement before
17 the Ariad case. So we've moved a little among
18 doctrinal headings and that, of course, has an impact 19 to some degree on practitioners, who may have to
20 couch their arguments differently.
21 But what's the bottom line? How do
22 you tell if an area of law has changed? Outcomes.
23 Have they radically changed after Ariad? I don't
24 think so. The other was CLS Bank v Alice?
25
MS. CHEEK: Yes. I'll just go ahead
www.dianaburden.com

| www.dianaburden.com |
| :--- |
|  |
| 1 that changes the law, but I'm just not ready to say |
| 2 that it's been a big shift as of today. |

2 that it's been a big shift as of today.
MS. CHEEK: In Professor Holbrook's
Second Report at paragraphs $13-22$ he addresses the
reduction to practice requirement in U.S. law, and in
particular Professor Holbrook says at paragraph 13
that "reduction to practice requires demonstration
that an invention works," and then he goes on in
paragraph 19 and says, "Under Professor Merges' view
of the law, no such proof that the invention actually
worked would ever be required. The requirement for
reduction to practice shows he is wrong."
In your view, Professor Merges, is
that a fair description of the U.S. reduction to practice rule?
16
17 practice, again, is about a very, very different
18 topic from the one that brings us here. It comes up
19 in a situation where you have two inventors, both of
20 whom have invented the same thing at more or less the
21 same time, and under the U.S. patent system, until
22 very recently, we had a priority rule that said the
23 first person to invent gets the patent. Now, it
24 turns out that invention is not a discrete event.
25 There's no Eureka moment at which the invention comes

1 and ask you a question on that as well. Do you agree
2 with Professor Holbrook that the Alice v CLS Bank
3 case had a dramatic impact on U.S. patent law?
4
5 it's important to say that the Alice case just came
6 down just about two years ago now, in 2014, and
7 that's not really enough time to judge dramatic
8 impact. The Alice case was I'll certainly say
9 noteworthy. The Alice case was an important case,
10 but I just don't think we have enough data. Now, the
11 early cases, post Alice, that applied that case and
12 its holding very strictly -- and, by the way, it was
13 a case about business methods or software. It was a
14 case about can you patent stuff like that. Can you
15 get a patent on a business method. Can you get a
16 patent on a business method as implemented in a
17 computer program. So that was the topic.
18 The cases that came out immediately
19 after seemed to apply that case and its holding very
20 rigorously, so there was a little bit of concern.
21 Wow, what's happening? But we've had some more
22 recent cases that push back against it and, as a
23 result, it's a little hard to say how things have
24 really changed and shaken out. I think there's a
25 scenario under which Alice might be an important case
www.dianaburden.com

1 into being, so we break it down into stages.
2 Typically we talk about conception and then reduction
3 to practice. Then we have filing of a patent,
4 typically.
5 When you break it down into those
6 stages and you're fighting about patent priority, if
7 you are relying on an argument that involves
8 reduction to practice you do have to show that you
9 actually built an embodiment, but that's driven by
10 the requirement of that body of law. And, by the
11 way, there are two ways that you can meet the
12 reduction to practice requirement. One is that you
13 can show, with credible evidence from data,
14 supporting affidavits, witnesses, et cetera, "Yes, I
15 actually built the thing on date X."
16 The other way is you can show that "l
17 wrote up a fully enabling patent application and
18 filed it on date $X$," and that we call constructive
19 reduction to practice. So in the very doctrine
20 itself that we're talking about, it belies the idea
21 that you need to actually build something because
22 constructive reduction to practice doesn't require
23 that. A fully enabling patent application is the
24 logical equivalent of a built structure under patent
25 law. As a result, even within that doctrine it's not

| 1 FCA 220 (2011) (Exhibit C-163). You see that? | 1 U.S. patent law, so I'm not sure the relevance of |
| :---: | :---: |
| 2 PROFESSOR MERGES: Yes. | 2 your line of questioning. |
| 3 MR. LUZ: Other than those three court | 3 MR. LUZ: I'm just trying to establish |
| 4 judgments, do you cite any other Canadian patent law | 4 there's no explanation in his expert reports of where |
| 5 judgments in either of your expert reports? | 5 he got his understanding of Canadian law other than |
| 6 PROFESSOR MERGES: What do you mean by | 6 the three judgments. I'm trying to establish what |
| 7 "patent law judgments"? | 7 that comes from. We don't have to go through his |
| 8 MR. LUZ: Any Canadian court judgments | 8 expert reports because I can confirm that there are |
| 9 other than the three that we just referred to? I | 9 no Canadian case law sources or academic texts in |
| 10 could rephrase it. Is it not true that there are no | 10 either one. |
| 11 other Canadian case law judgments cited in either one | 11 THE PRESIDENT: It makes the |
| 12 of your reports? | 12 comparison. Overruled. You have to answer the |
| 13 PROFESSOR MERGES: Let's take a quick | 13 question, Professor. |
| 14 flip through to make sure. | 14 MR. LUZ: You don't cite any Canadian |
| 15 MR. LUZ: It may take a little while | 15 patent law, academic texts or books in either one of |
| 16 to look through, but I was unable to find any. And | 16 your reports, do you? |
| 17 if you don't recall any? | 17 PROFESSOR MERGES: Not that I |
| 18 PROFESSOR MERGES: I don't recall any. | 18 remember. I don't think so. |
| 19 That's why I was looking. | 19 Mr. LUZ: And you don't even cite the |
| 20 MR. LUZ: Then I'll also rephrase this | 20 Canadian Patent Act in either one of your reports, do |
| 21 in the form of a question. Do you cite any other | 21 you? |
| 22 Canadian patent law academic articles or books in | 22 PROFESSOR MERGES: It's cited in the |
| 23 either of your expert reports? | 23 cases that I read. |
| 24 MS. CHEEK: Excuse me, Mr. President. | 24 MR. LUZ: And did you read any of the |
| 25 We've put forward Professor Merges as an expert on | 25 cases that were cited in the three judgments that you |
| www.dianaburden.com | www.dianaburden.com |
| 1313 | 1314 |
| 1 read? | 1 and what I read in the cases characterizing it as the |
| 2 PROFESSOR MERGES: I certainly read | 2 promise utility doctrine. |
| 3 the counterpart cases in the U.S, read the patents, | 3 MR. LUZ: I'm sorry, I didn't |
| 4 some of the studies that were cited in the patents. | 4 understand that. You don't offer an opinion as to |
| $5 \quad$ MR. LUZ: But at this time you don't | 5 the timing of the emergence of the promise utility |
| 6 recall reading any of those cases from your | 6 doctrine in Canadian jurisprudence, do you? |
| 7 recollection? | 7 PROFESSOR MERGES: The precise date on |
| 8 PROFESSOR MERGES: I'm trying to | 8 which the promise utility doctrine was born or |
| 9 remember. I certainly haven't made an extensive | 9 created? That's what you're asking? |
| 10 canvass of Canadian cases, but I read the cases in | 10 MR. LUZ: Right. |
| 11 front of me carefully. | 11 PROFESSOR MERGES: The answer to that |
| 12 MR. LUZ: Thank you. | 12 is no. |
| 13 In your reports you don't give your | 13 MR. LUZ: And you don't give your |
| 14 personal opinion as to the timing of when the | 14 personal opinion as to whether or not the promise |
| 15 Canadian promise utility doctrine, as it is called, | 15 doctrine is grounded in Canadian jurisprudence or |
| 16 emerged in Canadian law, do you? | 16 patent law scholarship? |
| 17 PROFESSOR MERGES: So what do you mean | 17 PROFESSOR MERGES: Most of my |
| 18 exactly by "timing"? | 18 statements are about the soundness of doctrine |
| 19 MR. LUZ: As to whether or not -- you | 19 per se. |
| 20 don't make any -- you don't offer an opinion as to | 20 Mr. LUZ: So the answer to my last |
| 21 whether or not the promise utility doctrine is new, | 21 question is no? |
| 22 old, you give no view on its timing and emergence in | 22 PROFESSOR MERGES: Yes, I did not |
| 23 Canadian law? | 23 canvass Canadian academic works or secondary |
| 24 PROFESSOR MERGES: The contrast is | 24 authorities. I just applied the traditional, classic |
| 25 between traditional accepted principles of utility | 25 rule of utility and compared it to what I read in the |
| www.dianaburden.com | www.dianaburden.com |

| 1 | Canadian cases. |
| :---: | :---: |
| 2 | MR. LUZ: The traditional, classic |
| 3 | rule of utility as understood in the United States? |
| 4 | PROFESSOR MERGES: As understood |
| 5 | worldwide, as evidenced by the fact, for example, |
| 6 | that the olanzapine patent was filed in 81 |
| 7 | jurisdictions and there was only one out of 81 that |
| 8 | had a problem with utility. |
| 9 | MR. LUZ: You're appearing here as an |
| 10 | expert on United States law. IS that right? |
| 11 | PROFESSOR MERGES: Yes. |
| 12 | MR. LUZ: Not Canadian law? |
| 13 | $\quad$ PROFESSOR MERGES: In my role I felt |
| 14 | it necessary to make comparative points between U.S. |
| 15 | law and some Canadian cases. |
| 16 | MR. LUZ: I'll ask the question again. |
| 17 | You're appearing here as an expert on U.S. law and |
| 18 | not Canadian law? |
| 19 | PROFESSOR MERGES: That is my role, an |
| 20 | expert on U.S. law. |
| 21 | MR. LUZ: And you're appearing here as |
| 22 | an expert on U.S. law, not on international law? |
| 23 | THE PRESIDENT: Mr. Luz, it is not |
| 24 | international law but comparative law. That's the |
| 25 | question. |

```
MR. LUZ: Yes, or I could correct it to say public international law.
THE PRESIDENT: If you go in that direction, then we are in another field now.
MR. LUZ: I'll move on from this.
Could you get your First Report and go to paragraph 10? Do you have it there?
PROFESSOR MERGES: Yes.
MR. LUZ: So under the heading "U.S. Patentability Requirements" you say that "An
invention must be useful, novel and non-obvious to qualify for a U.S. patent." You see that, right?
PROFESSOR MERGES: Yes. Sentence 1,
paragraph 10.
MR. LUZ: You refer to 35 U.S.C
sections 101, 102, 103. Those are the relevant
sections of the U.S. Patent Act, U.S. Code?
PROFESSOR MERGES: Yes.
MR. LUZ: In the second sentence you
say, "It must also be adequately disclosed." Section
12. I think that's what you referred to earlier this
22 morning as to enablement and written description requirements?
24
25 section 112.
PROFESSOR MERGES: The proper cite is
```

www.dianaburden.com

MR. LUZ: Sorry, did I not say that? PROFESSOR MERGES: Maybe I misheard.
MR. LUZ: I apologize. Section 112.
I want to come back to specific parts
of the patentability requirements in a moment, but
let's step back for a second to talk about basic
nature of patent rights. The Patent Office in the
United States gets tens of thousands of patent
applications every year, right?
PROFESSOR MERGES: Yes, hundreds of
thousands.
MR. LUZ: So examiners only have
limited time and resources to expect those patent
applications. Is that right?
PROFESSOR MERGES: Yes.
MR. LUZ: So when a patent is issued,
there's a statutory presumption of validity. Is that right?

PROFESSOR MERGES: Yes.
MR. LUZ: And patentees know that, if
21 the patent is challenged later on in litigation, a
22 court may declare the patent to be invalid. Is that 23 right?
24 25
infringement in the statute.
MR. LUZ: So, even though a patent has
been issued and it is presumed valid, if a court
finds that it does not meet the various requirements
that we discussed -- enablement, written description,
utility -- it can be declared invalid by a court?
PROFESSOR MERGES: Yes.
MR. LUZ: So the question of ultimate validity or invalidity is determined by a court?

PROFESSOR MERGES: That's not quite
accurate.
MR. LUZ: How so, if you can clarify?
PROFESSOR MERGES: When you say "the
13
14 ultimate," one interpretation of that is the last in
15 time, and for many patent applications the examiner's
16 decision is the ultimate decision because the
17 applicant decides not to pursue the case further. In
18 a second set of cases, the applicant decides to
19 appeal the examiner's rejection, and so in those
20 cases the ultimate decision might be an
21 administrative tribunal called the Patent Trial and
22 Appeal Board, and in yet a third class of cases an
23 already issued patent can be submitted to the same
24 administrative court under an administrative
25 procedure called an inter partes review, and under
that procedure the patent can be declared invalid.
2 So there are a number of ways that the "ultimate"
3 decision on validity will fall to an organization
4 other than the court.
5 MR. LUZ: You once wrote and described
6 the uncertainty regarding patent rights in the
7 following way: that all patents are probabilistic
rights until the last court has spoken. Do you remember writing that?
10 point me to that reference. It rings a bell but that one's not coming to mind.

MR. LUZ: Page 5 of your first Expert
Report. Do you have it there?
PROFESSOR MERGES: Yes.
MR. LUZ: Look at paragraph 8.
There's an article cited to yourself along with some
of your co-authors titled High Technology
Entrepreneurs and the Patent System. That's C-270.
20 It's tab 6 in your binder. It's a 2009 article of
21 yours. If you turn page 1315.
22
23
professor merges: Yes, 1315.
MR. LUZ: Under the heading
"Technology entrepreneurs must reckon with patents
25 held by others," the last paragraph there where it
www.dianaburden.com

| 1321 | 1322 |
| :---: | :---: |
| 1 court reporters didn't catch it. | 1 to in just a second. Mark Lemley is one of your |
| 2 PROFESSOR MERGES: Okay. I was | 2 co-authors of a book that you wrote, Intellectual |
| 3 referring to the fact that this is a paragraph about | 3 Property in the New Technological Age? |
| 4 a particular set of accusations. It's about a | 4 PROFESSOR MERGES: That's one of the |
| 5 particular type of patent litigation here, so we're | 5 books we co-authored. There's two others. |
| 6 talking here about a situation where a start-up | 6 Mr. LUZ: So, just before we get to |
| 7 company might confront a patent litigation typically | 7 that article and probabilistic rights until the last |
| 8 early in its history, and as part of our survey we | 8 court has spoken, let me put to you a few questions. |
| 9 wanted to know what the experience of the survey | 9 Most patents are never ultimately litigated. Is that |
| 10 companies was in that context, so it's important to | 10 right? Thousands are issued -- tens of thousands are |
| 11 give that because this is not a blanket discussion of | 11 issued every year. Most of them never end up in |
| 12 all patent litigation. It's a subset of cases | 12 court. |
| 13 involving one subset of patentees. So the patentee | 13 PROFESSOR MERGES: True. |
| 14 subset is start-up companies and the subset of cases | 14 MR. LUZ: And litigation is more |
| 15 is cases where the start-ups have been threatened | 15 likely when a patent is commercially valuable, right? |
| 16 with a patent, typically from a big incumbent, you | 16 There's not much point in going to litigation unless |
| 17 know, an existing company. Sol just wanted to give | 17 there's high stakes involved. |
| 18 that as context here. | 18 PROFESSOR MERGES: That's not |
| 19 Mr. LUZ: So when you write that all | 19 completely true. There are multiple reasons why |
| 20 probabilistic patents -- | 20 companies engage in patent litigation. |
| 21 THE PRESIDENT: All patents. | 21 Unfortunately, sometimes the patents are not |
| 22 Mr. LUZ: Sorry, "All patents are | 22 particularly valuable. They may be initiating |
| 23 probabilistic rights until the last court has spoken" | 23 litigation simply to try to negotiate a settlement |
| 24 and you cite to an article by Mark Lemley and | 24 and, in fact, the patents are not very valuable. |
| 25 Carl Shapiro probabilistic patents, which we will get | 25 They may be using patent litigation for strategic |
| www.dianaburden.com | www.dianaburden.com |

purposes to slow down a new entrant or to sort of
2 harass a competitor. There's a lot of different 3 scenarios under which patents are litigated.
$4 \quad$ MR. LUZ: But if it does make it all 5 the way to litigation and the parties don't settle,
6 either on the courthouse steps or beforehand, the
7 risk that a patent will be declared invalid is
8 substantial, isn't it?
$9 \quad$ PROFESSOR MERGES: That really depends 10 on the case. For example, in a situation where a
11 patent has already been validated and challenged in
12 an administrative tribunal, there's a very strong
13 sense that that patent is going to be very hard to
14 invalidate. There are also patents that have been
15 tested in prior litigation and survived a number of
16 invalidity challenges. So it's a very, very fact
specific inquiry when you're asking what is the risk
18 of a particular patent invalidation. It's very 19 specific.
20 MR. LUZ: Before we get to that
21 article I just want to pick up on something you just
22 said. You said that -- I'm sorry, that at the
23 Patent Office inter partes review, if a patent is --
24 I don't think you said declared invalid, but --
25
PROFESSOR MERGES: I was making the
www.dianaburden.com
www.dianaburden.com
1 commercial significance." It goes on to give a
couple of examples including the U.S. Court of
Appeals for the Federal Circuit invalidation of Eli Lilly's patent on Prozac in 2000.

The second paragraph starts off with:
"Virtually all property rights contain some element
of uncertainty." Then halfway through the paragraph,
so we don't have to bore everyone with the whole
thing, "But the uncertainty associated with patents
is especially striking, and indeed is fundamental to
understanding the effects of patents on innovation and competition." You see that?

PROFESSOR MERGES: Yes, I see that
13
14 sentence.
15 MR. LUZ: Then at the bottom of that
16 same paragraph: "Uncertainty about validity and
17 scope are critical when studying the enforcement and
18 litigation of patents."
19 If you flip down to the last page of
20 that article, which is page 95, the Conclusion, you
21 see that under the heading "Conclusion"?
22
23
24 ask you some questions about it. "The patent system
25 does not grant an absolute right to inventors to

1 exclude others from practicing their inventions, as
2 many economic models assume. Rather, the patent
system gives the patent holder a right to try to
exclude others by asserting its patent against them
in court. The actual scope of a patent right, and
even whether the right will withstand litigation at
all, are uncertain and contingent questions. This
uncertainty is not an accident or mistake. Rather,
it is an inherent part of our patent system, an
accommodation to the hundreds of thousands of patent
applications filed each year, the inability of third
parties to participate effectively in determining
whether a patent should issue, and the fact that for
the vast majority of issued patents, scope and
5 validity are of little or no commercial
significance."
So when you wrote "all" -- I don't
want to misquote -- "all patents are probabilistic
rights until the last court has spoken," I think this
20 is what you mean. You get a presumption of validity
21 when you get your patent. Is that right?

23 that, yes.
PROFESSOR MERGES: I think we covered
MR. LUZ: But you don't have an
assurance of validity?

| 1 PROFESSOR MERGES: If I get the | 1 all patentees. The upshot of that is that in a sense |
| :---: | :---: |
| 2 question right, you mean when the patent is issued? | 2 that's one risk that patentees do not assume, the |
| 3 MR. LUZ: That's right. | 3 risk of a radical change that goes to the level of a |
| 4 PROFESSOR MERGES: This is the moment | 4 taking. |
| 5 of issuance? | 5 So, just to be clear, that's an |
| 6 MR. LUZ: Right. | 6 example where your legitimate, as they say, |
| 7 PROFESSOR MERGES: There's no | 7 investment-backed expectations would be recognized by |
| 8 guarantee. | 8 the law. So I think the broader point is that it's |
| 9 Mr. LUZ: And there's also no | 9 not the case that all patents are fraught with |
| 10 guarantee that over the course of the life of the | 10 massive risk of legal change and it's just a complete |
| 11 patent the laws are not going to develop over the | 11 crap shoot. That's kind of what you're saying and I |
| 12 course of the life of that patent. Is that right? | 12 wouldn't go that far. |
| 13 PROFESSOR MERGES: I wouldn't quite go | 13 MR. LUZ: You said under takings |
| 14 that far. | 14 jurisprudence it's possible to argue. Has there ever |
| 15 MR. LUZ: Let's talk about -- | 15 been a case in the United States where an invalidated |
| 16 PROFESSOR MERGES: I can give you an | 16 patent -- the U.S. government has been ordered to pay |
| 17 example? | 17 compensation under the U.S. takings clause? |
| 18 MR. LUZ: Sure, go ahead. | 18 PROFESSOR MERGES: There have been |
| 19 PROFESSOR MERGES: Just, for example, | 19 some cases involving seizures of patents in the old |
| 20 under our takings jurisprudence, under the 5th | 20 days, and there's a case not too long ago involving |
| 21 Amendment of our Constitution, it is possible to | 21 the mandated disclosure of a trade secret which said |
| 22 argue that an extremely radical change in patent | 22 that the trade secret has the status of property, and |
| 23 doctrine would amount to what's known as a regulatory | 23 so a lot of scholars assume that if a trade secret is |
| 24 taking, and that would be a kind of significant | 24 considered property by the Supreme Court, then |
| 25 change in the law which would require compensation to | 25 certainly a patent which is named as a property right |
| www.dianaburden.com | www.dianaburden.com |
| 1329 | 1330 |
| 1 in the patent statute says it shall have the | 1 Turn to page 209, the second |
| 2 attributes of personal property. That would surely | 2 paragraph. Can you read that second paragraph? |
| 3 be treated as a property right. So possibly by | 3 PROFESSOR MERGES: -- I never read my |
| 4 extension. | 4 book while l'm teaching, by the way. |
| $5 \quad$ MR. LUZ: But has there been a case | 5 MR. LUZ: I'm happy to read it. I |
| 6 that a court has invalidated a patent and the U.S. | 6 don't want you to get bored listening to me ask |
| 7 government has been order ed to pay compensation under | 7 questions. |
| 8 the takings clause because of the judicial | 8 PROFESSOR MERGES: I think it might |
| 9 invalidation of a patent? | 9 have a dramatic flourish. "Two statutory provisions |
| 10 PROFESSOR MERGES: I think it would | 10 form the basis for the utility requirement. The |
| 11 take a really significant change in the law for that | 11 first is section 101 which, as discussed in Chapter |
| 12 to happen. Something along the lines of increasing | 12 2, descends directly from language authored by Thomas |
| 13 invalidity from zero percent to 40 percent in some | 13 Jefferson and enacted into law in 1793. Section 101 |
| 14 category. Something really significant like that. | 14 explicitly requires that inventions be 'useful' in |
| 15 MR. LUZ: Thank you. You talked in | 15 order to receive patent protection. The second |
| 16 your opening presentation about the common law | 16 statutory basis is section 112 which requires a |
| 17 tradition in patent law. You did talk about it for | 17 patent applicant to disclose 'the manner and process |
| 18 utility and I think you were probably inspired by | 18 of making and using (the invention)'. Thus, the |
| 19 your textbook which you cite a few times in your | 19 utility requirement is founded upon a mere two words |
| 20 Expert Report. Let's take a look at tab 7 of your | 20 in the statute. [useful and using] As with |
| 21 binder. I should just note for the record the pages | 21 patentable subject matter, the law of utility has |
| 22 are from CE-272 and R-56. Both parties liked your | 22 been developed largely by the courts in a common law |
| 23 textbook so much that we both cited different pages, | 23 fashion, without detailed guidance from Congress." |
| 24 so just for convenience in the binder we have merged | 24 MR. LUZ: Thank you. I'll come back |
| 25 them together. | 25 to utility in section 101 and 112 in a second but |
| www.dianaburden.com | www.dianaburden.com |

2 you said this morning, patent law generally has
3 developed largely by the courts in a common law
4 fashion -- you say the common law tradition in
5 developing patent law, that means judicial precedent
6 develops over years, decades and so on based on
7 accumulating cases that appear before the courts. Is
8 that right? Is that what you mean?
$9 \quad$ PROFESSOR MERGES: As the common law
10 rule, the stable rule, is applied to new fact
11 situations, we have common law development.
12
MR. LUZ: So sometimes judicial 13 interpretations can be developed slowly -- slowly or
14 more rapidly depending on the volume of cases that
15 come before the courts, the type of cases, the
16 specific issues before the courts. Is that right?
17 PROFESSOR MERGES: I just didn't quite
18 catch the first -- judicial something? I missed it.
19 MR. LUZ: Case law can develop
20 sometimes slowly, sometimes quickly depending on the
21 kinds of cases that are coming before the courts.
22 Would you agree with that?
23
PROFESSOR MERGES: Yes. The volume of
24 case law can vary in particular doctrinal areas,
25 given external developments.
www.dianaburden.com

9 source for that?
10 textbook. Tab 7.
12
13
14 note again it's Exhibit C-272 and R-56. Just before
15 we go through this, written description manifests
16 itself when patent applicants amend their
17 specifications adding new distinctions to narrow 18 their claims, right?
19 PROFESSOR MERGES: No.
$20 \quad$ MR. LUZ: It might come into play when 21 you claim too broadly?
22 PROFESSOR MERGES: That's more
23 accurate. The correction is it doesn't apply only
24 when you amend your claims.
25
MR. LUZ: Understood.
www.dianaburden.com

1 MR. LUZ: And, as is the common law 2 tradition, courts look back to their jurisprudence,
3 sometimes recent jurisprudence, sometimes old
4 jurisprudence, to develop the law. Is that right?
5 PROFESSOR MERGES: Certainly they
6 sometimes cite older cases to apply the basic rules
7 to new facts, I would say that.
$8 \quad$ MR. LUZ: You talked about the written
9 description requirement in your opening presentation
10 this morning, so let's go to that because I think
11 that's a good example of the common law tradition
12 developing. Turn to paragraph 15 of your first
13 Expert Report. Do you have it?
14
PROFESSOR MERGES: I'm getting there.
15 Yes.
16
17 "Section 112 MR. LUL: Paragraph 15 starts off with
"Section 112(a) ensures adequate disclosure of an
18 invention. It contains two distinct requirements,
19 enablement and written description." You see that?
20 PROFESSOR MERGES: Yes.
21 MR. LUZ: But the view that
22 section 112 contains a written description
23 requirement that is separate and distinct from
24 enablement is a new development in U.S. case law,
25 isn't it?
www.dianaburden.com

## 1333

So, starting at page 291, you start
2 off here that "The idea of a more rigorous written
3 description doctrine" -- and we'll put this into
4 place, into context, just as we read, so just bear
5 with me for a moment because I'll read something,
6 then I'll ask you to read something, then I'll ask
7 you some questions based on what you've written here
8 -- "The idea of a more rigorous written description
9 doctrine seems to have taken root in a judicial
10 desire to rein in the free and easy ways of patent
11 drafters. The particular object of the judges'
12 displeasure was amendment practice. Patent lawyers
13 are adept at filing a patent application that broadly
14 (if sometimes vaguely) describes an invention but
15 that also includes many possible permutations of the
16 general invention."
17 Let's skip down to the last paragraph
18 on that page. It says, "This type of practice is a
19 standard... gamesmanship that lawyers have long
20 tried. When the competitor's product is particularly
21 innovative compared to the originally claimed
22 invention, this practice may be described as
23 'misappropriation by amendment'." And you cite an
24 article that you wrote. The next sentence, "The
25 practice could be curtailed." Do you mind reading
from that point, "the practice could be curtailed," and over to 292 until the paragraph ends?
3 MS. CHEEK: Excuse me, Mr. President.
4 Certainly Mr. Luz has every right to establish the
5 foundation for his questions but since he's the
6 question asker, perhaps we wouldn't need to have
7 Mr . Merges be the reader.
$8 \quad$ MR. LUZ: I'm happy to read it.
9 THE PRESIDENT: Sustained. If you
10 need more time to read your own work, please say so.
11 PROFESSOR MERGES: Did you ask me
12 whether I need more time to read it?
13 THE PRESIDENT: Yes, and read it in
14 context, if you want to read pages 291, 292. You
15 don't need to read it aloud.
16 PROFESSOR MERGES: Okay.
17 MR. LUZ: I'm happy to read it.
18 THE PRESIDENT: No, it's not 19 necessary. We can read, too.
20 MR. LUZ: No, I'll read it and then
21 I'll ask you some questions about --
22 THE PRESIDENT: Professor Merges, have 23 you had sufficient time to refamiliarize yourself
24 with what you wrote?
25
PROFESSOR MERGES: Not quite.
www.dianaburden.com
www.dianaburden.com

1 in the attic where the courts root around for
2 doctrines. It's just a figure of speech you're
3
4
4

5 the answer to that. It's something referred to as a
6 metaphor. Some writers use them, some don't.
7
court had other options to deal with the problem that
they faced -- to deal with claim amendments and
overbroad claims. They could have dealt with
enablement or obviousness but, instead, they -- as
you used the metaphor -- came up with an overlooked
gem from old and discarded doctrines. Is that right?
So the court had options, different ways of dealing with the problem that they faced.

PROFESSOR MERGES: Yes. I'm talking
16
17 about how they chose, as I say, to attack this 18 practice
19
20
2 that, "Early cases reveal a certain amount of
21 judicial trepidation over the doctrine." You go on
22 to write, "The written description holding was often
23 stated almost in the alternative, with the
24 aforementioned new matter rule, or traditional
25 enablement requirement, bearing at least part of the

1 THE PRESIDENT: Please take your time.
2 PROFESSOR MERGES: Okay, because this
3 is a long chapter here.
4 THE PRESIDENT: Simply start for
5 yourself to read 291 and go to 292, and then, I
6 suggest, Mr. Luz you ask your question. Tell us when 7 you are finished, Professor Merges. (Pause)
8 PROFESSOR MERGES: Okay. I'm there.
$9 \quad$ MR. LUZ: I'll read this last part and
10 then I'll ask you some questions about this. "The
11 practice" -- and we're referring to misappropriation
12 by amendment -- "The practice could be curtailed by
13 adjustments to a number of different patent
14 doctrines, including imposing a more rigorous
15 non-obviousness requirement, demanding a greater
16 degree of enablement and interpreting claims more
17 narrowly. Nevertheless, although the Federal Circuit
18 seems to have been bothered by the misappropriation
19 by amendment practice, the court did not attack the
20 practice with the obviousness, enablement or
21 infringement doctrines. Instead, the court rooted
22 around in the treasure chest of minor and discarded
23 doctrines and came up with what it thought was an
24 overlooked gem." So the first obvious question is
25 there's not actually a treasure chest of doctrine up
www.dianaburden.com

1 decisional weight. And almost every opinion relying
2 on written description requirement elicited a
3 strenuous dissent emphasizing either the
4 requirement's redundancy or its lack of clarity... It
5 is therefore no surprise that the written description
6 requirement, having met with a cool reception, had
7 faded almost completely from subsequent decisions in
8 the late '70s and 1980s."
$9 \quad$ You go on: "Not for good, however.
10 Beginning in the late 1990s, the Federal Circuit
11 resuscitated the doctrine. First sparingly, and with
12 increasing frequency as of late, the court has
13 pointedly deployed 'written description' as an
14 independent, and often very stiff, requirement."
15 As you alluded to there is long case
16 history but it had disappeared for a number of
17 decades and only re-emerged in the late 1990s. Is
18 that right?
19 PROFESSOR MERGES: When you say "long"
20 now, the first citation on 292 is to a case from
211971.

22 MR. LUZ: But again, it had -- as a
23 separate requirement from enablement, distinct from
24 enablement, that is a recent development in U.S. law?
25
PROFESSOR MERGES: I wouldn't quite go

2 of it. The article I cite by Professor Mark Janis at
3 the top of 291 talks about its "humble" origins, and
4 in that line of work he and others had traced back to
5 some of its, you might say, early glimmerings, I 6 would say.
7 MR. LUZ: Can you turn to tab 14? 8 PROFESSOR MERGES: Could I add one 9 point about page 292? I said there that "as of late"
10 it's become a very stiff requirement, and I was
11 referring of course to cases right about the time
12 that I was writing this, what I would call sort of
13 one of these minor perturbations. The ultimate test
14 always is outcomes, and the incidence of invalidity
15 under section 112 has not changed fundamentally since
16 the written description doctrine has been talked
17 about more. I just want to make that clear.
18
MR. LUZ: Turn to tab 14, Exhibit
19 R-120. This is a book by Janice Mueller, Patent Law.
20 Page 153, Federal Circuit's Expansion of the Written
21 Description Requirement. "Beginning in 1997 with
22 Regents of the University of California v
23 Eli Lilly \& Co, the Federal Circuit has expanded

| 16 So her view is that the view of 19th | 16 MR. LUZ: It's a he. I'm sorry. Did |
| 17 century Supreme Court rulings doesn't provide a basis | 17 I say she? I apologize. |
| 18 for this new written description requirement. Is | 18 PROFESSOR MERGES: I've interrupted |
| 19 that right? | 19 this proceedings a couple times. I'm trying not to |
| 20 PROFESSOR MERGES: Are you referring | 20 do that. |
| 21 to the Rader dissent? Where? You threw me when you | 21 MR. LUZ: There's obviously some |
| 22 said "she." | 22 dissonance at least amongst two judges. |
| 23 MR. LUZ: I'm sorry. I'm referring to | 23 PROFESSOR MERGES: Mr. and Ms. Linn, |
| 24 the Linn dissent. This is on page 1368. | 24 they have a disagreement on it. |
| 25 PROFESSOR MERGES: Yes, okay. He. | 25 MR. LUZ: Sure. But let's turn to |
| www.dianaburden.com | www.dianaburden.com |
| 1345 | 1346 |
| 1 page 1360 and see what a concurring judge, Judge | 1 reasonable minds can disagree? |
| 2 Gajarsa, said. Right under Gajarsa, Circuit Judge, | 2 PROFESSOR MERGES: I don't know that |
| 3 concurring: "I join the opinion of the court but | 3 it's a "model." I agree more with his statement at |
| 4 write separately to explain my reasons for doing so. | 4 the top in the right column. I do not believe that |
| 5 Whether there is a freestanding written description | 5 this issue has a significant practical impact. That |
| 6 requirement pursuant to section 112, paragraph 1, is | 6 I subscribe to 100 percent. A lot of it is just |
| 7 a matter of statutory interpretation as the majority | 7 doctrinal wrangling and moving the headers around, |
| 8 correctly notes. In my judgment, the text of section | 8 basically. Again, what we care about is outcomes. |
| 9112 paragraph 1 is a model of legislative ambiguity. | 9 Did this set of outcomes change after written |
| 10 The interpretation of the statute, therefore, is one | 10 description? In my view, no. |
| 11 over which reasonable people can disagree and indeed, | 11 Mr. LUZ: Mr. President, I have about |
| 12 reasonable people have so disagreed for the better | 12 half an hour more. Should we just continue on? I |
| 13 part of a decade." | 13 don't want Professor Merges to feel -- if we want to |
| 14 It goes on to cite a couple of cases | 14 take a break. |
| 15 and he finishes that paragraph saying, "While not | 15 PROFESSOR MERGES: I can talk about |
| 16 entirely free from doubt, the majority's | 16 this stuff all day. |
| 17 interpretation of section 112 paragraph 1 is | 17 MR. LUZ: I'm happy to continue. |
| 18 reasonable, and for the need to provide some clarity | 18 Let's talk about the utility requirement standard. I |
| 19 to this otherwise conflicting area of our law, I | 19 think you testified this morning and we read in your |
| 20 concur with the majority's opinion that the statute | 20 case book earlier on that utility requirement in the |
| 21 may be interpreted to set forth an independent | 21 United States is only founded on two words in the |
| 22 written description requirement." | 22 statute, the first being section 101 requires |
| 23 Do you agree with Judge Gajarsa that | 23 inventions to be useful and the second statutory |
| 24 the statute, section 112 of the Patent Act, generally | 24 basis is section 112 which requires a patent to |
| 25 is a model of legislative ambiguity over which | 25 disclose the manner and process of making and using |
| www.dianaburden.com | www.dianaburden.com |

the lo wo back
to that tab to make sure I don't mess it up.
4 MR. LUZ: We can go back to the statute itself. It's tab 2.

PROFESSOR MERGES: No, I want to know
what I said about it. That's what you're reading, I
think.
9 IR. LUZ: Sure. Tab 7 , which is
Exhibit --
11 PROFESSOR MERGES: Yes, second
12 paragraph 209. Is that where you are?
13 MR. LUZ: That's right. So there's
14 two provisions here where utility comes in. The word
15 "useful" in section 101, and then what's called the
16 "how to use" prong of section 112. Is that right?
$17 \quad$ PROFESSOR MERGES: Usually we would
18 refer to it as the "how to use" prong of the
19 enablement requirement within section 112, but in the
20 spirit of your question, yeah, I think.
21 MR. LUZ: So useful -- enablement as a
22 matter of law incorporates utility because it's the 23 matter of use.
24
PROFESSOR MERGES, I don't think it right to say that enablement incorporates utility. I
www.dianaburden.com

1966 Brenner v Manson decision is that right? Would 2 you agree with that?
3 PROFESSOR MERGES: Are you reading from somewhere?

MR. LUZ: No, I'm just asking your
opinion as to whether you would agree with the
statement that the strictness by which the utility
requirement has been enforced has ebbed and flowed.
PROFESSOR MERGES: I'm afraid we're
10 going to have to talk about metaphors again because
11 ebb and flow has a tidal feel which represents --
12 depending on what tide you're talking about. I would
13 say it ebbs and flows in the same way a stream
14300 miles inland ebbs and flows. There's actually a
15 little tide, and if you were careful you could
16 measure it but it's not particularly noticeable, not
17 like you would experience right at the coast which is
18 a big -- you know. It's not a tidal bore, like we
19 might see in New Brunswick or something like that.
20
MR. LUZ: Let's go to paragraph 22 of
21 your first report. Page 9.
22 PROFESSOR MERGES: Yes.
23 MR. LUZ: You write, "A substantial
24 utility has also been described as practical utility,
25 which is how the Supreme Court described the
think the "how to use" prong of enablement is
logically connected to the utility requirement. I
would say that. But incorporation sounds like -- is
further than I would go.
5 MR. LUZ: The word "usefull" is not
defined in the statute but the U.S. courts have
interpreted that word to mean substantial, specific
and credible utility. Is that right?
$9 \quad$ PROFESSOR MERGES: Yeah, you can find
10 a cite for that proposition. That's a pretty
11 standard proposition.
12
13 "specific" and "credible" do not appear in the
14 statute itself?
15

## 10 dsear lochle

16 disparate locations but not together referring to
17 utility, so I don't want to be coy. No.
18 MR. LUZ: But they are the legal
19 requirements to meet utility in section 101?
20 PROFESSOR MERGES: They're a common
21 way to summarize the core elements of the utility 22 requirement. That's what I would say.
23 MR. LUZ: Professor Merges, the
24 strictness by which the U.S. courts applied the
25 utility requirement has ebbed and flowed since the
www.dianaburden.com

| 1350 |
| :--- |

requirement in Brenner v Manson." That's the case
from 1966. "Substantiality means essentially
something more than a research interest or, in some
cases, something beyond a nominal asserted use. A
good example of nominal use is In re Fisher." I want
to talk about the Fisher case and ask you about it
but before we get there, which is a 2005 case, let's
back up a little bit. I'll ask you to look at tab 21
of your binder which is Exhibit C-286. See this?
This is an article that you wrote with a co-author in 1995.

PROFESSOR MERGES: Yes, I see.
MR. LUZ: So I don't want to go
14 through this whole thing, but starting on page 3 we
15 have a discussion starting on utility and going on
16 page 4,5. I'm interested to read starting on
17 page 7. This is an article you're writing in 1995.
18 In the middle -- are you with me, Professor Merges?
19
20 of pages.

25 to answer for pharmaceutical inventions." I won't go
back to what the question is.
2 PROFESSOR MERGES: But you know I
3 will.
4
MR. LUZ: You're more than welcome to.
5 The question is actually on page 6. "How far must an
6 inventor go to establish that such an invention
7 offers a specific benefit in a currently available
8 form?" Then you go over to page 7, "This question
9 has been particularly difficult to answer for
10 pharmaceutical inventions which often involves
11 separately discovered products and uses." You see
12 that?
13 PROFESSOR MERGES: Yes. Top of 7.
14
MR. LUZ: Then you go on to discuss a
15 case Cross v lizuka, where the Federal Circuit
16 acknowledged that "'in vitro testing is but an
17 intermediate link in a screening chain which may
18 eventually lead to the use of the drug as a
19 therapeutic agent in humans,'but nonetheless
20 concluded that this link was sufficient to establish
21 a practical utility for the compound, noting:
22 'Successful in vitro testing will marshal resources
23 and direct the expenditure of effort in further in
24 vivo testing of the most potent compounds, thereby
25 providing an immediate benefit to the public,
www.dianaburden.com

| 1353 | 1354 |
| :---: | :---: |
| 1 So here you are writing in 1995 saying | 1 background, this was a case about expressed sequence |
| 2 that there has been -- that at one point the utility | 2 tags, or ESTs. From what I understand, purified |
| 3 requirement has been a more hospitable attitude | 3 nucleic acid sequences that encode proteins and |
| 4 towards patenting of early stage pharmaceutical | 4 fragments, I think in this case to do with maze |
| 5 inventions, but in recent years -- I assume in the | 5 plants. |
| 6 early 1990s, biotechnology patent practitioners | 6 PROFESSOR MERGES: Not quite. A very, |
| 7 perceived an increasing strictness on the part of the | 7 very important key that you kind of left out. |
| 8 PTO in its application of the utility requirement. | 8 MR. LUZ: Please go ahead and fill it |
| 9 What was happening around this time in | 9 in. Briefly just say what ESTs are for laymen to |
| 10 the mid 1990s that would be driving an increasing | 10 understand. |
| 11 strictness in the utility requirement to be applied? | 11 PROFESSOR MERGES: Short fragments of |
| 12 PROFESSOR MERGES: Well, the sentence | 12 full genes. Little -- call them snippets. They were |
| 13 refers to the perceptions of biotech patent | 13 not the coding sequence of a full gene. Some simple |
| 14 practitioners, for one thing, so it may be difficult | 14 science you guys probably know. Genes code for |
| 15 for me to say what they thought was going on. I'm | 15 proteins. That's what our genetic material does. |
| 16 not sure that addresses your question. | 16 Codes for all the proteins in our body. These |
| 17 MR. LUZ: Let's go to the Fisher case, | 17 snippets were little fragments of genes that the |
| 18 because I think that actually sort of exemplifies the | 18 scientists knew were active in various cells. They |
| 19 kinds of things that were happening in the mid 1990s | 19 weren't the whole genes themselves. They were just |
| 20 and early 2000s. Tab 4, Exhibit C-84. Just a | 20 little snippets which they tried to patent in large |
| 21 reminder, the Fisher case is something that you | 21 numbers, for reasons I can explain if you want. |
| 22 discuss in your Expert Report. Are you with me, | 22 Mr. LUZ: Okay. Thank you. |
| 23 Professor Merges? | 23 So in this case the court ruled that |
| 24 PROFESSOR MERGES: Got it. | 24 those ESTs failed for utility. Is that right? |
| 25 Mr. LUZ: This was, for some | 25 PROFESSOR MERGES: The patent |
| www.dianaburden.com | www.dianaburden.com |

2 inventions didn't meet the utility requirement.
3 That's how I would state it.
4 MR. LUZ: Then it went before the
5 court to determine timely whether the patent was valid.
7 PROFESSOR MERGES: Yes, the board
8 decision was appealed, and then that's where we get
9 this administrative appeal. In re Fisher.
10
MR. LUZ: Page 1370. At the bottom of
11 page 1370 on the right-hand column near the bottom,
12 the court observed, "Contrary to Fisher's argument
13 that section 101 only requires an invention that is
14 not frivolous, injurious to the well being, good
15 policy or good morals of society, the Supreme
16 Court" -- and we'll see in a moment it's referring to
17 Brenner v Manson -- "appeared to reject Justice
18 Story's de minimis view of utility." Page 1371
19 towards the end, "In its place the Supreme Court
20 announced a more rigorous test..." and it goes on to
21 say --
22 PROFESSOR MERGES: Where are you here?
23 MR. LUZ: Page 1371.
24 PROFESSOR MERGES: Which column?
25
MR. LUZ: Left-hand side. Before the
www.dianaburden.com
www.dianaburden.com
1 detect the presence of genetic material having the

2 same structure, it didn't think that it had enough
3 specific and substantial utility to be useful. Is 4 that right?
5 PROFESSOR MERGES: Practically
6 speaking, they had no use. So you may think why
7 would these people try to patent this stuff that had
8 no use? It was a business model, really. It was an
9 idea where if we got a bunch of sequence tags, then
10 when other people later figured out what these genes
11 do, we would take our sequence tags down off the
12 shelf and say, oh, well, your long gene sequence
13 which now codes for a valuable protein because it's a
14 human therapy, we own a piece of it. So for you to
15 use your gene you have to infringe our patents. So
16 the whole trick was we're going to randomly
17 characterize gene snippets, put them in the closet
18 and wait until somebody else did the work that
19 created the real value. And that's a classic case,
20 sometimes call it nominal utility, where you're just
21 trying to free ride on other people's work. You're
22 saying I'm going to try to get some patents that
23 don't really teach anything valuable, they don't have
24 a use, and when somebody discovers a real use -- the
25 uses that they listed in the patent were

1 block quote.
2 "In its place the Supreme Court
3 announced a more rigorous test" -- this is Brenner v
4 Manson. "The basic quid pro quo contemplated by the
5 constitution and the congress for granting the patent
6 monopoly is the benefit derived by the public in an
7 invention with a substantial utility." That's where
8 the substantial utility aspect comes in, right?
$9 \quad$ PROFESSOR MERGES: You're asking me is
10 that sort of where it entered the law?
11 MR. LUZ: Substantial utility is not
12 in the Patent Act, but this is where it entered the 13 law?
14 PROFESSOR MERGES: No. I'm saying
15 it's not in the Patent Act, I agree with that.
16 Second question, is this where it entered the law.
17 That, I'm not so sure of. You'd have to look at the
18 CCPA decisions prior to Brenner and look for
19 references to "substantial." They use some synonyms,
20 practical, substantial, real world. So I just can't
21 ascribe that this is the sort of origin of the
22 substantial utility requirement.
23 MR. LUZ: But the ultimate decision
24 was that the majority just didn't think that these
25 ESTs, which the court acknowledged could be used to
www.dianaburden.com

1 characterized in this opinion as nominal, and I could
2 describe them. They were basically use the gene
3 fragments to go look for genes, but they didn't say
4 anything about what those genes did or what they
5 coded for.
6
7 patents on a whole bunch of keys and waiting for
8 somebody else to develop a lock that they worked in.
9 And that was the game that they were preventing in
10 this opinion. That's a classic example of somebody
11 who hasn't done enough work to show that the
12 invention, the claimed invention, is operative. They
13 just didn't have it.
14 MR. LUZ: Judge Rader, again,
15 disagreed. He said he had the de minimis view of
16 utility.
17 PROFESSOR MERGES: Can l interrupt you
18 there? The de minimis view they're talking about
19 here is very old, from Justice Story, early 19th
20 century. Strictly speaking, dictum because Justice
21 Story not only was a Supreme Court justice, but he
22 had a little publishing business so he would
23 sometimes put addenda on his opinions, hoping to sell
24 more books. In one of these addenda he said useful
25 under the patent statute, in his view, means anything
that's not injurious. And that's the de minimis view. So that which is useful is that which is not intentionally created to harm people. So that's been
used to get rid of patents on nuclear bombs and torture devices and things like that. That's a so-called beneficial utility requirement. So that's what they're referring to as de minimis here. Even
Rader believes, you will see, that something is required. He just disagreed as to whether that 10 something was present in this case or not. 11 12 said, let's turn to what Judge Rader said, page 1380.
13 At the bottom of 1380 he writes, "The board and this
14 court acknowledge that ESTs perform a function, that
15 they have a utility, but proceed quickly to a value
16 judgment that the utility would not produce enough
17 valuable information. The board instead complains
18 that the information these ESTs supply is too
19 insubstantial to merit protection."
20 As we've seen, there is some
21 dissonance in the court as to what is a substantial
22 utility to fulfill to actually qualify for patent.
23 Is that right?
24
PROFESSOR MERGES: No. There's a
25 dissent in this case from Judge Rader, known to hold
www.dianaburden.com

|  |
| :--- |
|  |
|  |
| 1 youw.dianaburden.com |
| 2 of stockpiling stufft that's really not valuable until |

of stockpiling stuff that's really not valuable until
somebody else does the work. And we don't like to see that.
$5 \quad$ MR, LUZ: Professor Merges, would you
6 agree that the 2005 Fisher case was a return to a
more rigorous and heightened utility criteria?
PROFESSOR MERGES: Are you reading
from something?
MR. LUZ: I'm asking you a question if you would agree with my statement that the 2005
Fisher case was a return to a more rigorous and heightened utility criteria back to the Brenner case from 1966? Do you agree with that?

PROFESSOR MERGES: I would have to see
the context for the statement to make sure that I was really safe here.
18
19
20
21 22 say?
23 Mr. luz: Yes. Tab 14.
24
25

MR. LUZ: Sure. Tab 14. PROFESSOR MERGES: Nice try, though.
MR. LUZ: Exhibit R-120, page 330.
PROFESSOR MERGES: Tab 14, did you

PROFESSOR MERGES: Okay, go.
MR. LUZ: Janice Mueller's book,

1 strong and sometimes minority views, and I don't
2 think it's right to characterize this as somehow
3 representative of the state of the law.
4
5 applications on these little gene snippets which
6 required an application of utility doctrine to this
7 new kind of technological ideas. It's typical of
8 cases sort of at the forefront where you get a little
9 bit of ferment or wavering. Or you might say at the
10 cutting edge of the law opinions can differ, but
11 you're talking about arguments about whether the line
12 is here or here. Here or here. These are small
13 arguments. When you compare that standard, even the
14 one they're arguing about, to promise utility, that's
15 way out here. That's far beyond anything that Rader
16 or the majority are talking about because you're
17 scrutinizing the specification saying what about
18 performance characteristics. Nobody is talking about
19 that. They're saying is the claimed invention
20 workable. They disagree about the definition of
21 workability, and Rader's view here is distinctly in
22 the minority. Most people accepted Fisher as being
23 pretty much the straightforward application of
24 utility, and it's the classic example of why we don't
25 allow patents to attach too early in time before
www.dianaburden.com

1 Patent Law. Page 330 at the bottom, under the
2 heading Genetic Inventions.
3
promulgation of the utility examination guidelines
discussed above, a test case was brought to clarify
6 the standards for applying the section 101 utility
requirement to patent claims reciting ESTs (expressed
8 sequence tags). The result in In re Fisher was a
9 return by the Federal Circuit in 2005 to the rigorous
10 utility criteria announced almost 40 years earlier by
11 the Supreme Court in Brenner v Manson. It remains to
12 be seen whether this resurrection of Manson signals a
13 heightened utility requirement for all inventions or
14 will, instead, be limited to those inventions
15 involving genetic materials such as EST."
$16 \quad$ I'll ask my question again. Do you
17 agree that the 2005 Fisher case was a return to a
18 more rigorous and heightened utility requirement from
19 the 1966 Brenner case?
20 PROFESSOR MERGES: No, I would
21 disagree with that. For example, the key case in
22 utility is In re Brana 1995, and that is very
23 consistent with the Manson case in many ways.
24 MR. LUZ: Mr. President, are we
25 breaking for lunch?

THE PRESIDENT: You have how many more minutes of cross-examination?
3 MR. LUZ: I have about 15 more minutes.

5 6 lunch and resume at 1:30. Professor Merges, it means you are under testimony, and you're not allowed to discuss this case with anyone.
$\begin{array}{cl}9 & \text { PROFESSOR MERGES: Understood. } \\ 10 & \text { THE PRESIDENT: } \\ \text { Recess until } 1: 30\end{array}$
10 THE PRESIDENT: Recess until 1:30. (Lunch recess)
THE PRESIDENT: We will continue the
12 13 hearing. I understand there are a few household 14 matters. Ms. Cheek?
15
MS. CHEEK: Thank you, Mr. President. 16 As you can imagine the parties continued to confer on
17 the schedule in this proceeding and have recognized
18 that perhaps yesterday we were a bit ambitious. It's
19 the parties' view that we should sit tomorrow because
20 we do not believe that the two latter witnesses that
21 we were hoping to examine today, Mr. Erstling and
22 Mr . Reed, would be completed today and so we'd like
23 to hold those witnesses until tomorrow. We recognize
24 there are logistical issues related to that so we
25 wanted to raise it now, but the parties are in
www.dianaburden.com

| www.dianaburden.com | www.dianaburden.com |

2 in bold, 6 , the timing of proof see that.
3 PROFESSOR MERGES: Yes.
4 MR. LUZ: "In contrast to Cortright, 5 the court's decision in Rasmusson v
6 SmithKline Beecham Corp, 413 F.3d 1318, (Fed Cir
7 2005) establishes that an inventor making a
8 controversial assertion of utility may have to
9 provide proof of the asserted utility at the time of
10 application. Rasmusson sought to patent a process of
11 treating prostate cancer in humans by 'administering
12 a therapeutically effective amount [finasteride]'.
13 The disclosed process does indeed work, and Rasmusson
14 argued that his application was 'enabling because a
15 person of ordinary skill in the art could perform the
16 steps of the disclosed method without the need for
17 any experimentation'. Both the PTO and the Federal
18 Circuit rejected that argument and held that
19 Rasmusson's invention was not enabling because, based
20 on the evidence that Rasmusson had at the time of
21 filing, 'a person of ordinary skill in the art would
22 not have believed that finasteride was effective in
23 treating prostate cancer.' Evidence obtained after
24 the filing date was 'too late'." See that?
25
PROFESSOR MERGES: Yes.
www.dianaburden.com

| 1369 | 1370 |
| :---: | :---: |
| 1 of his '296 application, the Board was correct to | 1 you look at page 4 of the Rasmusson case -- we'll put |
| 2 find that all applications prior to that application | 2 the priority date and so on on hold for a moment -- |
| 3 were not enabled, and that Rasmusson was not entitled | 3 page 4 in the left-hand column, "In order to satisfy |
| 4 to a priority date earlier than the priority date of | 4 the enablement requirement of section 112, an |
| 5 SmithKline's '310 and '553 patents...' | 5 applicant must describe the manner of making and |
| 6 So here the question was what kind of | 6 using the invention 'in such full, clear, concise and |
| 7 evidence do you have at the time of your filing, is | 7 exact terms as to enable any person skilled in the |
| 8 that right? | 8 art... to make and use the same... As this court has |
| 9 PROFESSOR MERGES: When you say the | 9 explained, the how to use prong of section 112 |
| 10 issue, what -- | 10 incorporates as a matter of law the requirement of 35 |
| 11 MR. LUZ: To determine who had | 11 U.S.C. 101" -- utility -- "that the specification |
| 12 priority over the patent. | 12 disclose as a matter of fact a practical utility for |
| 13 PROFESSOR MERGES: Say the question | 13 the invention." |
| 14 again. The issue is? | 14 So as a matter of law section 101, |
| 15 Mr. LUZ: The issue is whether or not | 15 utility, is in the how to use prong of section 112. |
| 16 Rasmusson had evidence or some kind of proof to | 16 That's what the court is saying. |
| 17 establish utility at the filing date. Is that right? | 17 PROFESSOR MERGES: Not quite in those |
| 18 PROFESSOR MERGES: So the general | 18 words. They didn't say "is in the" requirement. You |
| 19 standard is that you have to have evidence that | 19 read the statement. |
| 20 someone skilled in the art would recognize that the | 20 MR. LUZ: Right. "As this court has |
| 21 claimed invention had utility, had a purpose, worked. | 21 explained, the how to use prong of section 112 |
| 22 Mr. LUZ: Let me back up before I get | 22 incorporates as a matter of law the requirement of 35 |
| 23 back to this. I asked you earlier about the | 23 U.S.C. section 101 that the specification disclose as |
| 24 relationship between the utility standard in section | 24 a matter of fact a practical utility for the |
| 25101 and the enablement standard in section 112. If | 25 invention." |
| www.dianaburden.com | www.dianaburden.com |

| 1 So section 112 as a matter of law <br> 2 incorporates section 101. <br> 3 PROFESSOR MERGES: Not quite. The <br> 4 utility requirement is necessary but not sufficient <br> 5 to satisfy the how to use prong of section 112. So <br> 6 in the sense of it being logically inclusive or <br> 7 prior, that's the relationship. "Incorporates" is a <br> 8 little bit too loose, I think. If you have no use <br> 9 for your invention how can you possibly satisfy a <br> 10 requirement that says you have to teach people how to <br> 11 use it if there's no use. As a logical matter it's <br> 12 prior to the larger consideration, that's what <br> 13 they're trying to say. <br> 14 <br> MR. LUZ: If you go back to the bottom <br> 15 of page 5 , again, we're going back to the question of <br> 16 whether or not, as was stated there, the original <br> 17 patentee needed to provide experimental proof that <br> 18 his invention could be effective in treating cancer. <br> 19 At the bottom, "Rasmusson argues that the enablement <br> 20 requirement of section 112 does not mandate a showing <br> 21 of utility or, if it does, it mandates only a showing <br> 22 that it is 'not implausible' that the invention will <br> 23 work for its intended purpose. As we have explained, <br> 24 we have required a greater measure of proof, and for 25 good reason. If mere plausibility were the test for | 1 enablement under section 112, applicants could obtain <br> 2 patent rights to 'inventions' consisting of little <br> 3 more than respectable guesses as to the likelihood of <br> 4 their success. When one of the guesses later proved <br> 5 true, the 'inventor' would be rewarded the spoils <br> 6 instead of the party who demonstrated that the method <br> 7 actually worked. That scenario is not consistent <br> 8 with the statutory requirement that the inventor <br> 9 enable an invention rather than merely proposing an 10 unproved hypothesis." <br> 11 So what the court is saying is that <br> 12 mere plausibility is not sufficient to establish <br> 13 enablement. Is that right? <br> 14 PROFESSOR MERGES: That's in the <br> 15 paragraph you just read, yes. <br> 16 <br> MR. LUZ: The court is saying that <br> 17 making respectable guesses is not good enough. You <br> 18 can't get a patent for an unproven hypothesis. Is <br> 19 that right? That's what the court says. <br> 20 <br> PROFESSOR MERGES: I don't see those <br> 21 words there. I think you are paraphrasing and maybe <br> 22 extrapolating a little bit. Did I miss them? <br> 23 <br> MR. LUZ: "As we have explained we <br> 24 have required a greater measure of proof, and for <br> 25 good reason. If mere plausibility were the test for |
| :---: | :---: |
| 1 enablement under section 112, applicants could obtain <br> 2 patent rights to inventions consisting of little more <br> 3 than respectable guesses as to the likelihood of <br> 4 success. When one of the guesses later proved true, <br> 5 the inventor would be rewarded the spoils instead of <br> 6 the party who had demonstrated that method actually <br> 7 worked. That scenario is not consistent with the <br> 8 statutory requirement that the inventor enable the <br> 9 invention rather than merely proposing an unproven <br> 10 hypothesis." <br> 11 So respectable guess and unproven <br> 12 hypothesis is not good enough for enablement. <br> 13 PROFESSOR MERGES: Of course, it all <br> 14 depends on the nature of the claimed invention and <br> 15 the level of skill in the field, level of skill in <br> 16 the art, and the content of the prior art. These <br> 17 cases are all very fact intensive in the sense that <br> 18 in this case it was a cancer treatment, and it <br> 19 involved inhibition of a protein that was thought to <br> 20 be one of the causes of cancer. In that kind of case <br> 21 the question is often whether one of skill in the art <br> 22 would recognize that this compound falls into a class <br> 23 or category that has been shown to have some <br> 24 effectiveness, and the way I read this is the court <br> 25 said on the state of these facts somebody skilled in <br> www.dianaburden.com | 1 the art would not believe that they had established <br> 2 utility -- <br> 3 MR. LUZ: At the time of filing, <br> 4 sorry, just to clarify, is that what you mean? <br> PROFESSOR MERGES: Yes, although we <br> 6 can introduce evidence pertaining to the accuracy of <br> 7 statements in the specification. They go to the <br> 8 state of affairs at the time of filing. <br> 9 <br> MR. LUZ: But the fact that we know <br> 10 that, subsequent to the time of filing, the chemical <br> 11 finasteride worked, it was chemically successful, but <br> 12 because he didn't have that evidence at the time in <br> 131987 when he filed for his patent, that wasn't good <br> 14 enough, as you wrote in your textbook. The evidence <br> 15 was too late. <br> 16 PROFESSOR MERGES: Okay. So Rasmusson <br> 17 argued that it worked, it was enabling -- okay, got <br> 18 it. "They held that Rasmusson's invention was not <br> 19 enabling because based on the evidence Rasmusson had <br> 20 at the time of filing, a person of ordinary skill in <br> 21 the art would not have believed that finasteride was <br> 22 effective in treating prostate cancer." That's <br> 23 pretty much what I just said. <br> 24 <br> MR. LUZ: "Evidence obtained after the <br> 25 filing date was too late." |

PROFESSOR MERGES: Yes, in this case,
1 2 because the state of the art at the time of filing was not such that somebody skilled in the art would recognize that this compound was going to be effective in treating cancer. That's not true in every case.
7
8 statement, paragraph 16. You see it?
9
10 page 7.
11 MR. LUZ: It's the paragraph that
12 starts off with "There is a well-understood
13 relationship between utility and the disclosure
14 requirements of 35 U.S.C.112." And you go on to say,
15 "Part of the disclosure required by the enablement
16 doctrine is that the applicant must describe 'how to
17 use' [the claimed] invention," and I think we were
18 just talking about that in Rasmusson, saying that
19 section 101 and section 112 are legally linked.
20 PROFESSOR MERGES: Yes.
21
22 paragraph you write, "This relationship leads to
23 confusion at times, but the law is actually quite
24 clear: Utility is a standalone requirement under
25 section 101, although it is relevant to the
www.dianaburden.com

| 1377 | 1378 |
| :---: | :---: |
| 1 court in Janssen Pharmaceuticals v Teva Pharm U.S.A, | 1 Alzheimer's. That was in 2001. Then in 2009, |
| 2 the In re '318 Patent Infringement Litigation." | 222 years later, the patent was invalidated. So let's |
| 3 Let's turn to that case. That is at | 3 see why. Turn to page 1324. Are you with me? |
| 4 tab 9. Exhibit C-279. Again, this was a case where | 4 PROFESSOR MERGES: Yes. |
| 5 post-filing commercial success and evidence did not | 5 MR. LUZ: We're looking at paragraph |
| 6 seem to be taken into account in terms of | 6 9. "The utility requirement prevents mere ideas from |
| 7 establishing patent validity. Just some background | 7 being patented." A little bit further down, "The |
| 8 on this case. | 8 utility requirement also prevents the patenting of a |
| 9 PROFESSOR MERGES: Can linterrupt? | 9 mere research proposal or an invention that is simply |
| 10 If , let's say, non-obviousness had been an issue then | 10 an object of research." You see that? |
| 11 commercial success might have been relevant. It's | 11 PROFESSOR MERGES: Yes, that's |
| 12 not universally barred from consideration in patent | 12 headnote 10-13. I see it. |
| 13 law. A lot has to do again with the state of the | 13 MR. LUZ: Then on the right-hand |
| 14 art. So this is early days of Alzheimer's research | 14 column of the same page, paragraphs 14-16: |
| 15 where the mechanism -- actually we still don't know | 15 "Typically, patent applications claiming new methods |
| 16 very much about it, and so on that state of facts it | 16 of treatment are supported by test results." You see |
| 17 could be difficult to establish that you've shown | 17 that? |
| 18 utility or workability, because it's too early in the | 18 PROFESSOR MERGES: Is that the |
| 19 field for simply a listing of a compound to establish | 19 sentence just before it says "But it is clear that |
| 20 a per se utility. It's not true in every case; it | 20 testing need not be conducted by the inventor"? Is |
| 21 really depends on the state of the art. | 21 that the one? Just before that sentence? Yes. |
| 22 Mr. LUZ: So this was the one where a | 22 Mr. LUZ: Then on page 1325, the next |
| 23 patent for a method of treating Alzheimer's -- the | 23 page over, paragraph 17. "In this case, however, |
| 24 patent was issued in 1987 and then it was approved by | 24 neither in vitro test results nor animal test results |
| 25 the FDA for use in the treatment of moderate | 25 involving the use of galantamine to treat |
| www.dianaburden.com | www.dianaburden.com |

1 Alzheimer's-like conditions were provided. The
2 results from the '318 patent's proposed animal tests
3 of galantamine for treating symptoms of Alzheimer's
4 disease were not available at the time of the
5 application, and the district court properly held
6 that they could not be used to establish enablement."
7 PROFESSOR MERGES: Yes, and of course,
8 again, that had to do with the state of the art at
9 the time this patent application was filed. The
10 galantamine is a compound -- it's interesting. It
11 appears in a natural product, a flower, a little
12 snowdrop, the Eurasian snowdrop, and it was one of
13 these things where chemists had an interest in the
14 compound, but because the mechanism for Alzheimer's
15 is not particularly well known even to cite animal
16 studies for related compounds in that setting, this
17 court said, was not enough to show that it would work
18 because it was just too early in the history of that
19 field, but in many cases, once you have the
20 characteristics of the compound well understood,
21 citing animal or even in vitro studies of related
22 compounds could be enough to support workability for 23 the claimed invention.
$24 \quad$ So ' 318 is in no sense any kind of
25 blanket rule. It just shows again that the standard
www.dianaburden.com
www.dianaburden.com
1 answer is right here in the Rasmusson case, which is

2 to say there are always other people breathing down
3 your neck, especially in a hot field like
4 Alzheimer's. So there is a constant trade-off that 5 you have.
$6 \quad$ They know the standard quite well but
7 they try to get something in early because they know
8 other people are racing for the same result, and
9 sometimes you end up putting it in too early and it
10 is characterized as speculation or an educated guess
11 but, again, that comes from the high-risk context
12 that we're talking about, which is multiple
13 researchers in pharmaceutical companies, and in some
14 cases universities. They're all circling around
15 these hot prospects and priority, being first, is
16 absolutely crucial. So that's the tension that leads
17 you to a case where the court might call it
18 speculation. Again, you can contrast the
19 specification in that case with many specifications,
20 like the one for Strattera in the Canadian patent or
21 olanzapine, much more extensive discussion of the
22 invention, the prior art, much better sense for
23 somebody skilled in the art that this thing
24 definitely has a use, simply because of the state
25 that the field has reached in its development.

1 is the claimed invention shown to be useful,
2 basically operational, to somebody skilled in the art. That's the standard.
$4 \quad$ MR. LUZ: Then page 1327, right-hand
column. "Thus, at the end" -- sorry, do you see
where I am?
7 PROFESSOR MERGES: Yes.
8 MR. LUZ: "Thus, at the end of the day, the specification, even read in the light of the
10 knowledge of those skilled in the art, does no more
11 than state a hypothesis and propose testing to
12 determine the accuracy of that hypothesis. That is 13 not sufficient."

14
Then the court ended up ruling that
15 "The '318 patent's description of using galantamine
16 to treat Alzheimer's disease does not satisfy the
17 enablement requirement because the ' 318 patent's
18 application did not establish utility."
19 PROFESSOR MERGES: I should say the
20 specification in this case, the written description,
21 was one page. It was put together very quickly.
22 They were trying to get something in the
23 Patent Office as quickly as they could. You might
24 say why would they ever do that, why not wait until
25 you had a better developed factual basis, but the
www.dianaburden.com

IR. LUZ: So the fact that the testing
that they got came afterwards didn't change the fact
that they didn't have the tests available at the time
they filed for their patent and, therefore, it was
invalid for lack of enablement because of utility.
PROFESSOR MERGES: Often after-filed
evidence is admissible and used when it's used to
substantiate doubts that somebody skilled in the art
might have, pertaining to the accuracy of statements
10 that are already in the specification, so it's
11 important to know that even after-filed evidence is
12 always directed at the accuracy of statements that
13 are already in the written description of the patent
14 application. And in this case what the court was
15 saying is that the evidence introduced goes well
16 beyond; it doesn't pertain to the accuracy of
17 statements in the specification.
18
19 studies cited in the specification: the yiust weren't
20 pertinent to the workability of this particular
21 invention. So the court said in this case this
22 post-filing evidence doesn't help you; it doesn't
23 pertain to the accuracy of statements in the
24 application that you yourself filed.
25 That's really what they're saying.

MR. LUZ: So these things can be

## case-specific.

PROFESSOR MERGES: Depending on the
state of the art looking at the claimed invention.
MR. LUZ: Thank you. I don't have any more questions, Mr. President.

THE PRESIDENT: Thank you. Ms. Cheek, questions for redirect?

MS. CHEEK: I do believe I'll have a
10 few questions, if I could just have one moment?
11 REDIRECT EXAMINATION ON BEHALF OF THE CLAIMANT
12
MS. CHEEK: Professor Merges, can you 13 explain to the Tribunal whether you consider yourself 14 qualified to provide an opinion on comparative law 15 with regard to the utility requirement?

PROFESSOR MERGES: Yes. I would provide a couple of reasons for that. One of the 18 courses that I teach is called Transnational
19 Intellectual Property Law, and picking up on Chairman
20 van den Berg's distinction earlier, it is both an
21 international law course in the sense that I try to
22 cover the treaties, et cetera, but it's also a
23 comparative law course, primarily focusing on the law 24 of Europe, China, the U.S, but broadly covering other 25 jurisdictions when they're relevant. So I think I
www.dianaburden.com

| 1385 | 1386 |
| :---: | :---: |
| 1 I believe that you stated that there's a logical | 1 (Professor Merges drew on the white board) |
| 2 relationship between section 112, which is the | 2 PROFESSOR MERGES: I'll just explain |
| 3 enablement requirement, the disclosure requirement in | 3 it first. I think of utility as this very simple |
| 4 the U.S., and section 101, which is the utility | 4 threshold requirement. It's kind of binary, as I |
| 5 requirement in the U.S. | 5 said in my reports. The nature of section 112, |
| 6 I was wondering if you'd care to | 6 disclosure requirements, is that they have to be |
| 7 explain what the logical relationship is between | 7 proportional or commensurate to the scope of the |
| 8 those two requirements? | 8 patent claim, right? |
| 9 PROFESSOR MERGES: I think the best | 9 So we look to the claimed invention |
| 10 way to put it is that meeting the utility standard is | 10 when we ask is it useful, does it have a purpose, but |
| 11 necessary but not sufficient to meeting the how to | 11 that's very different from the character of the |
| 12 use standard in section 112. That's probably the | 12 inquiry where we ask have you earned and merited the |
| 13 cleanest way that I could say it. | 13 breadth of your claims. That is much more a question |
| 14 Again, if you don't have any use at | 14 of have you disclosed or taught enough to merit the |
| 15 all then you can't say that you've taught somebody | 15 scope of the claims that you're trying to get in your |
| 16 how to use your invention, but, of course, having | 16 patent. |
| 17 said it's basically workable, I've taught you how to | 17 So I sketch it out. I think of |
| 18 use it, that may be a far cry from teaching somebody | 18 utility as just this very simple threshold, and I |
| 19 of skill in the art how to use the claimed subject | 19 think of the section 112 requirements as being much |
| 20 matter. Sometimes this is a complicated sort of | 20 more of a continuous function where the degree of |
| 21 issue. | 21 disclosure earns you broader claim scope. So if |
| 22 Maybe it's better if I just kind of -- | 22 you'll indulge me a quick sketch, what you have is a |
| 23 would it be okay if I drew a diagram? Is that | 23 sort of a timeline here where you're talking about |
| 24 kosher? No? | 24 the research effort or the amount of information |
| 25 THE PRESIDENT: Okay. | 25 you've disclosed. If you want to sort of make an |
| www.dianaburden.com | www.dianaburden.com |

2 the amount of money that's expended, and it goes up 3 over time.
4 So you think of the raw, pure idea
5 that comes to you in the middle of the night without
6 any work or investment yet, that's down here, that's
7 kind of zero disclosure. Haven't told anybody,
8 haven't done anything.
9
The next point might be the point
10 where you take a completely blue sky idea and you
11 write it down on a piece of paper, and you say
12 wouldn't it be great to have a pocket-sized device
13 that allows human flight, something like that.
14
If you were to file that paper in the
15 Patent Office with absolutely no disclosure, having
16 taught nobody anything except "Here's my idea,"
17 clearly that's not workable. You haven't done
18 anything yet. So the next few stages are stages
19 where you start to either describe the idea with more
20 precision so that somebody skilled in the art can
21 understand what you're talking about and can see, oh,
22 I can see the use of that, or where you actually
23 start to experiment, do some testing, and do some
24 preliminary screening to see if your idea meets the
25 proof of concept. Then, as you go along, you expend
www.dianaburden.com

1
2 what's on the X axis and the Y axis?
3
4 time as time goes along, and this is the amount of
5 information that you've disclosed for. So in the
6 enablement context it's more like that where, as time
7 goes on and you are investing more resources, the
8 amount of information you're disclosing is increasing
9 and that allows you to get broader claims, but well
10 beyond this point here you're adding information and
11 you are earning yourself, in a sense, broader claims.
12 So it's a very simple kind of threshold idea that it
doesn't take very much information, and that happens fairly early in the scheme of things.

The point is, once you've established utility for a class of things, you're done. Utility
gets checked on the box. The reason people go on and do more, the reason that we see more disclosure beyond just workability, is that you are trying to
20 show that you deserve broader claims, and that's 21 basically how patent law kind of works.
22 MS. CHEEK: If I take you to tab 8, 23 that's the Ariad case that you've discussed a few 24 times today. The Ariad case is $\mathrm{C}-278$ and $\mathrm{R}-99$. This 25 is a case about the section 112 disclosure

1 more resources and you disclose more information and 2 so on and so forth.
3 In the pharmaceutical field this early
4 stage might be as simple as saying there are some
5 interesting molecules, they're structurally similar
6 to some others, we know that there's general function
7 in this field, and so I think borrowing these
8 neighboring compounds and trying them out might have
9 a use. That might be enough to show right there that
10 it's workable.
11 There may be other stages where you
12 try them in a petri dish in the lab and test them on
13 well-accepted lab proxies for operativeness, and then
14 there might be animal studies in mice or hamsters or
15 dogs or horses, or whatever. Then you go on to
16 trying in a few limited patients in Phase I,
17 Phase II, Phase III.
18 Anyway, let me get to the point of
19 this diagram. So, as you go along, you have your
20 sort of level of expenditure and once you hit this
21 stage here usually, pretty close to the bottom, this
22 is resources over time here, once you hit that,
23 you've established it and that's it. So it's just
24 kind of a binary function, okay, I've shown
25 workability.
www.dianaburden.com

| 1389 | 1390 |
| :---: | :---: |
| 1 THE PRESIDENT: Could you help me, | 1 requirements you were describing, correct? You were |
| 2 what's on the $X$ axis and the $Y$ axis? | 2 asked some questions on page 1360, and page 1360 is |
| 3 PROFESSOR MERGES: Yes. So this is | 3 Judge Gajarsa's concurrence. |
| 4 time as time goes along, and this is the amount of | 4 PROFESSOR MERGES: Yes. |
| 5 information that you've disclosed for. So in the | 5 MS. CHEEK: I believe you took us to |
| 6 enablement context it's more like that where, as time | 6 the top of the second column where Judge Gajarsa |
| 7 goes on and you are investing more resources, the | 7 stated, "I do not believe that this issue had a |
| 8 amount of information you're disclosing is increasing | 8 significant, practical impact." Was there anything |
| 9 and that allows you to get broader claims, but well | 9 you cared to elaborate on having drawn our attention |
| 10 beyond this point here you're adding information and | 10 to that statement in Judge Gajarsa's concurrence? |
| 11 you are earning yourself, in a sense, broader claims. | 11 PROFESSOR MERGES: Well, yeah, it goes |
| 12 So it's a very simple kind of threshold idea that it | 12 to the point that I was trying to make before, which |
| 13 doesn't take very much information, and that happens | 13 is it's interesting to talk about doctrine and |
| 14 fairly early in the scheme of things. | 14 changes in doctrinal language, but the take-home |
| 15 The point is, once you've established | 15 value of most of this stuff has to do with outcomes. |
| 16 utility for a class of things, you're done. Utility | 16 So the question is does the recent line of written |
| 17 gets checked on the box. The reason people go on and | 17 description cases produce significantly different |
| 18 do more, the reason that we see more disclosure | 18 outcomes as compared to the pre-existing line of |
| 19 beyond just workability, is that you are trying to | 19 enablement cases. You see that Judge Gajarsa is |
| 20 show that you deserve broader claims, and that's | 20 saying he doesn't think there's any significant, |
| 21 basically how patent law kind of works. | 21 practical impact, meaning the doctrine language may |
| 22 MS. CHEEK: If I take you to tab 8, | 22 change but the basic test seems to be the same. Then |
| 23 that's the Ariad case that you've discussed a few | 23 he cites, as he says further down, "Empirical |
| 24 times today. The Ariad case is C-278 and R-99. This | 24 evidence demonstrates that outside the priority |
| 25 is a case about the section 112 disclosure | 25 context the written description doctrine seldom |
| www.dianaburden.com | www.dianaburden.com |

serves as a separate vehicle for invalidating claims," and he cites a blog post from Professor
Dennis Crouch, University of Missouri. Actually,
that is a working paper, I should say. He has a
prominent blog but this particular piece of
scholarship is a working paper that's posted, and he
did a study and you can see the results there.
Basically it says having or not having written
description doesn't change things very much.
10
question, Professor Merges, is, in your view, is
patent law just a grab bag or, in other words, does
it matter under which patentability requirement a patent is invalidated?

Just to repeat my question, my
question was is patent law, in your view, a grab bag?
Does it matter under which patentability requirement a patent is invalidated?

PROFESSOR MERGES: Well, two parts.
One, is it a grab bag? I don't think so, and I
certainly hope not. I don't like to think that I
devote so much of my time to a grab bag field.
Does it matter under which heading we
invalidated patents? Well, I would say just to be
specific, I mean, if you were a patentee, then at the
www.dianaburden.com

| www.dianaburden.com |
| :--- |
|  |
| 1 betray ignorance. We've heard a lot of very |

2 interesting and informative stuff going to the detail of the cases. What l'd like to try and do is sort of zoom out to 15,000-foot and try and get a broader sense of some of the things that you've said. As I say, forgive my ignorance.

The first question l'd like to ask,
just to situate some of this in my own mind, is is
the phenomenon of new use and selection patents
particular to the chemical and biotech fields, or does it apply more broadly?

PROFESSOR MERGES: In a general sense,
Sir Daniel, it does apply more broadly. There are
situations outside chemical and pharma where there might be a new use allegation.

SIR DANIEL BETHLEHEM: So they apply
16
17 more broadly. Do they have a predominant role? I'm
18 trying to get a feel for whether, when we talk about
19 new use and selection patents, the thing that would
20 come to the mind of an expert like yourself is well,
21 we're probably talking about chemical patents or 22 biotech patents.
23
24
25
PROFESSOR MERGES: Yes. In the main, yes. And, again, is it okay if I --

SIR DANIEL BETHLEHEM: Please do.
www.dianaburden.com
end of the day your patent is either valid or invalid
and doctrinal discussions may or may not soothe your
hurt, but if your patent is invalid, it's invalid.
So at that level, again, of ultimate
outcomes for the patentee, it may not make much
difference, but I would say in terms of doctrinal
clarity and in terms of the way patent law is
structured, to kind of rephrase the question, one way
to hear the question is do we really need all these
different requirements of patentability, why don't we
11 just say well, you either deserve one or you don't.
12 It's an up or down. The reason is each one plays a
13 distinct role, and they are sequenced and structured
14 in this way I think for a purpose.
15
16
17
18
19
20
21
22 you.
23
24
25
Merges, you'll forgive my questions because they
www.dianaburden.com

1393
Does that answer your question?
MS. CHEEK: It does. Thank you,
Professor Merges. I have no further questions,
Mr. President.
THE PRESIDENT: Thank you. Any
application for recross?
MR. LUZ: None, Mr. President. Thank
QUESTIONS BY THE ARBITRAL TRIBUNAL
SIR DANIEL BETHLEHEM: Professor

PROFESSOR MERGES: The reason for that
2 is, again, I was trying to describe how chemists
3 think and how these basic chemical inventions come
about. As I said, these are researchers, they think
very spatially, so they may look at a molecule or a
class of molecules and say you know, I think there
may be something interesting there. And when they
start to think about how they might synthesize, make
a brand-new compound that maybe works like another
10 family of compounds, and they hope maybe even better,
11 they can start playing around with the basic
12 difficulty of putting the thing together. But the
13 point is that these chemical inventions, especially
14 when you have a whole new class of compounds, you can
15 discover kind of a backbone or a core to this thing
16 that has many, many variants, and it's actually quite
17 common.
18
19
class from which olan
20 saw in the Canadian
20 saw in the Canadian case -- the patent claimed a
21 family of compounds in the trillions. That just
22 boggles the mind, and you think how can that possibly 23 be.
24
25
25 that particular type of what they call a tricyclic
www.dianaburden.com

1 ring, three geometric structures at the core of it,
2 that that could be the basis of a whole bunch of
3 compounds that he expected would have this
4 characteristic of affecting the central nervous
5 system, because the basic shape of this kind of
6 general class of compounds had been shown to have
7 some efficacy.
8
So when he first synthesized that he
9 obviously synthesized a few actual real chemicals,
10 and then they characterized their structure in
11 various ways with crystallography and this kind of
12 thing, but to a chemist they instantly realized that
13 this core structure can have many, many variants. If
14 you were to see a diagram of this original patent
15 it's basically two hexagons and an oddly shaped
16 pentagon next to it, and they're all attached
17 adjacent, but at each point in each hexagon and the
18 odd-shaped pentagon imagine a little line coming off,
19 and that line points to a whole set of things that
20 can be attached there, right.
21 Now, if you just take one point on one
22 hexagon, there might be several families of things
23 that can be attached there, so you run this whole
24 analysis again at another level, which is just for
25 this side group, and the way this happens in chemical
www.dianaburden.com

| 1397 | 1398 |
| :---: | :---: |
| 1 The way selection invention law works | 1 to make and use. And they say how can the selection |
| 2 is you ask yourself from the perspective of somebody | 2 invention be non-obvious, when the whole thing was |
| 3 skilled in the art just at the moment before you | 3 enabled 13 years ago? And this is the answer. Do |
| 4 select and test that one new candidate, the one you | 4 you see what I'm getting at? So it's non-obvious |
| 5 select from the big group, what would somebody of | 5 that that particular one would work so well, either |
| 6 skill in the art have said about that. Do you | 6 because it's advantageous or avoids the negative. |
| 7 think -- this hypothetical person of skill in the | 7 SIR daniel bethlehel: Or because you |
| 8 art -- do you think this particular species, this | 8 start off with the number of trillion and then you've |
| 9 little family member, is going to be especially | 9 got to whittle it down. It's very interesting. The |
| 10 effective? Do you have any reason to think that? Or | 10 word that you used I think in your response here was |
| 11 do you think it going to be especially good about | 11 that chemists think spatially and I'm not sure that |
| 12 avoiding the negative consequences, and if that | 12 lawyers think spatially so perhaps we have to try and |
| 13 person would say no, I have no reason to think it's | 13 get our minds around it. But in your opening |
| 14 any better or worse than the vast number of | 14 presentation, the word that you used was "intuitive" |
| 15 hypothetical members of this giant set, and if it | 15 to describe the same thing, and you were very visual |
| 16 turns out to have these advantageous properties, or | 16 in describing how chemists sit in their labs and |
| 17 if it avoids the negative consequences, we say that's | 17 they've got everything joined up and it's an |
| 18 a significant invention because from the point of | 18 intuitive process. |
| 19 view prior to the invention, which was the picking | 19 What l'd be interested to know -- and |
| 20 out and testing, no one would have predicted it would | 20 I'd like to take both the question and your answers |
| 21 be particularly successful. So that's how selection | 21 away from the specific facts of this case and just |
| 22 inventions come to be. | 22 deal with a generality -- does intuitive innovation |
| 23 My students will always ask, wait a | 23 in the chemical and biotech fields give rise to |
| 24 minute, was the first patent, the big giant one, was | 24 special patentability challenges, for example, |
| 25 that enabled? And I say yes, because you teach how | 25 because the intuition may not have a sufficiently |
| www.dianaburden.com | www.dianaburden.com |

real foundation but you nonetheless are seeking a
2 monopoly?
$3 \quad$ PROFESSOR MERGES: Yes. I was trying
4 to explain a couple of things. I think that's a fair 5 question.
$6 \quad$ The research process often begins with
7 an intuition, but what I was referring to
8 specifically was in the context of the selection
9 invention, a particular researcher might be, you
10 might say, a little bit ahead of the average person
11 of skill in the art, and that might lead them to say
12 "I feel that these compounds are going to have some 13 advantageous properties."
14 This really doesn't pertain to utility
15 because, again, in order to get the original big
16 giant family patent, you have to show utility for
17 that, and, as I was saying earlier in my testimony,
18 utility for selection inventions is sort of a
19 non-issue because you're picking a family member from
20 a family that's already been blessed as having
21 utility, so when I was talking about intuition really
22 what I was getting at is why would you ever write in
23 a patent specification "This thing has advantageous
24 properties" if you don't have absolute, complete,
25 utter convincing to persons skilled in the art
www.dianaburden.com

| 1401 | 1402 |
| :---: | :---: |
| 1 don't think there's a viable policy rationale for | 1 don't characterize the Respondent's case but to some |
| 2 that, because it really helps, I think, to apply a | 2 extent there's an element of well, in certain |
| 3 very consistent standard and to say a selection | 3 circumstances the promise of utility, even in cases |
| 4 invention like any other invention has to meet the | 4 in which there may have been an original patent, as a |
| 5 requirements of patentability. That's what we do | 5 policy matter may be important. So is this your |
| 6 with non-obviousness. Even though you can | 6 point of divergence on the Canadian promise standard? |
| 7 characterize it as a special class of cases, the | 7 PROFESSOR MERGES: I guess my point of |
| 8 standard is still the same, and I would say that's | 8 divergence would be whatever that is, if you were to |
| 9 true of utility. So, again, you can establish that | 9 do that, to me could not be classified as a utility |
| 10 this big giant family has general utility and, | 10 requirement. Whatever that was. Because the basic |
| 11 indeed, you have to to get that first patent. | 11 standard for utility is, again, quite straightforward |
| 12 If you're selecting something from | 12 and quite consistent and so to have a special |
| 13 that group, you know that it already has a proven | 13 doctrine of utility, if you agree we're going to |
| 14 track record of a general utility because the first | 14 apply utility and then you start making special |
| 15 patent issued. And, as a result, I think that it | 15 cases, to me it doesn't seem as though you would be |
| 16 would be really burdensome, and I don't see it would | 16 consistent with the traditional utility test. So if |
| 17 serve any good purpose to set another utility | 17 you're saying might there be -- and I can't think of |
| 18 requirement for the selection invention later. To | 18 a good policy rationale to say we need to make it |
| 19 me, that wouldn't make any sense, and that goes back | 19 more difficult, for whatever reason, to get a |
| 20 in my mind to the basic rationale for having a fairly | 20 selection invention patent. I can't think of a good |
| 21 low utility standard. | 21 reason. Because if you make it more difficult to get |
| 22 SIR DANIEL BETHLEHEM: Is this the | 22 a selection invention patent, it could lead people to |
| 23 difference or where you part way with the Canadian | 23 say once we get this big family patent, we really |
| 24 approach? You're saying it wouldn't make sense to | 24 don't have much of an incentive to keep looking |
| 25 have that additional standard to some extent -- and I | 25 inside that class. Let's get our people to go and |
| www.dianaburden.com | www.dianaburden.com |

look at brand-new families of compounds. And I think
2 the problem with that is you'd miss some excellent 3 opportunities, like olanzapine.
4 I mean, there's no reason to think
5 that it would be better, it turned out to be better,
6 so if you made it more difficult, you go to the
7 patent committee at the company and they say well,
8 you know, looking around inside what's already been
9 patented, there's kind of a disincentive to do that
10 so we want you to go look elsewhere. I think you
11 would leave on the table some potentially valuable
12 inventions.
13 SIR DANIEL BETHLEHEM: Presumably 14 that's a policy choice? You could presumably have,
15 if we take it out of the realm of judge-made law to
16 the realm of a legislator, you could have legislators
17 sitting in Canada and the US and UK, wherever else,
18 debating exactly this in deciding where they wanted
19 to draw the line? As I understand what you've just
20 said is a policy choice.
21 PROFESSOR MERGES: Yes, and I think 22 that's where you'd have to say, if you had completely
23 unfettered discretion, could you have that policy
24 conversation and, of course, the answer is yes. If
25 you were to say have you constrained yourself by

1 signing an international treaty, it's not really my
2 remit, but I would say that changes the nature of the
3 question.
4 SIR DANIEL BETHLEHEM: As an expert in
5 the field -- and I introduce the question in these
6 terms just to clarify that I'm not asking you to
7 speculate, I'm asking for your expert opinion -- why
8 is there this difference, as you see it, in the
9 development of Canadian law on the one hand in this
10 area and the development of U.S. law, leaving aside
11 any question of the whimsy of the judge? Has it got
12 something to do with the corporate structure of the
13 Canadian versus the U.S. pharmaceutical sector? Has
14 it got to do with the differences in the legal
15 framework? Has it got to do with the fact that there
16 may be just immensely creative Canadian patent
17 lawyers and less creative U.S. patent lawyers? Why
18 are we seeing this difference?
19 PROFESSOR MERGES: The line between my
20 expert opinion and speculation here is tricky.
21 SIR DANIEL BETHLEHEM: I don't invite
22 you to speculate. If you've got an expert opinion to
23 offer l'd be delighted to hear it, but I don't invite
24 you to speculate.
25 PROFESSOR MERGES: I don't think I can
www.dianaburden.com

1405
1406

1
SIR DANIEL BETHLEHEM: Before you do,
2 let me just clarify. By "irrational" I didn't intend
3 to inquire as to whether you thought it was an
4 unsustainable policy approach. I'm trying to use
5 "irrational" in a legal context that the decisions of
6 the Canadian courts, to Mr. Justice Binnie and others
7 in AZT, were irrational in the sense that they ought
8 to be reviewed. That kind of irrationality.
$9 \quad$ PROFESSOR MERGES: In the sense of not 10 based on sound reasoning?
11 SIR DANIEL BETHLEHEM: Not based on 12 sound reasoning.
13
14 say to me they seem irrational. And why would that
15 be so? And I don't mean to denigrate individual
16 judges. This is something I know something about, so
17 it's my opinion. What are the consequences of
18 requiring much more effort, much more disclosure to
19 establish utility? It goes back to the sort of core
20 of what utility is trying to do, so it's general to a
21 class of problems. At what point in the development
22 of some resource do we legally grant a property
23 right? When do we do that.
$24 \quad$ Now, the concern with speculation is
25 that if we set that point too early, if we make it

3 you patent that? What would be wrong? The answer is
4 people would spend all day in rooms writing down
5 ideas and sending them to the Patent Office. So what
6 you get there is too much effort diverted to a not
7 very productive activity, which is writing things on
8 pieces of paper.
$9 \quad$ That's the concern with speculation.
10 What's the concern on the other side? This is
11 reflected in my report, I think paragraph 44, it's
12 reflected in the Federal Circuit case of In re Brana, 13 and a lot of writing in this field.

14
15 requirement too far the other way, the problem with
16 requiring too much investment effort, whatever you
want to describe it as, is that you drive people out
18 of the field because you make it so that, before you
19 know you'll have exclusivity; before you know that 20 you will be able to develop this field on your own,
21 you have to spend a huge amount of money, and right
22 up until the point when you get your patent right,
23 there's a lot of risk. So the more money you have to
24 spend, the more effort you have to expend before you
25 assign the property right, the more risk there is for
www.dianaburden.com

## 1409

www.dianaburden.com

| 1409 | 1410 |
| :---: | :---: |
| 1 <br> There's a good analogy in the law of <br> 2 hard rock mining, silver and gold, at least in the <br> 3 US. In the US in order to get a mining claim you <br> 4 have to show a certain amount of what's called <br> 5 improvement which means you have to spend some money <br> 6 on it and that's to keep people from running around <br> 7 the Sierras, or whatever mountains you care to name <br> 8 and just staking claims and saying, well, I own this. <br> 9 Again, the concern is you'll stake the claims and <br> 10 wait until somebody else finds the gold and you are <br> 11 free-riding and that's no good. <br> 12 <br> But we don't require to spend so much <br> 13 that you're sinking a mine shaft and employing 75 <br> 14 people and spending millions of dollars. Why not? <br> 15 Because right up to the point where you get your <br> 16 right that's all at risk. If somebody says now we <br> 17 decided not to give you the right -- <br> 18 <br> The point is there's a consensus that <br> 19 it makes sense to set it at a substantial but not <br> 20 really, really significant level. <br> 21 <br> SIR DANIEL BETHLEHEM: I just have one <br> 22 last question. You spoke a little bit in response to <br> 23 the redirect about unifying standards. On <br> 241 January 1994, when NAFTA entered into force, <br> 25 Article 1709 provided a framework for patent law <br> www.dianaburden.com | 1 across the three countries. Did Article 1709 <br> 2 introduce a new substantive law into U.S. patent <br> 3 law -- not a procedural framework but a new <br> 4 substantive law of patents into U.S. patent law? <br> 5 PROFESSOR MERGES: I think it's a good <br> 6 question. I don't know that that hypothesis or <br> 7 proposition has really been tested. I mean my best <br> 8 answer is I don't know. <br> 9 SIR DANIEL BETHLEHEM: It's being <br> 10 tested here. <br> 11 PROFESSOR MERGES: True. You were <br> 12 asking about U.S. law. So what I mean to say is that <br> 13 since then I don't think there have been any <br> 14 changes -- <br> 15 THE PRESIDENT: If you don't know, <br> 16 don't speculate, please. <br> 17 <br> PROFESSOR MERGES: I don't think there <br> 18 have been any changes so big that we know. There <br> 19 hasn't been a test case. <br> 20 <br> SIR DANIEL BETHLEHEM: Thank you. <br> 21 MR. BORN: Just very briefly, in tab <br> 22 8, the Ariad decision that you've already discussed a <br> 23 couple of times, there's a discussion of the concept <br> 24 of stare decisis, both in the majority at page 1347 <br> 25 and then in Judge Lynn's dissent on page 1368. <br> www.dianaburden.com |

5 expectations of the inventing community.
$6 \quad$ My question is we all -- or at least
7 all of us common lawyers -- are familiar with the
8 notion of stare decisis. How precisely does it apply
9 in the context of U.S. patent law?
10
PROFESSOR MERGES: I think it applies
exactly to the same degree it applies in all areas of
12 U.S. law. I don't think patent law is in any sense
13 an exception subject to the same principles.
14 MR. BORN: My understanding was that
15 actually U.S. stare decisis laws applied in different
16 ways in different fields. If you were in a
17 legislative field where Congress could fix mistakes
18 then it was one rule, and in constitutional fields it
19 was different. But I guess I'm wrong.
20 PROFESSOR MERGES: Stare decisis, a
21 very broad topic. In its general sense I think it's
22 consistent. It means decided law is fixed.
23 MR. BORN: Thank you.
24 THE PRESIDENT: Professor Merges,
25 could you please go to slide 8 of your opening
www.dianaburden.com

| 1413 | 1414 |
| :---: | :---: |
| 1 that's the order of the statute, so utility is 101, | 1 there. |
| 2 novelty is 102, non-obviousness is 103, and | 2 THE PRESIDENT: Is it fair to say that |
| 3 enablement and written description is 112. It just | 3 in one court case you may see a focus on |
| 4 follows from the structure. | 4 non-obviousness and in another case on novelty, and |
| 5 THE PRESIDENT: Could it be that | 5 it depends on how the courts litigated it or how the |
| 6 certain aspects are overlapping? | 6 judge approaches it? |
| $7 \quad$ PROFESSOR MERGES: Certainly at a high | 7 PROFESSOR MERGES: I think there's a |
| 8 level there are overlaps in the concepts. | 8 certain amount of discretion, although sometimes the |
| 9 THE PRESIDENT: Or what you say | 9 Federal Circuit has tried to impose a kind of |
| 10 interacting? What's the interaction between which of | 10 doctrinal ordering. |
| 11 those elements you see here of the doctrine? | 11 THE PRESIDENT: Now, in the beginning |
| 12 PROFESSOR MERGES: I didn't quite | 12 of your cross-examination you have testified about |
| 13 catch that last -- | 13 your knowledge of Canadian patent law. You remember |
| 14 THE PRESIDENT: Which of the elements | 14 that? |
| 15 you see here in the two bullet points are | 15 PROFESSOR MERGES: Yes. |
| 16 interacting, according to you, under U.S. law? | 16 THE PRESIDENT: How far does it go? |
| 17 PROFESSOR MERGES: Well, in a sense | 17 Obviously you have given opinions on utility, on the |
| 18 they all interacting because they all apply to each | 18 promise utility doctrine. So you have studied under |
| 19 patent, but, just to take an example, novelty you | 19 Canadian law utility requirements. Is that correct? |
| 20 could think of as a kind of extreme case or extreme | 20 PROFESSOR MERGES: Particularly in the |
| 21 form of non-obviousness. Novelty says if the same | 21 cases that we talked about, yes. |
| 22 exact thing is out there, you can't patent it, and | 22 THE PRESIDENT: Have you also studied |
| 23 non-obviousness says if something is a trivial | 23 other aspects of Canadian patent law? |
| 24 advance you can't patent, and the most simple example | 24 PROFESSOR MERGES: Not in a systematic |
| 25 of a trivial advance is something that's already out | 25 way. |
| www.dianaburden.com | www.dianaburden.com |

| 1 THE PRESIDENT: Then you are not | 1 nothing further. |
| :---: | :---: |
| 2 capable of telling me which are the corresponding | 2 Any follow-up questions? |
| 3 concepts of what you see here on slide 8 under U.S. | 3 MS. CHEEK: I do believe I have one |
| 4 law? | 4 follow-up question. |
| 5 PROFESSOR MERGES: I think you meant | 5 REDIRECT EXAMINATION ON BEHALF OF THE CLAIMANT |
| 6 under Canadian law? | 6 MS. CHEEK: Professor Merges, you were |
| 7 THE PRESIDENT: No, on the Canadian -- | 7 asked by Sir Daniel a question about 1709(1) of |
| 8 sorry, what you see on slide 8 is U.S. law. What are | 8 NAFTA. Then you said there had not yet been a test |
| 9 the corresponding concepts under Canadian law? | 9 case about U.S. law. In your view, does 1709(1) of |
| 10 PROFESSOR MERGES: Well, I know from | 10 NAFTA constrain U.S. substantive law developments? |
| 11 the NAFTA treaty that utility, novelty and -- | 11 PROFESSOR MERGES: Yes, I believe it |
| 12 THE PRESIDENT: No, sorry, I'm asking | 12 does. I don't think that Congress could amend the |
| 13 you about Canadian law. | 13 Patent Act consistent with NAFTA and eliminate one of |
| 14 PROFESSOR MERGES: Yes. | 14 the tests, for example, non-obviousness, novelty. I |
| 15 THE PRESIDENT: So you only know or | 15 don't think that they could define one of those |
| 16 what you have studied is the utility requirement of | 16 standards in a way that's completely radically |
| 17 Canadian patent law. Is that correct? | 17 different from the historical standard and still be |
| 18 PROFESSOR MERGES: Yes. | 18 in compliance. I mean that's my view. |
| 19 THE PRESIDENT: But you have not | 19 MS. CHEEK: I have no further |
| 20 studied the other elements? | 20 questions, Mr. President. |
| 21 PROFESSOR MERGES: Not in any depth. | 21 THE PRESIDENT: Mr. Luz, any follow-up |
| 22 THE PRESIDENT: So you do not know | 22 questions for the Respondent? |
| 23 whether they are overlapping or interacting? | 23 MR. LUZ: No follow-up questions. |
| 24 PROFESSOR MERGES: No. | 24 THE PRESIDENT: Thank you, Professor |
| 25 THE PRESIDENT: Thank you. I have | 25 Merges, for testifying. You are now released as an |
| www.dianaburden.com | www.dianaburden.com |
| 1417 | 1418 |
| 1 expert witness and excused. | 1 connection, the Tribunal expects you to give the |
| 2 PROFESSOR MERGES: Thank you very | 2 statement, the text of which is in front of you. |
| 3 much. | 3 MR, KUNIN: I solemnly declare upon my |
| 4 THE PRESIDENT: Say ten minutes break | 4 honor and conscience that my statement will be in |
| 5 15? 10 minutes. | 5 accordance with my sincere belief. |
| 6 (Recess taken) | 6 THE PRESIDENT: Thank you, Mr. Kunin. |
| 7 STEPHEN GARY KUNIN | 7 Could you please go to your first Expert Report, |
| 8 THE PRESIDENT: Good afternoon, | 8 which is dated September 26, 2014. Go to page 20. |
| 9 Mr . Kunin. | 9 MR. KUNIN: I have it in front of me. |
| 10 Mr. KUNIN: Good afternoon. | 10 THE PRESIDENT: Could you please |
| 11 THE PRESIDENT: Please state your full | 11 confirm for the record that the signature appearing |
| 12 name for the record. | 12 above your name is your signature? |
| 13 Mr. KUNIN: My name is Stephen Gary | 13 MR, KUNIN: It is. |
| 14 Kunin. | 14 THE PRESIDENT: Could you please go to |
| 15 THE PRESIDENT: Mr. Kunin, you appear | 15 the second, the Reply Expert Report, page 8? That is |
| 16 as an expert witness for the Claimant. If any | 16 dated September 9, 2015. Could you confirm for the |
| 17 question is unclear to you, either because of | 17 record that the signature above your name is your |
| 18 language or for any other reason, please do seek a | 18 signature? |
| 19 clarification because, if you don't do so, the | 19 MR. KUNIN: I do. |
| 20 Tribunal will assume that you've understood the | 20 THE PRESIDENT: Is there any |
| 21 question and that your answer corresponds to the | 21 correction you wish to make to either report? |
| 22 question. | MR. KUNIN: No, I have no corrections. |
| 23 Mr. Kunin, you will appreciate that | 23 <br> THE PRESIDENT: Thank you. Ms. Cheek, |
| 24 testifying, be it before a court or an arbitral | 24 direct, please. |
| 25 tribunal, is a very serious matter. In that | 25 MS. CHEEK: Mr. Kunin, can you please |

## present your presentation for the Tribunal?

2 Presentation by mr. Kunin
3 MR. KUNIN: Yes. Thank you.
4 Again, I'm Stephen Kunin. I'm a partner in the Oblon firm in Alexandria, Virginia. I spent more than 34 years at the U.S. Patent and Trademark Office in many capacities. I was the deputy Commissioner for patent examination policy, deputy assistant Commissioner for a patent examining group director in two different examining groups; supervisory patent examiner and a patent examiner.

Today I'm going to focus my testimony on USPTO practice and procedure as set forth in the USPTO's manual of patent examining procedure known as MPEP. This provides guidance to practitioners and examiners on PTO practices and procedures. It reflects the USPTO's interpretation of U.S. law. 18

New ediions and revisions are issued on a regular basis, and most specifically l'm going 20 to talk about the 1992, 1995 and 2001 examination 21 guidelines on utility which have been incorporated into the MPEP.

23
24 24 and in the guidelines, the focus is on the claimed 25 invention. The applicant need only have a single
www.dianaburden.com

| www.dianaburden.com | www.dianaburden.com |
| :---: | :---: |
| 1421 | 1422 |
| 1 bar for pharmaceutical claims. It's not an onerous | 1 done through showing structurally similar compounds |
| 2 standard. Any public benefit satisfies section 101, | 2 with an established utility. It also can be shown |
| 3 utility, even if it's not in commercially available | 3 through data from in vitro or in vivo animal testing |
| 4 form. Also, importantly, as you'll see from the | 4 that reasonably correlates to treatment in humans. |
| 5 guidelines, mere identification of a pharmacological | 5 Even in such circumstance the evidence need not |
| 6 activity relevant to an asserted use is sufficient. | 6 establish utility with statistical certainty. |
| $7 \quad$ For example, if the compound is | 7 Specific guidance is provided in the |
| 8 asserted to reduce blood pressure, control bad | 8 MPEP with respect to applicants being able to submit |
| 9 cholesterol, that's the kind of pharmacological | 9 post-filing or post-priority evidence to rebut the |
| 10 activity that is relevant to the asserted use. | 10 examiner's prima facie showing of lack of utility. |
| 11 Human clinical data is not required to | 11 Again, this evidence need only relate to the |
| 12 establish utility. The mere initiation of clinical | 12 examiner's rejection, and confirm that the claimed |
| 13 trials creates a presumption that the claimed | 13 invention had utility at the time of filing. |
| 14 invention is useful. The claimed invention is | 14 The 1992 and 1995 as well as the 2001 |
| 15 presumed to have utility, so the burden is on the | 15 utility guidelines all provided guidance to examiners |
| 16 examiner when making a rejection for lack of utility, | 16 as to the same utility requirement. As you've |
| 17 to show that there is a lack of utility. The | 17 already heard in testimony from others, in the United |
| 18 applicant is not required to show evidence of utility | 18 States the Supreme Court decision in 1966 basically |
| 19 unless the examiner is making such a rejection that | 19 is the standard that the three guidelines that l've |
| 20 the claimed utility is not specific, substantial and | 20 identified here are based. |
| 21 credible. | 21 There have been changes semantically |
| 22 Even where the credibility is | 22 in the terminology in the utility guidelines, but |
| 23 questioned by the examiner, the evidence that the | 23 these did not substantively change the standard. So |
| 24 applicant provides need be only necessary and | 24 you'll see when you look at the 1992 and |
| 25 reasonably supportive of the utility. This can be | 251995 guidelines words such as "definite," |
| www.dianaburden.com | www.dianaburden.com |

1 "practical," "real-world," "credible," and then,
2 comparing those to the 2001 utility guidelines, the
3 terms "specific," "substantial" and "credible" are
4 basically synonymous with the standards, again which
5 all came from the Supreme Court case from 1996 in the 6 United States.
$7 \quad$ The 2001 utility guidelines did not 8 change the utility standard applied by the USPTO. If 9 you look at the In re Fisher case, you'll see that in
10 the Fisher case what the Federal Circuit does is it
11 looks at the utility guidelines and essentially says
12 that the utility guidelines are consistent with the
13 standard applied by that court, and also makes
14 reference to the fact that the basic standards for
15 utility again come from the Brenner v Manson 1966 16 case.
17 Now, the 2001 utility guidelines
18 provided more precise and methodological guidance to
19 examiners on how to apply the utility standard to new
20 technology such as uncharacterized gene fragments.
21 You'll see here -- and I'm not going to go through
22 this in any detail -- but in the Manual of Patent
23 Examining Procedure in section 2107(II), there is the
24 systematic structured methodology which I am
25 referring to in my reports, which is reflected in the
www.dianaburden.com
classic example is a perpetual motion machine.
Unsurprisingly, when I reviewed the
file histories of the Zyprexa and Strattera patents
in the United States, I found that the examiners did
not raise a question of lack of utility. The
prosecution history is really focused on the question
of non-obviousness of the claims, so the examiners
essentially following the guidelines found the
patents complied with the utility standard.
Thank you.
THE PRESIDENT: Thank you.
MS. CHEEK: I have no direct questions
for Mr. Kunin.
THE PRESIDENT: Thank you.
Cross-examination on behalf of the respondent
MR. LUZ: Good afternoon, Mr. Kunin.
MR. KUNIN: Good afternoon.
MR. Luz: My name is Mark Luz. II'm senior counsel for the Government of Canada. Illl be
asking you a few questions about the two expert reports that you submitted in this arbitration.

Just housekeeping matters, because I
23 think I already know the answers, but just for the
24 record, you said that you've been practicing law at
25 the Oblon law firm subsequent to your career at the
www.dianaburden.com
examination guidelines themselves.

| 2 |
| :--- |
| 3 |
| USPTO has a Thibunal called the Patent Patity rejections the |

4 Appeal Board. It reviews patent examiners' decisions
5 in refusing to allow applicants' claims. I looked at
6 the website (you'll see in my report where l've
7 identified the URL for the PTAB website) and looked
8 at the decisions over a ten-year period essentially
9 before and after the 2001 guidelines went into
10 effect, and from these decisions and my review of the
11 PTO's annual reports I determined that fewer than
121 percent of all final ex parte PTAB decisions 13 involved a lack of utility rejection.

14
Now, I didn't divide them in terms of
15 where the examiner's rejection was sustained or the
16 examiner's rejection was reversed; I just at a very
17 high level indicated the percent of the decisions
18 that included a utility rejection.
19 The MPEP, again the section that I
20 mentioned is cited here in the right part of the
21 slide, indicates that rejections for lack of utility,
22 for credible utility, are rare and my review of the
23 PTAB decisions is consistent with that. Lack of
24 utility rejections are primarily involving inoperable
25 inventions or those contrary to laws of science. The
www.dianaburden.com

MR. KUNIN: Yes. I'm in my 12th year
3 in private practice.
4 MR. LUZ: You're not a Canadian
lawyer?
6 MR. KUNIN: I'm not a Canadian lawyer.
7 MR. LUZ: So you're not holding
yourself out as an expert on Canadian patent law?
9 MR. kUNIN: No. In fact, Ithink
10 you'll see from the expert reports I'm holding myself
as an expert on PTO practice and procedure.
12 MR. LUZ: Thank you. You just went in
13 your presentation this morning to slide 20 , which is
14 behind tab 1 of your binder.
MR. KUNIN: I have that in front of
me, yes.
17 MR. LUZ: You indicate here that you 18 had done a search for rejections by USPTO based on lack of utility?

21 to do so, if we go to my second Expert Report and we
22 go to page 2 and, in particular, the footnote that is
23 at the bottom of that page, this is what I was
24 referring to in my presentation.
1 U.S. Patent and Trademark Office?

15
-

MR. kunin: Yes. If you'll permit me

MR. LUZ: Let's just say -- l'll read
www.dianaburden.com

1 it into the record -- footnote 8 on page 2 of your
2 second Expert Report, IIIl read paragraph 6, to which
3 the footnote is: "In my experience, rejections of
4 claims by patent examiners on the basis of lack of
5 utility under 35 U.S.C. section 101 are rare for
6 pharmaceutical inventions as well as for all other
7 inventions." And the footnote is what you were
8 talking about: "To confirm my conclusion that
9 rejections of claims by USPTO examiners based on lack
10 of utility are rare, I conducted an exemplary search
11 of final ex parte PTAB decisions on the USPTO's
12 website" -- then you give the website -- "involving
13 lack of utility rejections for a ten year period
14 (1998-2008) and determined from this data and the
15 USPTO annual reports that fewer than 1 percent of all
16 final ex parte PTAB decisions involved lack of
17 utility rejections."
18
Just for clarification, PTAB, can you
19 say what that acronym is, so we know what it is?
20 Mr. KUNIN: Yes. In fact, in my
21 presentation I indicated it's the Patent Trial and
22 Appeal Board (PTAB). That is the Tribunal of the
23 USPTO that will review patent examiners' decisions
24 that are adverse to the applicant, and permit the
25 applicant to get an appeal to this tribunal of
www.dianaburden.com

| 1429 | 1430 |
| :---: | :---: |
| 1 the utility standards, especially as applied to | 1 reference to the 2001 Guidelines as 'a more stringent |
| 2 examination of claims directed to uncharacterized | 2 test' was evidence that the law of utility changed in |
| 3 gene fragments in the field of biotechnology. I was | 3 the United States. I disagree." |
| 4 personally involved in drafting these guidelines." | 4 So I think the article that you wanted |
| $5 \quad$ Before we go on, Mr. Kunin, | 5 to turn to at tab 20 is the article that you were |
| 6 uncharacterized gene fragments, what was happening at | 6 talking about? |
| 7 the time that that prompted the review of the Utility | 7 Mr. KUNIN: Yes, that is correct. |
| 8 Guidelines because of uncharacterized gene fragments? | 8 MR. LUZ: Let's go to that article, |
| 9 Mr. KUNIN: Well, if I may, I've | 9 tab 20. For the record, it's Exhibit R-119. |
| 10 noticed in the notebook that you've provided me that | 10 MR. Kuwiv: And the reason why I bring |
| 11 you've made reference to a 2000 publication article | 11 this up is because I understood your question to give |
| 12 that I authored, which is, I guess, under tab 20. | 12 a little bit of a historical retrospective of the |
| 13 Mr. LUZ: I was going to take you | 13 history with respect to the promulgation of Utility |
| 14 there eventually. Actually, before we get there, | 14 Guidelines, and the introduction to this article |
| 15 just because I know I was about to take you there, | 15 gives such a retrospective. Let me turn to the |
| 16 but just for the Tribunal's and for everyone's | 16 section dealing with the Utility Guidelines. So what |
| 17 benefit, I believe this is the article that you | 17 this article -- |
| 18 describe in your second Expert Report at paragraph | 18 Mr. LUZ: Sorry, Mr. Kunin. Are you |
| 19 13, if you'd turn to that, and then we'll go to your | 19 turning to a particular page? |
| 20 article. | 20 MR. KUNIN: I am just preparing myself |
| 21 So your second Expert Report, | 21 but not going to a particular page to point to some |
| 22 paragraph 13. | 22 specific section. |
| 23 Mr. kunin: Yes. | 23 THE PRESIDENT: Mr. Kunin, could you |
| 24 Mr. LUZ: So "In paragraph 65 of his | 24 limit yourself to answering the questions? |
| 25 Expert Report Professor Holbrook suggested that my | 25 Mr. LUZ: I'm happy to allow the |
| www.dianaburden.com | www.dianaburden.com |

witness to elaborate a little bit, but a little bit. I think maybe I can help guide you with this because I did ask what was happening specifically with the gene sequences that led to the promulgation of the 2001 guidelines.
$6 \quad$ MR. kUNIN: Sol apologize -7 THE PRESIDENT: No, no. It's fine.
8 Anything you miss out on explanation will undoubtedly
9 be picked up in redirect. Can you repeat the 10 question?
11
MR. LUZ: Yes, if you could provide
12 some background as to what led to the promulgation of
13 these 2001 guidelines in the context of the gene
14 sequences that you referred to earlier.
15
MR. kUNIN: Yes. So the USPTO had
16 published some proposed guidelines on the written
17 description requirement. As a result of public
18 comments received, there was an interest on the part
19 of the public for the USPTO to also update its
20 Utility Guidelines with respect to the discussions
21 taking place in the public with respect to the
22 express sequence tags. As you indicated with a
23 previous witness this led to ultimately the In re
24 Fisher case, and this article gives a historical
25 retrospective that, as a result of the impetus from
www.dianaburden.com
www.dianaburden.com
1 of Patent Appeals and Interferences and the federal

2 courts to determine the true scope of the
3 substantiality criterion of the utility requirement on a case-by-case basis."

Let's turn back to paragraph 14 of
6 your second witness statement. Paragraph 14, "In my
7 article identified in footnote 132 of the Holbrook
8 Report" -- which is what we were just reading,
9 Exhibit R-119-- "I used the term 'stringent' in the
10 dictionary sense of being more 'precise'."
11 I don't mean to be facetious but was
12 there a dictionary in particular that you got the
13 definition of "stringent" and "precise" to be, or
14 were you using that as a euphemism?
15
MR. KUNIN: No. Actually l'm aware of
16 a dictionary that includes "precise" as one of a
17 number of different definitions. I think to some
18 degree here, you know, maybe I was starting to put a
19 biotech hat on, because in discussing some aspects of
20 biotech policy, the notion of precision and
21 stringency are common terminology, so this is
22 essentially to explain what I meant, but in the
23 paragraph 15 you'll also see -- and we can go back to
24 those pages in my actual article -- that is the
25 substance behind my statement of that's what I meant
www.dianaburden.com
public comments, the USPTO chose to issue what became
the 2001 Utility Guidelines in addition to the
written description guidelines to address the request
from the public.
5
-
development in technology that was happening in the
1990s that pushed the utility issue further into the
fore for the Patent Office?
$9 \quad$ Mr. KUNIN: Yes. And on page 93 of
10 the article in the background section, you will see
11 that there is a very brief description here with
12 respect to express sequence tags and the 12 comments received.
14
nh. Luz. Thank you. We taked about
the reference in Professor Holbrook's Expert Report,
so let's go to the specific part of your article from
2000. If you'd turn to page 100, it's the very last
page.
19
20 me.
21
-lr. Luz. It says: "With the Office
22 applying a more stringent test for utility than in
23 its earlier set of guidelines, it fully expects to be
24 challenged by applicants who view the law
25 differently. Therefore, it may remain for the Board
www.dianaburden.com
by the word "stringent."
2
3 article in a second but let's go to tab 10 of your
binder, which is R-55, and this is a copy of a book
Intellectual Property in the New Technological Age.
MS. CHEEK: I'm sorry, this is the
same exhibit, Professor Merges' book?
MR. LUZ: This one is tab 10, R-55. I
think it's a different exhibit than what we had been
looking at before. It's the same binder.
MS. CHEEK: We have R-55 as Intellectual Property in the New Technological Age by
Professor Merges, Menell and Lemley.
THE PRESIDENT: Are you referring,
Ms. Cheek, to the other one in tab 7? It's another
book by the Professor, as I understand it.
MS. CHEEK: Yes. Professor Merges has 8 authored multiple books. I just was a bit confused that Mr. Kunin, who is here to testify on Office
20 practice, was now going to get cross-examined based
21 on Professor Merges' book. A confusion on my part. 22 Perhaps not.
23 THE PRESIDENT: I'll allow the 24 question. Please go ahead.
25

MR. LUZ: I'll just read a description
www.dianaburden.com
to ask Mr. Kunin if he agrees with the characterization.
3 page?
5 MR. LUZ: 175. The Note on
Patent Office Utility Guidelines. It says, "The
Patent and Trademark Office has promulgated guidelines for determining the specific utility of an
invention. See Utility Examination Guidelines" and 0 it gives the 2001 reference. "The PTO guidelines
require that an asserted utility be 'specific,
credible and substantial'. The credibility element
3 was well known; it is the basis of utility rejections
for farfetched inventions such as perpetual motion
5 machines. The novel aspects of the guidelines were
1 , the definition of a 'specific' utility and 2 , the
addition of a new requirement of 'substantial'
utility."
19
Let's turn back to your article. I
20 know you actually wrote about this specifically on
21 page 96 , tab 20. Do you see the section there,
22 "Comparison with Prior Guidelines."
23
Mr. kunin: Yes.
MR. LUZ: I'll just read that, and I
25 think you'll see what Professor Merges had suggested
www.dianaburden.com

| www.dianaburden.com |  |
| :---: | :---: |
| 1 <br> IR. LUZ: We'll come back to Brenner <br> 2 in just a moment but, if you go to the next |  |
|  |  |
| 3 paragraph, page 96 , halfway through, right after |  |
| 4 footnote 70 it says, "The prior guidelines placed a |  |
| 5 great deal of emphasis on the credibility of any |  |
| 6 asserted utility. At the time the prior Guidelines |  |
| 7 were published, it seemed that in certain types of |  |
| 8 cases the PTO may have been too restrictive in its |  |
| 9 interpretation of the statute." I'm assuming you're |  |
| 10 saying that's referring to the 95 guidelines. Is |  |
| 11 that right? |  |
| 12 | mr. kunin: Yes. |
| 13 | MR. LUZ: "...and the prior guidelines |

were promulgated in response to such concerns." What you're saying here is there was a perception that the
16 PTO may have been too restrictive in its
17 interpretation and the prior guidelines were promulgated in response to such concerns?

MR. KUNIN: Well, I think that if we 19
20 go on to the top of page 97, it will give you a clear
21 appreciation, because at the top of 97 there's a
22 discussion with respect to the view of the disclosure
23 in any other evidence of record that is probative of
24 applicant assertions, so I think the commentary here
25 is the standard really is not a different standard.

1 What the situation I think was
2 relative to the '95 guidelines is that, in terms of
3 how the PTO was considering the evidence, the PTO was
4 essentially being too restrictive and, therefore, it
5 was the specific treatment of the evidence, and that
6 is what the clarification was, to basically point out
7 that the standard hasn't changed, you just need to
8 recognize what is necessary to establish utility and,
9 when that is present, the claims don't lack utility.
10
MR. LUZ: Let's just read on from
11 page 96 onto the top of 97 . "The revision [the 2001
12 guidelines] continues to note that the credibility is
13 assessed from the perspective of one of ordinary
14 skill in the art in view of the disclosure and any
15 other evidence of record, (eg test data, affidavits
16 or declarations from experts in the art, patents or
17 printed publications) that is probative of the
18 applicant's assertions). However, the issue of
19 whether any asserted utility is specific and
20 substantial is the core issue addressed therein. The
21 revision is not intended to change current PTO
22 practice with regard to assessing the credibility of 23 any asserted utility."
24 So here you're saying nothing is
25 changing on the credibility side of things but, in
terms of specific and substantial, that is the core issue that is being addressed in the 2001 guidelines, whereas that wasn't the case before?
4 MR. KUNIN: I disagree with that. 5 MR. LUZ: After that you talk about 6 Brenner v Manson.
7 Mr. KUNIN: Yes. 8 MR. LUZ: If you'd turn to tab 14, 9 I'll just read you something and ask you a question 10 based on that. This is Exhibit R-120, page 330.
11 That is Janice Mueller writing: "In the wake of the
USPTO's 2001 promulgation of the Utility Examination Guidelines discussed above, a test case was brought 4 to clarify the standards for applying the 101 utility
15 requirement to patent claims reciting ESTs (expressed sequence tags). The result in In re Fisher was a return to the Federal Circuit in 2005 to the rigorous utility criteria announced almost 40 years earlier by 19 the Supreme Court in Brenner v Manson."
20 I think as we just read and, as you
21 said, the 2001 utility guidelines was a re-emphasis
22 on the Brenner v Manson specific and substantial
23 utility criteria, whereas prior to that that was not
24 the emphasis. Is that right?
25
MR. KUNIN: Well, I don't know what
www.dianaburden.com

you mean in terms of emphasis because if we look
2 systematically at the ' 92 and ' 95 guidelines as well
3 as the 2001 guidelines, we'll see that the
4 requirements from Brenner v Manson were there. They
5 were in the guidelines. They may have used the word
6 "definite" as opposed to "specific" in certain
7 sections, but they also talked in terms of practical
8 utility, substantial utility, real world value. So
9 the standard, I don't believe, changed.
10 Now, from the standpoint of the
11 question of emphasis the whole aspect of examination
12 guidelines is to provide clear guidance to the
13 examiner, so that if there is a standard that
14 involves three parts, the examiners need to
15 appreciate that the standard involves three parts.
16 So from the standpoint of emphasis I look at emphasis
17 in terms of that, again, the ordered structure set
18 forth in the guidelines so the examiner can
19 systematically go through and see whether there's
20 well established or asserted specific, substantial
21 and credible utility. So, going through each one,
22 I'm not sure I would necessarily say there's any
23 specific emphasis over one over the other. They're
24 all three parts of the same standard.
25
MR. LUZ: Thank you, Mr. Kunin. I
www.dianaburden.com

1 Demonstrative 2, and then Professor Merges has one
2 piece of paper, so we'll denote that as Demonstrative
31.

4 THE PRESIDENT: Thank you. Any further housekeeping?

MS. CHEEK: That's all. tinothy richard holbrook THE PRESIDENT: Professor Holbrook, good afternoon.

17 question is unclear to you, either because of
18 language or for any other reason, please do seek a
19 clarification because, if you don't do so, the
20 Tribunal assumes you've understood the question and 21 that your answer corresponds to the question.

PROFESSOR HOLBROOK: Understood.
THE PRESIDENT: You will appreciate
23
24 that testifying, be it before a court or an arbitral
25 tribunal, is a very serious matter. In that
www.dianaburden.com
connection, the Tribunal expects you to give the
statement, the text of which is in front of you.
PROFESSOR HOLBROOK: I solemnly
declare upon my honor and conscience that my
statement will be in accordance with my sincere belief.
7 THE PRESIDENT: Professor Holbrook, could you please go to your Expert Report dated January 26, 2015?
10
11
12 for the record that the signature appearing above your name is your signature?
14 PROFESSOR HOLBROOK: That is my 15 signature.
16 THE PRESIDENT: Could you please go to 17 the second Expert Report dated December 5, 2015. Go
18 to page 21 , and that is dated December $5,2015$.
19 Could you confirm for the record that the signature
20 appearing above your name is your signature?
21 PROFESSOR HOLBROOK: That is my
22 signature.
23 THE PRESIDENT: Could you please tell
24 me whether you would like to correct either report?
25
PROFESSOR HOLBROOK: I have no

> www.dianaburden.com
corrections.
THE PRESIDENT: Mr. Luz or
Mr. Spelliscy, are you at least introducing the direct, if I may call it that way?

MR. LUZ: We'll introduce Professor
Holbrook to allow you to start off with your
presentation. Go ahead.
PRESENTATION BY PROFESSOR HOLBROOK PROFESSOR HOLBROOK: Thank you so much. First a little bit about who I am, just to give an overview. I am a professor at the Emory University School of Law in Atlanta Georgia. I have been a professor there since 2009. Previously I was on the faculty of the Chicago-Kent College of Law, at the Illinois Institute of Technology, unsurprisingly in Chicago.

> www.dianaburden.com

1 protection, rewarding a windfall for work that that
2 inventor did not actually accomplish. For example,
3 if someone cures a particular form of cancer it would
4 seem unfair to give them a patent that covers a cure
5 for all cancer, if that's not what they created.
These tensions and issues pervade all
patent systems, but countries may vary in which
8 doctrinal bucket they use to address these concerns.
9 My understanding of Canadian utility doctrine, that's
10 the primary home that Canada uses to address these
11 problems. In the United States we use a number of
12 different doctrines, different doctrinal buckets, but
13 the policies that they're concerned with are exactly
14 the same. So, for example, using Canadian
15 terminology of selection patents, the United States
16 is also concerned with whether or not these selection
17 patents, these claims to species have unexpected
18 results. We tend to police that concern through the 19 obviousness doctrine, however.

21 particularly with method of use claims, we do address
22 those concerns in the United States through utility
23 but also written description and enablement, and so
24 my goal today is to lay out how U.S. law addresses
25 these concerns, drawing comparisons to the Canadian

## doctrine as I go along.

As I mentioned, the U.S. patent system
2 uses three different doctrinal levers to address
4 these tensions. One, utility, which we've heard a
5 lot about today. The invention must be useful.
6 Enablement, the patent must disclose how to make and
use the invention. And written description. The
inventor must provide a description of the invention
9 that demonstrates his or her possession of the
10 invention.
11
12 measured as of the filing date. That is our snapshot
13 in time where we make the assessment of whether the
14 conditions have been satisfied. And they are closely
15 related. In fact, as we discussed earlier, the
16 Federal Circuit has specifically said in the
17 Rasmusson case section 112, the enablement provision,
18 incorporates section 101 utility as a matter of law.
19 So not only are they closely related, they are
20 intertwined and one is absolutely inextricably tied
21 to the other.
22
Enablement and written description are
23 also closely related. In the words of the Federal
24 Circuit in the en banc case Ariad they note they
25 "often rise or fall together," so the Federal Circuit
www.dianaburden.com
1 those technologies encounter the standard is going to

1 those techno
2 be different.
3
4 U.S. law has three basic requirements. The asserted
utility must be credible, which also relates to
6 operability. The utility has to be substantial. The
7 utility has to be specific. As to credible utility
8 or operability, this is asking the question does the
9 invention actually work at all, and, more
10 particularly, would one of skill in the art believe
11 at the time of the filing date that the invention
12 will work.
13
14 inoperable. They will be incredible. A perpetual
15 motion machine is an example. It violates the laws
16 of thermodynamics. There will never be a patent on a
perpetual motion machine. But there are other
categories of inventions where that credibility and
operability may change over time, and that's where
you have to explore what is the evidence for whether
21 the invention works. Baldness treatments used to be viewed as inherently incredible, inoperable. That is no longer the case. But that was a change over time.

Now, it is true for compounds, one
24 25 utility is enough, but we always have to focus, as

1 itself acknowledges that those two doctrines are very 2 closely tied.
3 So l'm going to unpack those doctrines
4 under U.S. law individually. The first is utility.
5 We see here that in section 101 you have the word
6 "useful." As Professor Merges' textbook noted you
7 also see section 112 noting you have to have
8 disclosure of how to use the invention as well. The
9 idea here for utility is, as the Federal Circuit has
10 noted, to prevent mere ideas from being patented.
11 The Supreme Court has stated that a patent is "not a
12 hunting license. It is not a reward for the search,
13 but compensation for its successful conclusion."
14 All of the U.S. experts agree that the
15 standard is uniform and generally it's low, but some
16 technologies will encounter the utility standard
17 differently. So if I can use an analogy, think about
18 high jump, right? The bar is the same height for
19 every jumper but on average some jumpers have more
20 difficulty clearing that bar. Someone who is
21 particularly short may have far more difficulty
22 clearing the bar, even if it is the same height.
23 That's how utility operates with respect to certain
24 technologies like chemistry, pharmaceuticals and
25 biotechnology. The standard is the same, but the way
www.dianaburden.com

1 everyone has emphasized, on the claims. You can't do
2 a utility analysis under U.S. law without focusing on
3 the language of the claims. So, for example, in In
4 re Gottlieb, it is true, one use disclosed was enough
5 to satisfy utility in that case. The other uses
6 which were not supported were deemed irrelevant. But
7 that's because it was a compound claim.
8 If that patent had claimed methods of
9 using the compound to effect those other disclosed
10 utilities that were not only supported, those claims
11 would have been invalid for lack of utility, so the
12 type of claim becomes very important.
13 You can also see the importance of
14 interpretation of claims and how that can impact
15 utility. In the Raytheon case one of the claims was
16 actually invalidated as inoperable because there was
17 a limitation in the claim that everyone agreed it
18 actually could not work that way. It was required.
19 That utility was required by the claim.
$20 \quad$ The other claims did not contain that
21 requirement but that was a question of claim
22 construction. The district court below had actually
23 decided those claims required that inoperable
24 component. The Federal Circuit disagreed, said it
25 didn't require that dynamic, and concluded the claims

1 were operable, but the key to the holding was what 2 did the claims mean. That's the important takeaway 3 from Raytheon.
4 A substantial utility -- and I won't
5 spend much time here; we've all discussed these and
6 are all pretty much in agreement about what these
7 mean -- substantial utility is a practice or real
8 world utility. There must be an immediate benefit to
9 the public; examples where there is not substantial
10 utility, the use as a chemical intermediary, or a
11 starting point for more research. A specific utility
12 is one which is not so vague as to be meaningless.
13 The suggestion that a chemical has biological
14 activity will not be enough.
15 So that's the basic standard for
16 utility. But, as I mentioned, U.S. patent law also
17 addresses many of the concerns of timing through
18 enablement. This statutory provision is section
19 112(a). You'll see references to section 112
20 paragraph 1 because we recently amended our statute
21 to change some of the nomenclature. That provision
22 requires the specification to contain a written
23 description of the manner and process of making and
24 using it -- "it" being the invention -- in such full,
25 clear, concise and exact terms as to enable any
www.dianaburden.com

## 1453

1 not taught anyone to make and use a vaccine for HIV,
2 so that claim was denied as too broad. Not enabled. Interestingly here he was also denied
4 protection for the avian RNA viruses generally. They
5 noted "Wright has failed to establish by evidence or
6 arguments that in February of 1983 a skilled
7 scientist would have believed reasonably that
8 Wright's success with a particular strain of an avian
9 RNA virus could be extrapolated with a reasonable
10 expectation of success to other avian RNA viruses."
11 You get this idea of prediction, how 12 widely can you speculate.
13
So enablement does act to constrain
14 scope. Broad genus claims, if they contain too many
15 inoperable embodiments, lots of chemicals that
16 actually don't work, and we take undue
17 experimentation to figure out which ones do, that's a
18 violation of enablement. As the Federal Circuit has
19 noted, typically patent applications claiming new
20 methods of treatments are supported by test results.
21 These would be called working examples, actual
22 examples, and the Canadian law, my understanding is,
23 referred to demonstration, where there's an actual
24 experiment done.
25
Now, U.S. law does allow prophetic
www.dianaburden.com

1 person skilled in the art to make and use the same.
2 So there again you see the language "use" and "make."
3 Both of components.
4
5 assess whether enablement is satisfied is whether the
6 invention can be made and used without undue
7 experimentation. Some experimentation, that's okay.
8 Too much experimentation, that's a violation of the
9 enablement requirement. Here we note again, if a
10 claim fails to meet the utility requirement because
11 it is not useful or operative, then it also fails to
12 meet the how to use aspect of enablement, so utility 13 and enablement go hand-in-hand in the U.S.

14
Enablement does act to police claim
15 scope, the breadth. In In re Wright as an example --
16 and I give you a graphical example -- the inventor
17 had discovered a vaccine for a specific virus, the
18 prog avian sarcoma virus, and there is no doubt he
19 deserved a claim covering that virus, that vaccine.
20 But he also wrote broader claims. One was to avian
21 RNA viruses, a vaccine for avian RNA viruses
22 generally, and one was so broad that it was all RNA
23 viruses, which would actually include a vaccine for
24 the HIV virus, which to this day we do not have a
25 vaccine for. So clearly he had not enabled, he had
www.dianaburden.com

1 examples where you are predicting what will happen,
2 but prophetic examples still must satisfy the undue
3 experimentation test, so the overall assessment of
4 enablement is governed by what have been called the
5 Wands factors, named after the case that elaborated
6 them. The quantity of experimentation necessary --
7 that makes sense if our test is undue
8 experimentation; the amount of direction or guidance
9 present in the patent -- how much does the
10 specification disclose; the presence or absence of
11 working examples -- that's have you actually done
12 something, clearly working examples are far more
13 helpful in satisfying enablement; the nature of the
14 invention -- curing cancer is hard, you probably
15 aren't going to be able to have broad claim scope if
16 you're trying to treat a very complicated disease;
17 the state of the prior art -- what is known, what can
18 we expect, how much can we predict; the relative
19 skill of those in the art; predictability or
20 unpredictability of the art. So this gets to the
21 same concept that we see in Canadian utility law of
22 sound prediction. That you are allowed to sort of
23 anticipate, even using prophetic examples, but you're
24 going to have to give a good explanation as to why
25 that prediction works and unpredictable arts, that
may be difficult to accomplish. And, finally, the
2 breadth of the claims are, of course, relevant.
$3 \quad$ The last requirement that polices
4 these timing concerns of is there an invention and
5 how much protection should you get is the written
6 description requirement. The statute is pretty
7 straightforward, it doesn't elaborate much. It says
8 "The specification shall contain a written
9 description of the invention." That's all it tells
10 us.
11
The courts have interpreted that
12 provision as follows. The patent disclosure must
13 "reasonably convey to those skilled in the art that
14 the inventor had possession of the claimed subject
15 matter as of the filing date." This is an "objective
16 inquiry into the four corners of the specification."
$17 \quad$ So in this way it actually polices
18 both concerns. Is there invention at all, the first
19 policy concern, and, if so, how broad of protection
20 should you get. The court noted, "Written
21 description of the invention plays a vital role in
22 curtailing claims that do not require undue
23 experimentation to make and use, and thus satisfy
24 enablement, but that have not been invented, and thus
25 cannot be described." That's the threshold question,
www.dianaburden.com
www.dianaburden.com
1 specification, but the courts have warned that is a

2 narrow exception, because you do not want that later
3 evidence to actually reflect advances in the state of
the art because that would be unfair. You hadn't invented it at that time.
6
7 Sal Sin
States polices the threshold issue is there invention
or not. Enablement to some extent does that as well.
It also polices scope.
10 how to use prong is all we're worried about. You're
simply saying how to do something. And so if you
13 haven't explained how to do something, you haven't
14 invented anything yet at all.
15 Written description, similarly, asks
16 has the inventor possessed this invention at all or
17 not. So in the ways that the Canadian utility
18 doctrine polices these policy concerns, we see those
19 concerns policed in the United States through these
20 three different doctrines. Thank you.
21
MR. LUZ: Mr. President, Canada does
22 not have any direct examination questions for
23 Professor Holbrook, so we turn him over to the
24 Claimant.
25

THE PRESIDENT: Thank you. The cross

1 is there an invention at all.
2 The court then goes on to note that
3 written description plays a second function. Written
4 description "also ensures that when a patent claims a
5 genus by its function or result, the specification
6 recites sufficient materials to accomplish that
7 function." So you see both policies being vindicated
8 in written description.
$9 \quad$ Now, all of these are assessed as of
10 the filing date, and, generally speaking, post-filing
11 evidence of a lack of utility or enablement is always
12 going to be relevant. If it doesn't work now, five
13 years later, it's highly unlikely that it worked at
14 the time of the application. But generally
15 post-filing evidence supporting utility is not relied
16 upon by the courts. The reason is simple. It risks
17 incorporating later developments in technology,
18 things that are not reflected at the state of the art
19 as the filing.
20 Now, the courts have recognized -- the
21 Federal Circuit has recognized what another court, a
22 district court, has characterized as a narrow
23 exception. That you can use post-filing evidence
24 supporting enablement and utility if it pertains to
25 the accuracy of a statement already in the
www.dianaburden.com

1 will be conducted by --
2 MS. CHEEK: Mr. Smith will be 3 examining.
4 The president: Please proceed.
5 Cross-examination on behalf of the claimant
$6 \quad$ MR. SMITH: Thank you, Mr. President.
7 We have cross-examination binders to hand you. I
8 want to note for the record that, in addition to the
9 exhibits that are on the first page and tabbed in the
10 binder, there's one additional insert I'd like to
11 include. It's in the record. It is Exhibit C-73.
12 It's excerpts from the U.S. Code, specifically the
13 U.S. Patent Act. I apologize for it not being tabbed
14 and in the binder, but it's a short exhibit and we're
15 handing it out along with the binders. (Handed)
16 Professor Holbrook, I'd like to begin
17 today by talking first about your mandate as an
18 expert witness in this case, the role you were asked
19 to perform. The specific question -- and perhaps it
20 would be helpful to turn to tab 1, your First Report,
21 and specifically to page 3 , paragraph 6 , the specific
22 question you indicate there that you were asked to
23 address in your reports is whether U.S. law has rules
24 that are "equivalent to the different concepts found 25 in Canada's utility requirement." Is that correct?

| PROFESSOR HOLBROOK: Correct, and gave <br> examples that followed after. <br> MR. SMITH: Right. So you say that <br> your report and your testimony explores that basic question, right? <br> PROFESSOR HOLBROOK: Correct. <br> MR. SMITH: And specifically, as you <br> mentioned, you say that you examined whether U.S. <br> patent law has any rules equivalent -- and here l'm <br> quoting -- to the "promise of the patent," <br> "demonstration versus sound prediction," "rules <br> against post-filing evidence" and "appropriate <br> disclosure of the basis of the sound prediction." Is <br> that correct? <br> 15 PROFESSOR HOLBROOK: That's what the <br> 16 report says, yes. <br> 17 MR. SMITH: Is that what you provided <br> 18 to -- <br> 19 <br> PROFESSOR HOLBROOK: I believe it's <br> what I provided. <br> 21 <br> MR. SMITH: So to answer that <br> comparative question of equivalence, you first had to <br> make sure that you were fully up-to-date on U.S. <br> utility law, correct? <br> PROFESSOR HOLBROOK: Correct. <br> www.dianaburden.com <br> MR. SMITH: But to determine if these <br> U.S. patentability rules are equivalent to Canada's <br> utility requirement, you obviously need to be <br> familiar with Canada's utility requirement as well? <br> PROFESSOR HOLBROOK: That is correct. <br> MR. SMITH: And you are, in fact, <br> familiar with Canada's utility requirement as it <br> exists today? <br> PROFESSOR HOLBROOK: I believe that I <br> 10 am , as laid out in the reports. I can tell you how I <br> came to that conclusion. <br> 12 MR. SMITH: Well -- <br> 13 PROFESSOR HOLBROOK: I would not say <br> 14 I'm an expert in Canadian law. <br> 15 <br> MR. SMITH: I did not intend to ask <br> 16 whether you were an expert, and I apologize for <br> 17 speaking over you. <br> 18 And you are correct, you do offer a <br> 19 summary of your familiarity review of Canadian law in <br> 20 your report. Let's turn to that. It's the same <br> 21 page, paragraph 5. In that passage you summarized <br> 22 this understanding you have of the Canadian rules concerning utility. Is that right? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: This page does not have | MR. SMITH: You reviewed and relied <br> upon U.S. case law on utility? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: You reviewed and relied <br> upon patent law treatises and textbooks? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: You reviewed and relied <br> upon the MPEP, the Manual of Patent Examination <br> Procedure, of the U.S. Patent Office? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: You also reviewed and <br> relied upon publications of academic scholars? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: You also reviewed the <br> expert reports offered in this case by Professor <br> Merges and Mr. Kunin? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: Is it fair to say that <br> your review of the relevant sources on U.S. utility <br> law was comprehensive? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: So that U.S. law is the <br> first half of your comparative analysis of <br> equivalence, correct? <br> 25 PROFESSOR HOLBROOK: Correct. <br> www.dianaburden.com <br> any footnotes, does it? <br> PROFESSOR HOLBROOK: It does not. <br> MR. SMITH: Because your report does <br> not identify or disclose the basis of your <br> understanding of Canada's utility requirement, I'd <br> like to ask a few questions about how you became <br> familiar with Canada's utility doctrine. <br> PROFESSOR HOLBROOK: Of course. <br> MR. SMITH: You obtained that <br> understanding only after being retained in this case? <br> PROFESSOR HOLBROOK: Correct. <br> MR. SMITH: You had not studied, <br> taught, published on Canadian utility law before <br> that? <br> 15 PROFESSOR HOLbrook: No. <br> $16 \quad$ MR. SMITH: I promise not to ask you a <br> 17 Iong line of questions about your admissions to the <br> 18 Canadian Bar. We stipulated you're not an expert in <br> Canadian law. You agree with that? <br> 20 PROFESSOR HOLBROOK: Yes. <br> 21 MR. SMITH: But did you review <br> 22 contemporary Canadian cases set out in the last ten years? <br> 24 PROFESSOR HOLBROOK: I reviewed the <br> 25 two cases at issue in this arbitration. I reviewed |
| :---: | :---: |

2 the footnote 1. I also consulted with the Canadian representatives so they could help me understand the nature of the doctrine in Canada.
5 reviewed the decisions at issue in this case, meaning the Canadian trial court and appellate decisions regarding Lilly's Zyprexa and Strattera patents?

PROFESSOR HOLBROOK: Correct.
10 MR. SMITH: And you say you reviewed 11 scholarly work or sources indicated in footnote 1?
12 PROFESSOR HOLBROOK: Yes.
13 MR. SMITH: And only those in footnote
1?
15 PROFESSOR HOLBROOK: Well, scholarly resources --
$\begin{array}{ll}17 & \text { MR. SMITH: Any other -- } \\ 18 & \text { PROFESSOR HOLBROOK: The other }\end{array}$ 19 resources I reviewed include the Expert Reports of 20 the Canadian experts.
21 MR. SMITH: So you reviewed the
22 reports of Mr. Dimock and Mr. Gillen? PROFESSOR HOLBROOK: Mr. Dimock. MR. SMITH: Only Mr. Dimock? PROFESSOR HOLBROOK: I believe so.
www.dianaburden.com

```
MR. SMITH: Did you review the reports of Professor Siebrasse?
PROFESSOR HOLBROOK: I did.
MR. SMITH: And Mr. Wilson?
PROFESSOR HOLBROOK: I don't recall
reviewing Mr. Wilson.
MR. SMITH: And Mr. Reddon?
PROFESSOR HOLBROOK: I did not review
his.
MR. SMITH: Did you review all of the
decisions pertaining to the patents at issue in this case?
13 PROFESSOR HOLBROOK: I'm not clear
4 which all of the decisions -- in Canada and the
United States or across the globe?
MR. SMITH: I mean in Canada. Let me clarify. I believe you said when you read the
decisions at issue in this case you were referring to the actions for infringement that were decided in this case. Is that correct?
PROFESSOR HOLBROOK: Correct.
MR. SMITH: In Canada. Did you read
23 the litigation during what was called the PM(NOC)
24 stage, the prior proceedings with regard to Zyprexa 25 in particular?
```

22
www.dianaburden.com

PROFESSOR HOLBROOK: I did not.
1
2 MR. SMITH: Did you read the full
3 series of decisions in the action? Because there was
4 a remand in that case, as you may recall.
PROFESSOR HOLBROOK: I did read that.
6 MR. SMITH: Which Zyprexa decisions
did you review?
PROFESSOR HOLBROOK: I reviewed -- and
9 I'm going to use terminology that's probably U.S.
10 based since I don't know exactly the terminology --
11 the initial decision, the appeal and I reviewed the remand, I believe.
13
MR. SMITH: So l'd like to explore --
14 thank you for providing that information about the
15 basis of your understanding. I'd like to explore at
16 a high level the substance of your understanding as
17 well -- and again, I'm not asking you to opine on
18 Canadian law as an expert in that field. I want just
19 to understand what you understand Canadian law to be.
20
At paragraph 5 of your report you
21 write, "My understanding is that in Canada, where a
22 patentee has asserted or promised a certain degree of
23 utility, the applicant will be held to that promised
24 utility." Is that correct?
25
PROFESSOR HOLBROOK: Yes.
www.dianaburden.com

PROFESSOR HOLBROOK: My understanding is that that question doesn't make sense, that the
claimed utility is in part determined by construing
the claim, and once you've actually looked at the
claim that's when you determine what the promised
utility is. So I don't know exactly what you mean by the claimed utility. I think it's inextricable.
11
12 that a Canadian court would not look to isolated
13 statements in the disclosure of the application to
14 identify the utility of the patent?
PROFESSOR HOLBROOK: My understanding
16 is they would start with the claim language and look
17 at what the language requires, and then they would
18 look to the specification to inform the analysis of
19 what that claim does require.
21 purpose, to inform the analysis of what the claim
22 requires?
23
24

PROFESSOR HOLBROOK: For purposes of utility, for the promise?

MR. SMITH: Yes.
www.dianaburden.com

| the president: Hold on. Apply the <br> rule applied to your colleague. <br> MR. SMITH: I will slow down and <br> repeat the question. I apologize. <br> THE PRESIDENT: We call it the Dearden <br> rule. <br> MR. SMITH: The Dearden rule I will do <br> my best to observe. <br> 9 THE PRESIDENT: Please repeat the <br> question. <br> MR. SMITH: I will. Professor <br> 2 Holbrook, is it your understanding that evidence to <br> 3 support a sound prediction of utility must be <br> 4 included in the patent application or will not be <br> considered in Canada? <br> 16 <br> PROFESSOR HOLBROOK: My understanding <br> is it needs to be included. I don't know that I <br> 8 would know definitively that evidence that arose <br> 9 prior to filing cannot be considered. I would think <br> you would be allowed to consider the state of the <br> art. Sound prediction depends on what one skilled in <br> the art would think. I would think he would be able <br> to take evidence on that. I don't know that I <br> believe that's the strict rule. The only strict rule <br> 25 I'm aware of is post-filing evidence. <br> www.dianaburden.com <br> helpful if you could show me where you're referring to. <br> MR. SMITH: I don't have Professor <br> Siebrasse's report in the bundle, and for that I <br> apologize. I just wanted to ask about your <br> familiarity. <br> PROFESSOR HOLBROOK: I'm not going to <br> speculate without seeing what Professor Siebrasse <br> report is. <br> 10 <br> THE PRESIDENT: Unless you show the <br> report to him, I think you shouldn't pursue this line of questioning. <br> MR. SMITH: I was just asking whether <br> he recalled. <br> THE PRESIDENT: He recalls but he <br> would like to see it and then he can answer your question. <br> $\begin{array}{ll}18 & \text { MR. SMITH: That won't be necessary. } \\ 19 & \text { Professor Holbrook, are you familiar }\end{array}$ <br> with the requirement in Canadian patent law for <br> sufficiency of disclosure? <br> PROFESSOR HOLBROOK: I'm aware of its existence. I don't know exactly the contours of it. <br> MR. SMITH: Do you have any <br> understanding of that requirement? | MR. SMITH: Is it your understanding, <br> Professor Holbrook, that in Canada a court may find multiple promises of utility in a single patent? <br> PROFESSOR HOLBROOK: I don't have <br> enough knowledge to know whether that can actually arise or not. <br> MR. SMITH: Assume for the sake of argument that it does. If that were the case, is it your understanding that even if one or more promises <br> 10 are demonstrated or soundly predicted, the patent <br> 11 will be held invalid if a single promise of utility cannot be established. <br> PROFESSOR HOLBROOK: Assuming the <br> claim contains multiple utilities, promises of <br> utility, and one is lacking but one is present, then <br> the claim will be invalidated for want of utility. <br> Is that the question? <br> MR. SMITH: Not the question. <br> You testified earlier that you read <br> the report of Professor Siebrasse, right? <br> PROFESSOR HOLBROOK: I did. <br> MR. SMITH: Do you recall the passage <br> in Professor Siebrasse's report discussing cases in <br> which multiple promises of utility were identified? <br> PROFESSOR HOLBROOK: My understanding <br> is that it is comparable to the TRIPS requirements <br> that you disclose basically how to make the <br> invention, which is comparable to part of the <br> enablement requirement of the United States. <br> MR. SMITH: So, to the extent that you <br> are familiar with it, you understand it to be similar <br> to the U.S. enablement requirement? <br> PROFESSOR HOLBROOK: Requirement to <br> disclose how to make the invention, yes. <br> 11 <br> MR. SMITH: If it were similar to the <br> 12 U.S. enablement requirement, you would agree that it <br> 13 likely would serve similar policy concerns as the <br> 14 U.S. enablement requirement, would you not? <br> 15 <br> PROFESSOR HOLBROOK: With that <br> 16 assumption, yes. <br> 17 <br> MR. SMITH: I'd like to turn back now <br> 18 to U.S. patent law, you'll be relieved to hear. I <br> 19 understand that, of course, to be your principal area <br> 20 of expertise. In particular, l'd like to start by <br> 21 discussing the U.S. utility requirement. <br> 22 PROFESSOR HOLBROOK: Okay. <br> 23 MR. SMITH: In your Second Report in <br> 24 the table of contents, very conveniently, you <br> 25 identified a number of areas of agreement with |
| :---: | :---: |

## Professor Merges and Mr. Kunin.

$\begin{array}{ll}2 & \text { PROFESSOR HOLBROOK: Yes. } \\ 3 & \text { MR. SMITH: If we turn to that, page } 1\end{array}$
4 of your section report, you note that you, Professor
5 Merges and Mr. Kunin notably agree on three key
6 points: That the utility requirement is a low bar in
the United States; that there is a single standard
8 for utility across all technologies in the United
9 States; and that utility has "greater relevance" in
10 the chemical and pharmaceutical context. Is that 11 correct?
12
PROFESSOR HOLBROOK: That's correct.
13 I believe -- and if I could -- | believe that quote
14 of greater relevance is actually referencing
15 Professor Merges' discussion.
16
MR. SMITH: Yes, and I think that was
identified in the agreement between you. Because
18 that's at a relatively high level of generality, I'd
19 like to start by exploring some more specific points.
$20 \quad$ You've indicated -- and I'd like to
21 confirm -- that in the United States the patentee
22 receives an exclusive right to the invention as it is 23 claimed, correct?
24 PROFESSOR HOLBROOK: Correct.
25 IR. SMITH: The language of the claims
www.dianaburden.com

|  | www.dianaburden.com |
| :--- | :--- |
|  |  |
|  |  |
| 1 disease. |  |
| 2 | PROFESSOR HOLBROOK: Okay. |
| 3 | MR. SMITH: And that at some point |

4 the disclosure statements about performance
5 characteristics of the compound in the treatment of
6 disease, et cetera, would be identified. Those I
will call performance characteristics. Does that
make sense? Would you agree that it would be unusual
for a U.S. court to focus on those performance
characteristics in the disclosure to determine the standard for utility?
12
3 missing a necessary first step, which is to construe
14 the claim to determine what is actually required.
15 You don't simply look at the claim language in
16 isolation; you have to read the claim and interpret
17 it in light of the specification. In that active
18 interpretation, if the court concludes that those
19 performance aspects are actually required in the
20 claim, then that becomes a limitation of the claim,
21 so those would have to be present and demonstrated.
22 If the court concludes that those
23 performances are not required by the claim, then in
24 that context it would be unusual to invalidate on the 25 basis of those performance ones, but it depends on

1 therefore determines the scope of the patented invention.
3 PROFESSOR HOLBROOK: Yes.
4 MR. SMITH: And the validity of the
patent has to be assessed with respect to the claims.
PROFESSOR HOLBROOK: Correct.
MR. SMITH: And it follows that the
utility of a patent as a validity requirement also
has to be assessed with respect to the claims.
PROFESSOR HOLBROOK: Right. Correct.
MR. SUITH: You'd agree with me that
assessing utility with respect to the claims is a
bedrock principle of U.S. patent law.
PROFESSOR HOLBROOK: Yes.
MR. SMITH: Would you also agree that it would be highly unusual for a U.S. court to ignore
an explicitly claimed use, and identify the standard
for utility based on a statement in the disclosure?
PROFESSOR HOLBROOK: I don't know that they could do that. I also don't understand the question. So what do you mean by required claimed use? I'm not even following the question at this point.

25 regarding the compound for the treatment of a certain
www.dianaburden.com
how does the court interpret the claim.
2 MR. SMITH: Let me ask you a
3 hypothetical. The claim is a compound for the
4 treatment of the common cold but the disclosure
5 indicates that the same compound is also capable of
6 treating baldness. Would that assertion, that
7 performance characteristic with respect to baldness,
8 which is unrelated to the claim, be the basis for the
9 assessment of utility under U.S. law?
10
PROFESSOR HOLBROOK: It would not be
11 the basis for assessment of utility. Of course there
12 would need to be evidence in the specification that
13 it actually does treat a cold, though, so both of
14 those utilities would have to be disclosed. Saying
15 that I'm claiming a method of treating baldness but
16 all I've disclosed in the specification -- I'm sorry.
17 I'm claiming a method of treating a cold but the
18 specification only discloses evidence of baldness,
19 then you're going to lose on utility as well because
20 you have no support for the treatment of a cold.
21 You'll need support for both the cold treatment.
22 Then if you have the baldness treatment on there,
23 that in essence would become irrelevant to the method 24 claim.
25
THE PRESIDENT: May I ask a question,
www.dianaburden.com

2 when the discussion was about claim disclosure and
3 specification under Canadian law. Let's put it this
4 way, they use the terms somewhat loosely. How is it
5 in the U.S. with these the terms of art, if I may
6 call it that way? Is claim disclosure? Is
7 disclosure also called specification? Or are both
8 called specification?
9 PROFESSOR HOLBROOK: There's some
10 slippage in U.S. law, so technically the
11 specification is the description of the invention and
12 the claims. The claims are part of the
13 specification. The non-claim part has historically
14 been called the written description, but in modern
15 times, since there is now a written description
16 requirement under section 112, we tend not to use
that terminology as much so we either talk about the
18 disclosure in the claims or we'll talk generically
19 about the specification, which is somewhat inaccurate
20 because it does include the claims. So we're
21 unfortunately not as precise as we probably should 22 be.
23 THE PRESIDENT: You're more or less
24 the same, then, as in Canada?
25 PROFESSOR HOLBROOK: Yes, my
www.dianaburden.com
www.dianaburden.com
1 you've interpreted the claim. In that way the claim

2 may have multiple utilities that are required.
3 That's the Raytheon case.
4 MR. SMITH: The MPEP, the manual in
5 the USPTO, reflects this fundamental one is enough principle, doesn't it?
7 PROFESSOR HOLBROOK: If you could show 8 me where you're referring to?
$9 \quad$ MR. SUITH: Excerpts from it appear in
10 the binder at tab 6. If you turn to tab 6 the
11 relevant subsection is 2107.02 . Just to help you
12 find it, the page number in this exhibit is page 39.
13
14 there.
15 MR. SMITH: So if we turn to that
16 second paragraph in that section, it says, "It is
17 common and sensible for an applicant to identify
18 several specific utilities for an invention,
19 particularly where the invention is a product,
20 including a composition of matter. However,
21 regardless of the category of invention that is
22 claimed, an applicant need only make one credible
23 assertion of specific utility for the claimed
24 invention to satisfy sections 101 and 112; additional
25 statements of utility, even if not 'credible', do not

1 render the claimed invention lacking in utility."
2 You agree that this MPEP provision
3 accurately reflects U.S. law?
4 PROFESSOR HOLBROOK: I think it is not
5 precise, particularly given the previous part about
6 talking about the claimed invention being the focus,
7 and, again, they cite to the Raytheon case and
8 suggest this conclusion. To be clear, the MPEP is
9 not law. It's not binding on the courts. It's only
10 a reflection of practice of the Patent Office, so it
11 could be the case that this is inaccurate.
$12 \quad$ So even in Raytheon, the first claim
13 was held invalid for lack of utility because a
14 required claim limitation didn't work. It was simply
15 impossible to work. The other two claims were found
16 to have satisfied the utility requirement, but that
17 was only after the Federal Circuit rejected the lower
18 court's claim construction that would have
19 incorporated that inoperable part.
$20 \quad$ So the claims can actually contain
21 multiple utilities; it depends what it is. As a
22 generalized statement, like if I have a general
23 compound claim, multiple utilities -- one's enough.
24 For most apparatuses, one's enough. But I think this
25 speaks too broadly and generally and ignores the
important context of what does the claim actually require.
$3 \quad$ IR. SMITH: But you agree that, having
4 construed the claim and having identified other uses
5 outside the claim, a court would not find a patent to
6 lack utility if the claimed use was qualified under
7 U.S. law.
8
use is not a requirement of the claim? Let me see.
10 If the use in the specification is not a requirement
11 of the claim, then they would not reject that claim 12 on the basis of utility.
13 MR. SUITH: Additional statements of
14 utility that are not credible would not be a basis
15 for denial or invalidation if they were not read into 16 the claim.
17 PROFESSOR HOLBROOK: Correct. 18 MR. SNITH: Under Canadian law, as you
19 understand it, a failure to demonstrate or soundly
20 predict a single promise of utility is a basis for 21 invalidation. Is that correct?
22
PROFESSOR HOLBROOK: If that promise
23 is required by the claim and the claim requires only
24 that promise or other promises, yes.
25
MR. SMITH: And that's so even if
www.dianaburden.com

1 other promises of utility are found to have been
2 fulfilled or established.
3 PROFESSOR HOLBROOK: That's my
4 understanding, correct.
5 MR. SMITH: So if the U.S. has a one
6 is enough rule, is it fair to describe Canada's rule 7 as every single one?
8 PROFESSOR HOLBROOK: No, I don't think
9 that's a proper assessment because the U.S. law isn't
10 one is enough. The U.S. law is construe the claim,
11 determine what utility is required by that claim, if
12 the claim requires multiple utilities, then all of
13 those utilities will also have to be satisfied. If
14 the claim is generic to utility, such as a compound,
15 then one is enough. Or for some apparatuses one may
16 be enough.
17
18 enough. A method of treating baldness, you better
19 have support for the method of treating baldness. So
20 I don't agree with that characterization.
21 MR. SMITH: But, again, if you had
22 support for that method of treating baldness but no
23 support for other assertions of utility not found to
24 be within that claim, those additional statements of
25 utility, even if false, would not be a basis for
www.dianaburden.com

PROFESSOR HOLBROOK: Right. It's more
3 of an evolutionary step. You don't know which branch
may actually turn out to be the true innovation.
MR. SMITH: But, in Canadian law, an
6 inventor may have to establish that the invention is
7 superior to existing technologies if it is found to
8 have promised that in the disclosure. Is that right?
$9 \quad$ PROFESSOR HOLBROOK: If it has made
10 that promise and that is a requirement of the claim,
11 yes, they'll have to demonstrate that.
12 MR. SMITH: There's no requirement in
13 U.S. law that all evidence of an asserted utility be
14 included in the patent application as filed, is
15 there?
16 PROFESSOR HOLBROOK: There's no strict
17 requirement that it be filed that way. If it's
18 self-evident, it doesn't have to be in there. It's
19 preferable to do it.
20 MR. SMITH: There's no loose
21 requirement either, is there?
22 PROFESSOR HOLBROOK: No. Imean it's
23 preferable. I would not advise a client to just file
24 an application without disclosing what the invention 25 actually does.

MR. SMITH: And your reports don't point to any such requirement in the MPEP or in the case law?
4 MPEP notes, as I stated, it's common and sensible for an applicant to identify several specific utilities for an invention, so it's generally the practice to do so.
$9 \quad$ MR. SMITH: In your Second Report you 10 note that affidavits created after the date of filing
11 can be submitted to support utility, right?
12
PROFESSOR HOLBROOK: Generally 13 speaking, yes.
14
15
16
17
18
19 no obligation to include all evidence of utility in 20 the patent application, right?
21 PROFESSOR HOLBROOK: Correct. 22 MR. SMITH: This rule that applicants 23 can rely on evidence of utility not disclosed in the 24 application, that's also reflected in the MPEP, isn't 25 it?
www.dianaburden.com
made in the original application. Is that correct?
2 PROFESSOR HOLBROOK: Which rule of law
3 are you referring to, or which statement of mine are 4 you referring to?
5 MR. SMITH: This is in your First
Report at tab 1 at paragraph 34.
$\begin{array}{ll}7 & \text { PROFESSOR HOLBROOK: Yes. } \\ 8 & \text { MR. SMITH: You wrote -- and you're }\end{array}$
referring to a Federal Circuit case well known, In re Brana?
$\begin{array}{ll}11 & \text { Professor holbrook: Yes. } \\ 12 & \text { MR. SMITH: }\end{array}$
13 was used to substantiate any doubts as to the
14 asserted utility since this pertains to the accuracy
15 of a statement already in the specification. Is that correct?
17 PROFESSOR HOLBROOK: That's correct. Brana involved, arguably -- the case isn't clear -evidence generated after the filing date to support
20 the utility disclosed. So in that case they said
21 since, even though it was dicta, Brana made clear the
22 speciification in the patent disclosure itself was
23 sufficient, so there was never a reason to reach this
24 conclusion, they said we will look at this evidence
25 but only because it's being used in that narrow
www.dianaburden.com

| www.dianaburden.com |  |
| :--- | :--- |
| 1493 |  |

that case the court made clear that if you look at
2 the prior art, if you look at the specification,
3 there was sufficient support for utility in that
context, given the facts of that case, and they
distinguished from it In re ' 318 on that basis.
MR. SMITH: Bottom line, you agree
there are relatively few utility cases in the United
States, right?
$9 \quad$ PROFESSOR HOLBROOK: Relatively few
10 cases that only raise the issue of utility. In my
view, if we're talking about these ideas, it's
utility, it's enablement and written description, but
13 if you're specific to few cases raising section 101
14 utility issues only, yes, there are not that many --
15 which may not be a bad thing. Maybe applicants are
16 actually doing the right thing in waiting to file at
17 the perfect time.
18
In. SMITh. You assert that Brana was
somehow distinguished in subsequent cases but the
Brana rule remains good law, does it not?
PROFESSOR HOLBROOK: It technically
21
22 remains good law, although again In re '318 Patent
23 Litigation case, says Brana only dealt with the
24 context of a patent prosecution, and that again the
25 statement about that rule was not necessary to the

1 sense. Brana didn't use the word "narrow" -- I'm
2 taking the narrow exception terminology from the
3 later case Cre-Agri.
4 MR. SMITH: So you agree that there is
5 a rule of US law that allows the patentee or
6 applicant to rely upon post-filing evidence to
7 substantiate doubts as to the asserted utility
8 regarding statements made in the specification.
$9 \quad$ PROFESSOR HOLBROOK: I would say Brana
10 establishes that rule. I would say that In re ' 318
11 Litigation calls that rule into doubt and limits
12 Brana. It notes that in no case is there ever -- and
13 also in the cases where that has been allowed it's
14 always been superfluous, that the holding of the case
15 has always been the specification has been
16 sufficient. The need to resort to that evidence was
17 unnecessary but they did so anyway. So to the extent
18 it's a rule, it's a rule that's never had any teeth.
19 MR. SMITH: Your testimony is that 20 rule has never had any teeth?
21 PROFESSOR HOLBROOK: Right. In In re
22 Brana the first part of the conclusion said patent
23 specification was sufficient. The only other case
24 that applied the rule where it allowed that evidence
25 to be considered is the parallel case here, and in
www.dianaburden.com

1 decision, so it is a rule but it's a rule of very
2 little scope.
3 MR. SMITH: And that rule allows
4 patentees in the United States to rely on post-filing
5 evidence to establish utility in certain
6 circumstances?
7 PROFESSOR HOLBROOK: Not robustly. In
8 re '318 makes it clear that in that case they would
9 not consider post-filing evidence that supported an
10 otherwise inadequate disclosure. Cre-Agri to the
11 same extent. There are other cases that make it
12 clear that is a very narrow exception.
13 MR. SMITH: That exception exists in
14 US law such that patentees can rely on post-filing
15 evidence to establish utility, correct?
16 PROFESSOR HOLBROOK: As a technical
17 matter does Brana establish that rule and is Brana
18 still good law? Yes. But I disagree that it is a
19 robust rule and the courts have been moving to narrow
20 it. And there have been examples where the courts
21 have refused to consider post-filing evidence to
22 support the conclusion of enablement or utility.
23 MR. SMITH: It seems as if you're
24 working very hard to suggest the scope of the rule is
25 narrow, but you do not dispute the existence of the
rule, right?
2 PROFESSOR HOLBROOK: Correct. 3 MR. SMITH: And you do not dispute
4 that in Canadian law, by contrast, as you understand
5 it, patentees are never allowed to rely on
6 post-filing evidence to establish utility, correct?
7 PROFESSOR HOLBROOK: My
8 understanding -- I view that as shades of gray. Very small distinction.

10
MR. SMITH: Given all of this we've
11 discussed, in terms of the utility standards in the
12 U.S. and comparable provisions in the utility
13 requirement in Canada, is it fair to say that the
14 U.S. utility standard is by no means equivalent to
15 the Canadian utility requirement?
16
PROFESSOR HOLBROOK: If you're doing a
strict utility, substantial, credible -- now l'm
18 losing track of my own words -- substantial,
19 credible, specific utility, that doctrine versus what
20 Canada does, they're not comparable but this is not
21 the proper basis of comparison.
22 MR. SMITH: They're not comparable and
23 not equivalent, correct?
24 PROFESSOR HOLBROOK: But that's not 25 the proper basis of comparison.
www.dianaburden.com

| www.dianaburden.com |  |
| :--- | :--- |
|  | 1497 |

1 examples in the specification. So there's a tension
2 between that rule and what actually happens.
3 MR. SMITH: But that rule, as you
4 note, is well established in U.S. law, the
5 impropriety of importing claim limitations from the specification?

PROFESSOR HOLBROOK: The impropriety
8 of importing claims from the specification is a
9 strong rule. However, the claim construction
10 doctrines are also clear that a patent applicant can
11 act as his or her own lexicographer, so if they give
12 a unique express definition in the specification that
13 will be used in the claim. Moreover, if they
14 disclaim certain subject matter in the claim or in
15 the specification, then that disclaimer will be
16 imported into the claim and narrow its scope.
17
18 specification; it can also happen as a result of the
19 prosecution record at the Patent Office. In the
20 United States, as an act of construing a claim, we
21 actually look at what happened during the patent
22 application proceedings, and if a patent applicant
23 makes representation that surrenders certain things,
24 I'm not X, that will be used to restrict the scope of 25 the claim.

1
2 to 6:00, I think it is appropriate to have a
five-minute break now for the court reporters.
MR. SMITH: Yes. This is a good time.
THE PRESIDENT: Five minutes break.
Professor Holbrook, you are under testimony. It
means that you are not allowed to discuss this case
with anyone.

12 earlier when you testified about the importance of
13 focusing on the claim to assess utility, you
14 mentioned a circumstance in which one might look to
15 statements in the disclosure to construe the claim.
PROFESSOR HOLBROOK: Correct.
MR. SMITH: I just want to be clear
17
18 for the record, you are not suggesting that it would
19 be proper to import claim limitations from the 20 specification, are you?
21 PROFESSOR HOLBROOK: That would be a
22 violation of the canon's construction. However, it
23 is clear that you consult claims in lieu of the
24 specification, and at times the Federal Circuit has
25 limited the scope of the claims to the specific
www.dianaburden.com
n. SMIt. Prolessor Holbrook, in
your Second Report at paragraph 34 you say that
3 Professor Merges' assertion that post-filing evidence
4 to support utility and enablement is routinely used 5 is wrong.

PROFESSOR HOLBROOK: Correct.
$7 \quad$ MR. SMITH: You didn't cite anything
8 in support of that assertion, did you?
$9 \quad$ PROFESSOR HOLBROOK: I didn't, because
10 the citations were in the First Report.
11 MR. SMITH: I'm just curious because I
12 want to know to what assertion of Professor Merges
13 you're referring here. Where did Professor Merges
14 assert that post-filing evidence is routinely used to
15 support enablement?
16 PROFESSOR HOLBROOK: Is there a copy 17 of Professor Merges' report.
18
19
21 Second Report, and it also references his First

24 I'll get to that, too.

22 Report. Page 10, paragraph 23 of his Second Report, 23 and he refers to his First Report at paragraph 8.

MR. SMITH: Yes, those appear at tabs
PROFESSOR HOLBROOK: This is in his In response to my report at paragraph
www.dianaburden.com

23, page 10, "Professor Holbrook states: 'Contrary
2 to Professor Merges' suggestions post-filing evidence
3 has been allowed in the United States only in narrow
4 circumstances'. Nothing in my first Expert Report
5 diverges from settled U.S. law. As the report states
6 'U.S. law recognizes that evidence introduced after a
patent is filed -- including, for example, proof of
commercial success -- can definitively establish the
9 presence of utility'. The statement in my initial
10 report is accurate."
11 MR. SMITH: So Professor Merges
12 asserted that evidence introduced after a patent is
13 filed can definitively establish the presence of
14 utility?
15
PROFESSOR HOLBROOK: Right.
16 MR. SMITH: So, again, I ask where did 17 he assert that post-filing evidence is routinely used
18 to support enablement?
19 PROFESSOR HOLBROOK: Let me go back to
20 his First Report. So in his First Report, page 4,
21 paragraph 8 , he states noting at paragraph 3 the
22 Canadian utility doctrine "rejects post-filing
23 evidence of utility, whereas U.S. law recognizes that
24 evidence introduced after a patent is filed --
25 including, for example, proof of commercial use --
www.dianaburden.com

| 1501 | 1502 |
| :---: | :---: |
| 1 he dismissed as simply being about enablement, | 1 this relationship between enablement and utility and |
| 2 actually discusses how to use. His own testimony | 2 also to written description. Let's start with some |
| 3 demonstrates that the how to use prong of enablement | 3 basics. You would agree that utility, enablement and |
| 4 is utility, so In re Glass is in fact about utility. | 4 written description are distinct requirements in U.S. |
| 5 The discussions in the case law about | 5 patent law? |
| 6 enablement versus utility combine the two. This is | 6 ProFessor holbrook: They are distinct |
| 7 not a distinction that the U.S. law recognizes as | 7 doctrines. I think that what they police and the way |
| 8 firmly and succinctly as Professor Merges suggests. | 8 that you analyze them overlaps incredibly. |
| 9 MR. SMITH: So when Professor Merges | 9 Mr. SMITH: They are distinct |
| 10 used the word "utility" you believe he used the word | 10 doctrines. You agree? |
| 11 incorrectly? | 11 Professor holbrook: Yes. |
| 12 PROFESSOR HOLBROOK: \| believe he used | 12 Mr. SMITH: Let's talk about the |
| 13 it in a very narrow sense in that he was ignoring the | 13 statutory structure, if we could. I'd like to call |
| 14 fact that it also includes enablement. | 14 your attention to the handout, which is Exhibit C-73. |
| 15 MR. SMITH: But he never, in either of | 15 PROFESSOR HOLBROOK: I'm there. |
| 16 his reports, asserted that post-filing evidence is | 16 MR. SMITH: On the first page, this is |
| 17 routinely used to support enablement, correct? | 17 section 101 of the U.S. Patent Act. |
| 18 Professor holbrook: He did not use | 18 Professor holbrook: Yes. |
| 19 the word "routinely." That was my characterization | 19 Mr. SMITH: And this is the section |
| 20 of his testimony. | 20 that covers the utility requirement. Is that |
| 21 Mr. SMITH: And he did not use the | 21 correct? |
| 22 word "enablement,"correct? | 22 Professor holbrook: Part of the |
| 23 PROFESSOR Holbrook: He did not use | 23 utility requirement, where the word "useful" appears. |
| 24 the word "enablement." | 24 MR. SMITH: It says "Whoever invents |
| 25 Mr. SMITH: I'd like to turn now to | 25 or discovers any new and useful process machine, |
| www.dianaburden.com | www.dianaburden.com |

| 1 manufacturer, composition of matter, et cetera, may | 1 specification shall contain a written description of |
| :---: | :---: |
| 2 obtain a patent therefor," correct? | 2 the invention and of the manner and process of making |
| 3 PROFESSOR HOLBROOK: Correct, and any | 3 and using it," so the statutory structure identifies |
| 4 new and useful improvement but, again, the word | 4 these requirements as distinct requirements, doesn't |
| 5 "useful." | 5 it? |
| 6 MR. SMITH: And its title is | 6 PROFESSOR HOLBROOK: There's been an |
| 7 "Inventions Patentable"? | 7 ongoing debate about whether written description and |
| 8 PROFESSOR HOLBROOK: Correct. | 8 enablement should be viewed as distinct, but the law |
| 9 Mr. SMITH: If we turn the page, | 9 as it currently stands interpreting section 112 is |
| 10 section 102 covers and is titled "Conditions for | 10 yes, they are distinct. But also note that, even in |
| 11 Patentability, Novelty," correct? | 11 Professor Merges' case book, he notes the source for |
| 12 PROFESSOR HOLBROOK: Correct. | 12 the utility doctrine is both 112 and 101, and the |
| 13 MR. SMITH: If we turn the page again, | 13 courts have stated clearly that section 112, the use |
| 14 section 103 on the next page, "Conditions for | 14 requirement, incorporates as a matter of law the |
| 15 Patentability, Non-obvious Subject-matter," right? | 15 utility requirement. |
| 16 PROFESSOR HOLBROOK: Correct. | 16 Mr. SMITH: We'll come to that in a |
| 17 MR. SMITH: If we turn the page yet | 17 moment, but thank you for the preview. This |
| 18 again, and we come to section 112, this is entitled | 18 statutory structure is replicated in the manual, the |
| 19 "Specification"? | 19 MPEP, is it not? |
| 20 PROFESSOR HOLBROOK: Correct. | 20 PROFESSOR HOLBROOK: I don't know. |
| 21 MR. SMITH: And it is paragraph (a) | 21 MR. SMITH: Let's turn to tab 6. We |
| 22 that includes both the enablement requirement and the | 22 don't need to go far, just to the table of contents |
| 23 written description requirement. Is that correct? | 23 on the first page. The guidelines for the utility |
| 24 PROFESSOR HOLBROOK: That's correct. | 24 requirement appear in 2107. Is that right? |
| 25 MR. SMITH: And it says "The | 25 PROFESSOR HOLBROOK: Yes. |
| www.dianaburden.com | www.dianaburden.com |
| 1505 | 1506 |
| 1 MR. SMITH: And the guidelines for | 1 asserted that these U.S. doctrines of utility, |
| 2 section 112 appear elsewhere. Is that right? I | 2 enablement, written description "often rise or fall |
| 3 believe they start at 2161. That's on the third | 3 together." |
| 4 page. | 4 PROFESSOR HOLBROOK: That's not my |
| 5 PROFESSOR HOLBROOK: Yes. | 5 assertion. That's the statement of the Federal |
| 6 MR. SMITH: And examiners at the | 6 Circuit. |
| 7 Patent Office treat these requirements -- utility, | 7 MR. SMITH: Let's turn to where you |
| 8 written description, enablement -- as distinct when | 8 make that assertion. I believe it's at your Second |
| 9 examining applications. Is that right? | 9 Report, paragraph 25. You say, "As I explained in my |
| 10 PROFESSOR HOLBROOK: That's not | 10 opening report, the three doctrines, utility, |
| 11 correct. | 11 enablement and written description, are closely |
| 12 Mr. SMITH: When they identify a basis | 12 related and often rise or fall together." Is that |
| 13 for rejection, they might identify one or more of | 13 right? |
| 14 these requirements. Is that right? | 14 PROFESSOR HOLBROOK: I make that |
| 15 PROFESSOR HOLBROOK: They might | 15 statement there, correct. |
| 16 identify one or more. I don't have the provision in | 16 Mr. SMITH: You don't cite to the |
| 17 front of me. I seem to recall that examiners are | 17 Federal Circuit there, do you? |
| 18 instructed that, if they make a 101 rejection, they | 18 PROFESSOR HOLBROOK: I cite to my |
| 19 should also make a 112 rejection. | 19 previous report, and the previous reports cites the |
| 20 MR. SMITH: Let's come to that in just | 20 Federal Circuit. |
| 21 a minute. Thank you for the preview again. | 21 MR. SMITH: Let's turn to that. You |
| 22 You've asserted that these three | 22 cite to paragraph 9 of your previous report, is that |
| 23 requirements are closely related, right? | 23 right? Paragraph 9 of your previous report appears |
| 24 PROFESSOR HOLBROOK: Yes. | 24 on page 5, right? And paragraph 9 of your First |
| 25 MR. SMITH: In fact, you've even | 25 Report also does not have any citations or reference |
| www.dianaburden.com | www.dianaburden.com |

1 to the Federal Circuit. Is that correct?
$2 \quad$ PROFESSOR HOLBROOK: Probably because I cited to the wrong paragraph.
4
MR. SMITH: But does paragraph 9 even
assert that the doctrines of utility, enablement and
written description often rise or fall together?
THE PRESIDENT: Two things. Can you
slow down a little bit? Secondly, the expert says he cited the wrong paragraph.

MR. SMITH: I'm coming to that.
To repeat the question for the record, does paragraph 9 assert that these doctrines,
utility, enablement and written description often rise and fall together?
15
PROFESSOR HOLBROOK: That paragraph doesn't, no.

17
18 is
is just MR. SMITH. Paragraph 9, in any event,
19
20 the wrong paragraph.
21 MR. SMITH: If we turn to paragraph
22 56, that may be the one you're looking for. You
23 write in paragraph 56, "Enablement and the written
24 description requirement are distinct but closely
25 related requirements."
www.dianaburden.com

| 1509 | 1510 |
| :---: | :---: |
| 1 PROFESSOR HOLBROOK: Correct. | 1 rise and fall together, but, as you noted, I didn't |
| 2 Mr. SMITH: Does that assert that | 2 quote the Federal Circuit at that point. |
| 3 utility, enablement and written description often | 3 MR. SMITH: You didn't quote and refer |
| 4 rise and fall together? | 4 to the Federal Circuit in your testimony here today? |
| 5 PROFESSOR HOLBROOK: Well, I basically | 5 PROFESSOR HOLBROOK: I did, but that |
| 6 took what the Federal Circuit said, it said | 6 testimony was actually discussing enablement and |
| 7 enablement and written description usually rise and | 7 written description, which was specific to those two |
| 8 fall together. Another court said written | 8 doctrines. |
| 9 description and utility usually rise and fall | 9 MR. SMITH: Let's turn to the manual |
| 10 together. If you realize that enablement | 10 and to the relationship between section 101 utility |
| 11 incorporates utility as stated by the courts, | 11 and section 112(a), enablement. |
| 12 typically enablement and utility rise and fall | 12 PROFESSOR HOLBROOK: Remind me which |
| 13 together. So if you're wanting to say that that | 13 tab. |
| 14 extrapolation is my assertion, I'm comfortable with | 14 Mr. SMITH: It's tab 6. If you could, |
| 15 that statement, but the root is Federal Circuit | 15 please turn to page 38, at subsection 4. This is in |
| 16 saying written description and enablement usually | 162107.01 of the manual. |
| 17 rise and fall together; district court saying written | 17 The section begins by stating that a |
| 18 description and utility rise and fall together. | 18 deficiency under the utility prong of 101 also |
| 19 MR. SMITH: So you defined two | 19 creates a deficiency under 112(a), correct? |
| 20 statements, one from the Federal Circuit and one from | 20 PROFESSOR HOLBROOK: Correct. |
| 21 the district court, combined them, and attributed | 21 MR. SMITH: And it then provides |
| 22 them to the Federal Circuit. Is that correct? | 22 instructions to examiners later in the passage. In |
| 23 PROFESSOR HOLBROOK: I didn't | 23 the second column over on the right about halfway |
| 24 attribute them to the Federal Circuit. Earlier in | 24 down -- |
| 25 the other part of the discussion I said they usually | 25 PROFESSOR HOLBROOK: Yes. |
| www.dianaburden.com | www.dianaburden.com |

| 1 MR. SMITH: -- it states "To avoid | 1 the same page in the parenthetical. "If such |
| :---: | :---: |
| 2 confusion, any lack of utility rejection imposed on | 2 compositions are in fact useless appellant's |
| 3 the basis of section 101 should be accompanied by | 3 specification cannot have taught how to use them." |
| 4 rejection based on 112(a)." | 4 This relationship that the court there |
| 5 PROFESSOR HOLBROOK: Correct. | 5 and the manual identify is a point of simple logic, |
| 6 MR. SMITH: And it explains that the | 6 is it not? |
| 7 rejection should indicate that because the invention | 7 PROFESSOR HOLBROOK: Yes. And now |
| 8 as claimed does not have utility a person skilled in | 8 under Rasmusson a point of law, where the Federal |
| 9 the art would not be able to use the invention as | 9 Circuit says it incorporates it as a matter of law. |
| 10 claimed. Is that correct? | 10 MR. SMITH: Sometimes the law does |
| 11 PROFESSOR HOLBROOK: Correct. | 11 incorporate logic, it is true! |
| 12 MR. SMITH: So section 101, which | 12 PROFESSOR HOLBROOK: Got to make the |
| 13 presumes a use, or requires a use, I should say, is | 13 distinction. |
| 14 part of the section 112 enablement requirement on how | 14 MR. SMITH: But the inverse logic is |
| 15 to use, right? | 15 not correct, right? |
| 16 PROFESSOR HOLBROOK: Correct. | 16 PROFESSOR HOLBROOK: Correct. There |
| 17 MR. SMITH: And that's only because | 17 are occasions when there may not be a 101 rejection |
| 18 one cannot teach how to use without there being a | 18 but there is a 112 rejection, that's true. |
| 19 use. | 19 MR. SMITH: So an invention can have a |
| 20 PROFESSOR HOLBROOK: Correct. | 20 qualifying use but the description may fail to teach |
| 21 MR. SMITH: The courts have | 21 how to use the invention? |
| 22 acknowledged this same relationship, right? | 22 PROFESSOR HOLBROOK: Correct. |
| 23 PROFESSOR HOLBROOK: Correct. | 23 MR. SMITH: In that case the |
| 24 <br> MR. SMITH: In fact, the manual quotes 25 from a CCPA decision in 1971 on the left-hand side of | 24 application would pass the utility test but fail the 25 enablement test? |
| www.dianaburden.com | www.dianaburden.com |
| 1513 | 1514 |
| 1 PROFESSOR HOLBROOK: Yes. | 1 relationship in the other direction. |
| 2 MR. SMITH: And the MPEP does not | 2 PROFESSOR HOLBROOK: Not correct. |
| 3 instruct that, if an examiner denies for 112, the | 3 MR. SMITH: Are you aware of a case in |
| 4 examiner should also deny for 101? | 4 which a court found an invention to be enabled but |
| 5 PROFESSOR HOLBROOK: Correct. | 5 not useful? |
| 6 MR. SMITH: And no cases hold that an | 6 PROFESSOR HOLBROOK: That would be |
| 7 invalidation for lack of enablement must also be | 7 nonsensical because to be enabled it has to be both |
| 8 invalidation based on lack of utility? | 8 useful and how to make. You have to teach how to |
| 9 PROFESSOR HOLBROOK: Or, to be more | 9 make and use. If it doesn't have a use then you |
| 10 precise, a violation for 112, how to make, would not | 10 can't use it so no, it's not possible. |
| 11 implicate 101. How to use might? | 11 MR. SMITH: There is no such case? |
| 12 Mr. SMITH: Yes. I'm just focused on | 12 PROFESSOR HOLBROOK: Correct. |
| 13 how to use, and I was not precise. | 13 Mr. SMITH: On that basis you agree as |
| 14 PROFESSOR HOLBROOK: How to use might. | 14 well that the requirements of enablement and written |
| 15 There are occasions when it may; occasions when it | 15 description are not co-extensive with the requirement |
| 16 may not. If you have a large, a broad genus claim | 16 for utility? |
| 17 with lots of inoperable embodiments in it, or that | 17 PROFESSOR HOLBROOK: Absolutely, |
| 18 doesn't teach how to make it or how to use it, I've | 18 they're not co-extensive. They're closely related |
| 19 got to figure out which of these various species | 19 but not co-extensive. |
| 20 actually works. That could be a how to use violation | 20 MR. SMITH: They are closely related |
| 21 as well. | 21 in your view, extrapolating from different courts, |
| 22 Mr. SMITH: So you agree there's no | 22 you believe that all three rise and fall together. |
| 23 necessary relationship in the other direction? | 23 PROFESSOR HOLBROOK: They can rise and |
| 24 PROFESSOR HOLBROOK: Correct. | 24 fall together. I didn't say necessarily they always |
| 25 MR. SMITH: In fact, there's no | 25 rise and fall together, and that's not the court's |
| www.dianaburden.com | www.dianaburden.com |

| representation. <br> MR. SMITH: You didn't say <br> necessarily, always, but you did say often, did you not? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: Not just "can." You said <br> "often." <br> PROFESSOR HOLBROOK: Often. <br> MR. SMITH: One way to test if they <br> rise and fall together is to look at patterns in the cases, right? <br> PROFESSOR HOLBROOK: Uh-huh. <br> MR. SMITH: If we could turn to tab <br> 16, this is an empirical study dated 1998 of the <br> validity of litigated patents in the United States. <br> You're familiar with this study? <br> PROFESSOR HOLBROOK: I've read it. I <br> wouldn't say that I've digested it, but I'm familiar with it. <br> MR. SMITH: And you wrote about it in <br> your report? <br> 22 PROFESSOR HOLBROOK: I wrote about it <br> 23 in response to Professor Merges' representation about <br> 24 the data contained in the report. <br> 25 <br> MR. SMITH: So this study covers an <br> www.dianaburden.com <br> 1 table, yes. I'm not entirely sure what the basis of <br> 2 that is, claims or cases, but those are the numbers <br> 3 in the table. <br> 4 MR. SMITH: If you are correct that 5 the doctrines often rise and fall together, this is <br> 6 not the pattern you would predict to see, is it? <br> 7 PROFESSOR HOLBROOK: Actually it is, <br> 8 because likely the court isn't going to hold multiple <br> 9 holdings. If it invalidates under one the claim is <br> 10 invalid. The other problem with relying on these <br> 11 data is that this is from 1995 and 1996. The written <br> 12 description requirement is an independent form of <br> 13 invalidation. It doesn't really arise until much <br> 14 later. You don't get confirmation of that until <br> 15 Ariad in the 2000s. So these data would not reflect <br> 16 the changes in the invalidations that have arisen <br> 17 since that form of written description has been <br> 18 embraced by the Federal Circuit. And that's the <br> 19 language that Ariad is referring to. When they're <br> 20 talking about rising and falling together it's that <br> 21 version of the doctrine. These cases would not <br> 22 reflect -- these data would not reflect those cases. <br> MR, SMITH: You heard Professor Merges <br> 24 this morning testify about an update to this study. <br> 25 Is that correct? | almost 8 year period, 1989-1996. It covers 239 cases in which there was a final determination on validity, and the results are reported further into the study at page 208, if you could turn to that. 208 and 209 are two tables that report challenges across different grounds, how often such challenges occurred and what the outcomes were. And in table 1, you agree there are 13 findings of invalidity on enablement/written description and one on utility. Is that right. <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: Those are reported <br> separately? <br> PROFESSOR HOLBROOK: Yes. <br> MR. SMITH: And the number of findings <br> with regard to enablement and written description <br> outnumber, 13 to 1 , the number of findings of <br> invalidity based on utility? <br> 19 PROFESSOR HOLBROOK: According to that <br> table, yes. <br> MR. SMITH: Table 2 gives the broader <br> number of decisions on these grounds, 36 on <br> enablement and written description. Only five over <br> eight years on utility, correct? <br> PROFESSOR HOLBROOK: According to this <br> www.dianaburden.com <br> PROFESSOR HOLBROOK: I don't know if <br> it was this study. I know he said there was an update to a study. I don't know that it was this study. <br> MR. SMITH: So you're not familiar <br> with a more recent study by Professors Allison and <br> Lemley regarding validity of litigated patents in the United States? <br> PROFESSOR HOLBROOK: I'm not. <br> MR. SMITH: But you surveyed the <br> literature before submitting your reports, did you not. <br> 13 PROFESSOR HOLBROOK: I didn't survey <br> statistical literature. <br> 15 MR. SMITH: This article appeared in the AIPLA quarterly journal? <br> 17 <br> not familiar with the article. <br> MR. SMITH: I mean this -- <br> PROFESSOR HOLBROOK: This one? The <br> one in front of me? Yes. <br> 22 <br> MR. SMITH: You and Professor Merges have used some sports metaphors for the utility test, restricted pretty much to track and field. |
| :---: | :---: |

MR. SMITH: Professor Merges this
3 morning testified about the patentability
4 requirements as a series of hurdles. You've
5 testified this afternoon and in your Second Report
6 about the high jump bar.
$\begin{array}{ll}7 & \text { PROFESSOR HOLBROOK: Correct. } \\ 8 & \text { MR. SMITH: And you wrote in your }\end{array}$
Second Report and you summarized this in your
10 introductory remarks as well. We can turn to that.
11 It's your Second Report at note 12 on page 6. So tab
12 2, page 6. The note starts on page 5 and continues 13 on to page 6.
14
You refer to what you believe to be
15 the appropriate comparison and you say the analogy is
16 the nature of a high jumper?
17 PROFESSOR HOLBROOK: Well, I didn't
18 draw that comparison. Professor Merges did in his
19 report.
20 MR. SMITH: Right, but you adopt it
21 and modify it in a way that you believe to be
22 appropriate?
23
PROFESSOR HOLBROOK: Correct.
24
MR. SMITH: And you offered that
25 without reference to Professor Merges this afternoon
www.dianaburden.com

| www.dianaburden.com |  |
| :--- | :--- |
|  |  |
| 1 the same height, you would expect to see that |  |
| 2 difference in height reflected in the jumper's |  |
| 3 | performance and results, right? |
| 4 | PROFESSOR HOLBROOK: What are you |
| 5 | defining as the jumper's performance and results? |

defining as the jumper's performance and results?
MR. SMITH: The jumpers you
identified. Shorter jumpers and taller jumpers.
PROFESSOR HOLBROOK: Right. The
taller jumpers, i.e. technologies that are fairly
predictable, will clear the bar more readily and will
not be an issue. Shorter jumpers, pharmaceuticals,
biotech, will encounter this more frequently.
MR. SMITH: And you haven't just
implied this through this metaphor. You've stated
it. You state in your report that utility remains a
16 significant barrier to patentability in the
17 pharmaceutical context. Is that right?
PROFESSOR HOLBROOK: Yes.
MR. SMITH: Let's turn to where you
19
20 make that assertion. It's in your First Report at
21 paragraph 18. You see that sentence I just read?
$22 \quad$ PROFESSOR HOLBROOK: I'm sorry, I'm
23 confused with pages versus paragraphs. Is it
24 paragraph or page?
25

MR. SMITH: I apologize. It is
www.dianaburden.com
in your presentation, did you not?
PROFESSOR HOLBROOK: Correct.
3 MR. SNITTH: So you write, "Even when
4 the bar is at the same height, some high jumpers have
the bar is at the same height, some high jumpers have
more difficulty clearing the bar. For example, on
average taller high jumpers are more successful than
shorter high jumpers. Even with the bar at the same
height on average a shorter jumper will have more
difficulty clearing the bar than a taller one. The
10 same applies to patents. Some technologies have an
11 easier time clearing the utility requirement, while
12 others, like pharmaceuticals have a more difficult
13 time on average even though the bar is the same."
14 That's your testimony, right?
professor holbrook: Yes.
MR. SMITH: So you agree that the
16
17 utility test in the United States, if we conceive of
18 it as a high jump bar, is at the same level for all 19 technologies?
20 PROFESSOR HOLBROOK: Yes.
21 MR. SMITH: But you assert that
22 different jumpers in different fields of technology
23 may have more or less difficulty clearing the bar?
24 PROFESSOR HOLBROOK: Yes.
25 MR. SMITH: And with the bar set at
www.dianaburden.com
paragraph 18 on page 7 . It's near the bottom of that
paragraph as it appears on that page. What you write
there is "It remains a significant barrier" -- you're
referring to the utility requirement?
professor holbrook: Yes.
MR. SMITH: "To patentability in the
pharmaceutical context."
PROFESSOR HOLBROOK: Pharmaceutical, chemical and biological inventions.

MR. SMITH: And you have a footnote in support of that assertion?

PROFESSOR HOLBROOK: Well, I go on
3 and -- or I do have that at footnote 5 , and I also
4 rely on Professor Merges' case book discussing the
way that chemistry and chemists -- the nature of
6 these technologies results in compounds that you may
17 not know how they work, even though you've created
18 the compound, and that's the reason why they encounter utility differently.

MR. SMITH: I see you're now talking
about other sentences in the same paragraph. Is that right?

PROFESSOR HOLBROOK: Correct.
MR. SMITH: So I'm focused on the
sentence that says "lt remains a significant barrier
www.dianaburden.com

| 1 to patentability in the pharmaceutical context." | 1 but l'd have to look at the AIPLA quote. |
| :---: | :---: |
| 2 PROFESSOR HOLBROOK: Yes. | 2 MR. SMITH: There's not a reference |
| 3 MR. SMITH: And you have a footnote in | 3 here to what study exactly you're talking about, but |
| 4 support of that. Footnote 8. | 4 you're testifying now that you're referring to the |
| 5 PROFESSOR HOLBROOK: Yes. | 5 study we were just looking at? |
| 6 MR. SMITH: And you refer to an | 6 PROFESSOR HOLBROOK: The same. |
| 7 empirical study there? | $7 \quad$ MR. SMITH: This is the study in which |
| 8 PROFESSOR HOLBROOK: Uh-huh. | 8 there was a single invalidation for lack of utility |
| 9 MR. SMITH: You're just referring to a | 9 over an 8-year period? |
| 10 study that Professor Merges put into evidence. Is | 10 PROFESSOR HOLBROOK: Correct. |
| 11 that correct? | 11 MR. SMITH: This is the study that |
| 12 PROFESSOR HOLBROOK: Correct, which I | 12 doesn't indicate what sector that invalidation |
| 13 believe is the study we were just looking at in the | 13 occurred in? |
| 14 AIPLA law journal. | 14 PROFESSOR HOLBROOK: No, that's a |
| 15 MR. SMITH: You refer to it as a study | 15 different one. At some point in Merges' report he |
| 16 authored by Professor Merges. | 16 talks about overall invalidation rates. I think he |
| 17 PROFESSOR HOLBROOK: I don't refer to | 17 changed the percentage today, right, and I believe |
| 18 it as "authored." I refer to it as "relied upon" by | 18 that was across all technological fields. |
| 19 Professor Merges. | 19 MR. SMITH: We're referring I think to |
| 20 Mr. SMITH: At the bottom of the page, | 20 the same study -- |
| 21 footnote 8, you say "Professor Merges and his 22 co-authors." | 21 <br> PROFESSOR HOLBROOK: Right, and we may 22 be confusing studies here. |
| 23 PROFESSOR HOLBROOK: I may have | 23 THE PRESIDENT: Could you repeat your |
| 24 inadvertently suggested -- l'll have to double check | 24 question? |
| 25 if he's a co-author or not. I don't believe he is, | 25 MR. SMITH: I want to make sure we're |
| www.dianaburden.com | www.dianaburden.com |
| 1525 | 1526 |
| 1 talking about the same study. You just indicated the | 1 and the actual percentage, $1 / 239$ is .41. |
| 2 study you're discussing in this footnote is the one | 2 Is there another study in the record |
| 3 we were just talking about, the one that appears in | 3 to which you are referring? |
| 4 the binder at tab 16. The exhibit number is C-167. | 4 PROFESSOR HOLBROOK: I don't know. |
| 5 It's a study by Professors Allison and Lemley | 5 That's why I'm trying to look at Professor Merges' |
| 6 entitled Empirical Evidence on the Validity of | 6 report to see if l'm referring to that one, or if |
| 7 Litigated Patents. | 7 there's a different one to which I'm referring. |
| 8 PROFESSOR HOLBROOK: So I'm beginning | 8 THE PRESIDENT: Professor Holbrook, if |
| 9 to realize, looking at that footnote, there's the | 9 you look to the footnote on page 1 of the study, |
| 10 AIPLA study, and I do reference a Merges study which | 10 there is actually the asterisk, and you see that the |
| 11 I believe is what he referenced today when he changed | 11 authors thank a number of people, and apparently it |
| 12 his percentages. So I believe there are two studies. | 12 includes Professor Merges. Is that the basis for |
| 13 But I would need to look at the Merges report to | 13 your, if I may call it, confusion, whether it's one |
| 14 confirm that. | 14 report or two reports? |
| 15 MR. SMITH: For the record, I can | 15 PROFESSOR HOLBROOK: I think in my |
| 16 offer that I believe Professor Merges' testimony | 16 mind I just associated Merges as being an author when |
| 17 today was referring to this same study, so we're | 17 he, in fact, is not. So that's an inaccurate |
| 18 really just talking about one study. As you may | 18 statement in my footnote about whether he was the |
| 19 recall this morning, I believe Professor Merges' | 19 author or not of the study, but I believe we are |
| 20 correction was regarding the very table that we just | 20 referring to the same study. |
| 21 looked at, table 1 on page 208, and what Professor | 21 MR. SMITH: It's also understandable |
| 22 Merges corrected was his prior reference to | 22 because I believe Professor Merges today testified |
| 230.7 percent as the percentage of cases in which a | 23 he's written some three books with one of these |
| 24 lack of utility was found, and he noted that that | 24 authors. |
| 25 table does not present cases, it presents patents, | 25 PROFESSOR HOLBROOK: He writes a lot |
| www.dianaburden.com | www.dianaburden.com |

1 with Mark Lemley, who is one of the authors.
2 MR. SMITH: When you assert in your
3 First Report that utility is a significant barrier to
4 patentability in the pharmaceutical context, the only
5 study you cite in reliance on that is this one we've
6 been discussing. Is that correct?
7 PROFESSOR HOLBROOK: Yes. 8 MR. SMITH: That's the study that shows a single invalidation for a lack of utility 10 over an 8 -year period?
11 PROFESSOR HOLBROOK: That is that 12 study, yes.
13
MR. SMITH: And that study does not
14 indicate anything about the field of technology in
15 which that single invalidation took place?
PROFESSOR HOLBROOK: Correct.
MR. SMITH: It's fair to say that
18 study does not really support your assertion, isn't 19 it?
20 PROFESSOR HOLBROOK: No. Empirically
21 speaking if you're talking about litigated patents,
22 then there aren't many litigated patents, but the
23 reality is utility doctrine operates for all patents,
24 right? So we would actually hope in an ideal patent
25 system that there aren't many litigated patents
www.dianaburden.com

| 1 MR. SMITH: You didn't cite to or | 1 at least some of those studies, are you not? |
| :---: | :---: |
| 2 offer any such analysis performed by anyone else, did | 2 PROFESSOR HOLBROOK: I am. |
| 3 you? | 3 MR. SMITH: Yet you did not cite any |
| 4 PROFESSOR HOLBROOK: I did not. | 4 of those studies in support of your significant |
| 5 Mr. SMITH: And you don't dispute the | 5 barrier assertion? |
| 6 accuracy of Mr. Kunin's statistics on the rarity of | 6 PROFESSOR HOLBROOK: I did not. |
| 7 utility rejections of the -- | $7 \quad$ MR. SMITH: We've been discussing the |
| 8 PROFESSOR HOLBROOK: No. | 8 high jump bar within the United States, and specific |
| 9 MR. SMITH: -- PTO? Let's turn back | 9 to utility, but your testimony as we discussed at the |
| 10 to your high jump bar analogy. You have not provided | 10 outset was about the comparative analysis of |
| 11 any empirical data or statistics to support your | 11 doctrines in both the United States and in Canada. |
| 12 claim that pharmaceutical inventions in the U.S. have | 12 And one question you asked was whether the United |
| 13 more difficulty than inventions in other fields | 13 States and Canadian utility standards are equivalent, |
| 14 clearing the high jump bar, right? | 14 right? So if we could, it might be helpful to extend |
| 15 PROFESSOR HOLBROOK: I have not relied | 15 the high jump bar analogy. If the utility standards |
| 16 on any empirical evidence. I've relied on | 16 in Canada and the United States were equivalent, |
| 17 characterizations of how the chemical arts and the | 17 presumably they would set the high jump bar of |
| 18 pharmaceutical arts work. I've relied on the | 18 utility at the same height, right? |
| 19 characterizations in the case law about how these | 19 PROFESSOR HOLBROOK: Uh-huh. |
| 20 technologies encounter the doctrine. | 20 THE PRESIDENT: Yes? |
| 21 MR. SMITH: But empirical studies of | 21 PROFESSOR HOLBROOK: Yes. I'm sorry, |
| 22 patent litigation in the United States are conducted | 22 yes. |
| 23 routinely, are they not? | 23 MR. SMITH: And if the bar for utility |
| 24 PROFESSOR HOLBROOK: They are. | 24 in the two jurisdictions were set at the same height, |
| 25 MR. SMITH: And you are familiar with | 25 the same jumper, other things equal, should have the |
| www.dianaburden.com | www.dianaburden.com |
| 1533 | 1534 |
| 1 same result? | 1 that similar is same. |
| 2 PROFESSOR HOLBROOK: Not necessarily. | 2 MR. SMITH: I'm not asking you to |
| 3 MR. SMITH: Perform the same in both | 3 adopt that as your view. I'm asking you a |
| 4 countries? | 4 hypothetical. |
| 5 PROFESSOR HOLBROOK: Not necessarily. | 5 PROFESSOR HOLBROOK: Okay. |
| 6 MR. SMITH: We're talking about the | 6 MR. SMITH: Assume that they are the |
| 7 utility bar now, and you've said in Canada -- I'm | 7 same. |
| 8 sorry, you said in the United States it's set at a | 8 PROFESSOR HOLBROOK: Okay. |
| 9 single height for all technologies. | $9 \quad$ MR, SMITH: Now, the same jumper going |
| 10 PROFESSOR HOLBROOK: Correct? | 10 through the process in both countries, obtaining a |
| 11 MR, SMITH: And that some jumpers have | 11 patent, perhaps having it litigated, you would expect |
| 12 more difficulty, some less, clearing it? | 12 to have the same results as to the utility |
| 13 PROFESSOR HOLBROOK: Right. | 13 requirement. Is that correct? |
| 14 Mr. SMITH: Now l'm asking you to | 14 PROFESSOR HOLBROOK: Same evidence. |
| 15 hypothesize, if the doctrines in the two | 15 MR. SMITH: Yes, everything -- |
| 16 countries were equivalent -- | 16 PROFESSOR HOLBROOK: Same fact |
| 17 PROFESSOR HOLBROOK: Equivalent does | 17 finders? |
| 18 not mean equal -- | 18 Mr. SMITH: Yes. Same patent, same |
| 19 MR. SMITH: I do not need to use the | 19 evidence, same fact finders. Assume it's all the |
| 20 word "equivalent," so let me rephrase the question. | 20 same. You would expect the same result, would you |
| 21 If the utility standards in the United States and | 21 not? |
| 22 Canada were similar and required a similar showing | 22 PROFESSOR HOLBROOK: I personally |
| 23 for patentee, we might say they set the bar at the | 23 wouldn't because facts can differ. People of |
| 24 same height, right? | 24 reasonable minds can disagree about what the facts of |
| 25 PROFESSOR HOLBROOK: I would not say | 25 the case are. At a super abstract level, yes, I |
| www.dianaburden.com | www.dianaburden.com |

would agree, but when you actually talk about how these decisions are made on the ground, I would not agree with that. Particularly if the evidence is different, how people characterize the evidence is different. Now we're talking about dealing with specific facts of cases, and reasonable minds can disagree on those kind of outcomes -- and that's okay.
9 MR. SMITH: You agree patents are 10 often filed in multiple jurisdictions?
11 PROFESSOR HOLBROOK: Yes.
12 MR. SMITH: Including both Canada and 13 the United States?
14 PROFESSOR HOLBROOK: Yes.
15 MR. SVITH: But you disagree that one 16 way to assess whether the U.S. and Canadian utility
17 requirements are similar would be to look at outcomes
18 with respect to utility in both jurisdictions for the
19 same applicants and the same patents and the same 20 evidence?
21
professor holbroor. - think tha
22 would be troubling because it assumes that the
23 doctrines are exactly the same. It assumes the fact
24 finders would be exactly the same. It assumes the
25 evidence would be exactly the same. All of these
www.dianaburden.com

## information. There was no evidence that the

2 disclosure is, on its face, contrary to generally
3 accepted scientific principles."
$4 \quad$ Those were all quotes from the 5 decision, and you conclude that, in the Strattera or
6 the atomoxetine case in the United States, the use of
post-filing evidence corroborated what was considered
8 the already sufficient disclosure in the patent
9 application by the court. So the Federal Circuit
10 held Lilly's patent for Strattera to be valid, right?
PROFESSOR HOLBROOK: Correct.
MR. SMITH: So the litigation
12
13 regarding Lilly's patent for Strattera in Canada in
14 the United States would provide a basis to compare
15 the height of the utility bar in the two countries,
16 wouldn't it?
17
PROFESSOR HOLBROOK: It is one datum.
18 But you'd have to take into account what different
19 evidence was available. I think you have to take
20 into account the context of the case, the context of
21 the fact finders. The lower court here did find the
22 patent to be invalid, so that suggests to me that 23 within the United States it was a close case. The
24 evidence in the case showed that the inventor didn't
25 actually seem to know that the invention would work
www.dianaburden.com
www.dianaburden.com
1 court discusses the inventor's testimony

2 specifically -- and I'm not going to be able to
3 pronounce this name, sorry. Dr. Heiligenstein --
4 apologize if they're in the room. One of the
5 inventors testified about his uncertainty whether
6 this treatment of ADHD would be effective when he and
7 Dr. Tolefson suggested experimental testing for this
8 purpose. "Question: At the time of this filing did you have a reasonable expectation that tomoxetine
would work to treat ADHD? Answer: It was a
hypothetical. Question: Did you have a reasonable
expectation? Answer: Reasonable? Can you define
reasonable question? Did you believe it was going to
work for ADHD? Answer: No. I wasn't sure that it
would work."
16
So wen the invento is testing
that they're not convinced that it's going to work at
18 the time they're filing the application, that, to me,
19 suggests that this is a close case. When the U.S.
20 case law talks about not patenting hypotheses or not
21 patenting research proposals, that type of evidence
22 suggests that you're getting close to that line. So
23 in my opinion, this was a close case. The lower
24 court also invalidated on the basis of lack of
25 utility. So I'm not the only one who thinks that
when it filed. The inventor in the case testified
that at the time they filed, there were studies that
were going to start, but they weren't certain that
4 the invention was going to work, the method was going to work.
$6 \quad$ So the facts are close. In a close case, even with a similar standard, you may get
differing outcomes because reasonable minds can
disagree on what's the salience of those particular
10 patents. So it is a basis of comparison, but it's
11 unsurprising to me that you can get different
12 outcomes in different jurisdictions.
13 MR. SMITH: You say the facts were
14 close.
15 PROFESSOR HOLBROOK: In my opinion,
16 they were.
17
18 that?
19
20 where the decision is in the tab so I can show you to
21 what I'm referring?
22
23 decision in Mr. She appelate cour
24 moment to turn to it.
25
PROFESSOR HOLBROOK: So on page 6 the
www.dianaburden.com
this was a close case.
MR. SMITH: The Federal Circuit did
not think it was a close case, did it? The Federal
Circuit reversed the district court, right?
PROFESSOR HOLBROOK: They reversed.
They didn't characterize whether they thought it was
a close case or not. They just reversed.
MR. SMITH: The findings of fact of a
district court are due deference on appeal, are they not?
11 PROFESSOR HOLBROOK: They are.
12 MR. SMITH: But that deference here
13 must not have been deserved in view of the Federal
14 Circuit because they reversed this ruling with
15 respect to enablement, right?
16
17
18 based on - SMIH. And his reversal must be based on the Federal Circuit's view that the holding below was clearly erroneous, right?

PROFESSOR HOLBROOK: Depends. Since
21 they couch this in terms of both enablement and
22 utility, the aspects that are utility, that's
23 factual. So yes. The aspects that are enablement,
24 enablement is a legal question. At least the
25 ultimate conclusion is it enabled or not is a legal
conclusion based on underlying facts.
MR. SMITH: If we compare the
litigation regarding Lilly's patent for Strattera in
Canada and the U.S., we see, as we've discussed, that
Lilly's Strattera patent cleared the utility bar in the U.S.
7 PROFESSOR HOLBROOK: Yes. 8 MR. SMITH: And safely so, you note, given that it's a factual issue in what was reversed.
10 The same patent failed to clear the utility bar in
11 Canada, right?
12
PROFESSOR HOLBROOK: Yes.
13 MR. SMITH: And these divergent
14 outcomes suggests that the high jump bar in the U.S.
15 and Canada are set at different heights, does it not?
16 17 take-away. My take-away would be that on the factual
18 issues in this case, the courts disagree. That
19 doesn't necessarily tell me that there is systemic
20 differences in the utility standards.
21
MR. SMITH: We could also add, if we
22 go beyond utility, the written description and
23 enablement requirements to the high jump bar, right?
PROFESSOR HOLBROOK: We could.
MR. SMITH: And this Strattera patent
www.dianaburden.com
www.dianaburden.com
1 MR. SWITH: And it was not presented

2 in the case because it was not challenged.
3 PROFESSOR HOLBROOK: Correct.
4 MR. SMITH: Thank you.
$5 \quad$ There was also validity litigation in
6 the United States regarding the other patent at issue
7 here, the Zyprexa -- the patent for Zyprexa.
8 Olanzapine, as you may know it. And there was no
finding of invalidity for Zyprexa based on utility or enablement, was there?

PROFESSOR HOLBROOK: Correct.
12 Litigation in the United States focused on
13 obviousness, which is where most of the work for
14 selection patents in the U.S. takes place.
15 MR. SMITH: So Lilly's patents cleared
16 the utility, enablement and written description bars
17 in the United States, right?
18
PROFESSOR HOLBROOK: I would not say
19 that they cleared them, since particularly written
20 description was not challenged.
21
MR. SMITH: There was no finding of
22 invalidity with respect to utility, enablement or
23 written description for Lilly's two patents in the
24 United States, right?
25

1 they were not. Those issues were not raised in the
2 litigation, though, so only enablement and utility
3 was raised in the tomoxetine case.
MR. SMITH: Both failed to clear the utility bar in Canada. Is that right?

PROFESSOR HOLBROOK: Yes.
MR. SMITH: Doesn't that suggest to
you that Canada has set the utility bar higher than
the United States has set the utility, enablement and
written description bar?
PROFESSOR HOLBROOK: The outcomes of two cases did not, to me, demonstrate that there is a
significant difference in the height of utility bar.
4 Outcomes can vary based off similar facts. Moreover, there's no obligation that the laws be exactly the same. They just have to be similar.

MR. SMITH: I have some more
questions, Mr. President, but --
THE PRESIDENT: How many more minutes
MR. SMITH: I think perhaps ten 22 minutes.
23 THE PRESIDENT: Do you have any 24 redirect questions?
25

MR. LUZ: At this point,
www.dianaburden.com

Mr. President, we don't anticipate having any. one question. Mr. Smith, please continue and finish. MR. SMITH: Thank you, Mr. President. So we've discussed Lilly's Strattera and Zyprexa patents in the United States and Canada, right?
professor holbrook: Correct.
8
9 MR. SMITH: What if we broadened the lens a bit? You're aware, are you not, that Lilly's Strattera and Zyprexa patents are not the only pharmaceutical patents to have been found to lack utility in Canada?
14
15 that.
16 7 are 25 such patents in the pharmaceutical field, 23 other than these two?

PROFESSOR HOLBrook: These details I'm
19
20 not aware of. I just know there are other cases. If
21 there's something in the record you want to point me 22 to that explains this --
23
MR. SMITH: It's in the submissions of
24 the parties, but just accepting that there is a
25 number greater than 2 and around 20 , if we broaden
www.dianaburden.com
mischaracterized, at least according to us, the
submissions. That's the reason why I say leave it
aside. Technically you call it strike it out unless you would like to put it in a question to Professor Holbrook.

MR. SMITH: I agree the reference to the submissions and the implications that this is a point of agreement between the parties should be stricken.
10
11
we broaden the lens beyond the Zyprexa and Strattera
patents to look at the broader set of pharmaceutical
patents found to lack utility in Canada, that might
provide us with a more robust means of assessing
6 whether the utility doctrine in Canada and the
combination of the utility, enablement and written
description doctrines in the United States are or are
not equivalent. Do you agree?
PROFESSOR HOLBROOK: That would give a
basis. But, again, there's no obligation that they
be identical. So we're doing comparisons of
doctrines that are similar, but there is no
24 obligation they be identical. So variations in
outcomes can be expected.

1 the lens.
2 MR. LUZ: Just for the record, I don't
3 think we agree to the accuracy of those numbers, the
4 way it's been stated. I'm just not sure whether we
5 were talking about invalidations or you were talking 6 more generally.
7 THE PRESIDENT: Shall we leave that 8 part aside for submissions? We can leave that to
9 oral argument. It was not actually a question to
10 Professor Holbrook.
11 MR. SMITH: I'm not sure I understand
12 your suggestion, Mr. President.
13 THE PRESIDENT: I said strike it from
14 the record, this part, because what it is -- so now
15 it disappears from my screen.
16 MR. SMITH: The specific factual
17 number is not material if Professor Holbrook will
18 accept, for the sake of argument, that there are
19 numerous patents that have been found to lack utility 20 in Canada.

21
the presiden. You covered that
22 ground. Then you said, look, are you aware of what
23 is in submissions, and you put it not in the way of a
24 question but as an argument. "I submit to you that."
25 And then the other side said, Hey, wait a minute, you
www.dianaburden.com

MR. SMITH: But to be clear, what I'm
2 assuming in this hypothetical -- it's not even a
3 hypothetical. It's the set of cases in evidence and
4 contested by the parties in this case. That evidence
5 relates to more than 20 high jumpers whose patents
6 cover approved drugs for sale in Canada. You can
7 agree with that as a hypothetical? I mean not as a
8 hypothetical --
9 PROFESSOR HOLBROOK: As a
10 hypothetical, okay.
11 MR. SMITH: And there is often an
12 incentive to litigate the validity of patents that
13 cover approved drugs with large market shares, right?
14 PROFESSOR HOLBROOK: Yes.
15 MR. SMITH: And that's true both in
16 the United States and in Canada?
17 PROFESSOR HOLBROOK: Yes.
18 MR. SMITH: Some of these patents,
19 therefore, were likely to be litigated both in the
20 United States and in Canada?
21 PROFESSOR HOLBROOK: That could be. I
22 don't know. I don't know what strategic choices they
23 used. It would seem to be a definitive answer yes or
24 no if they're the same patents being litigated.
25 don't know.

2 patents, the same jumpers, they could be challenged
3 on utility, enablement or written description in the
4 United States, right?
5 PROFESSOR HOLBROOK: Correct. And for 6 selection patents, again, we use the obviousness 7 angle.
$8 \quad$ MR. SMITH: And you've talked about 9 the importance of kind of predicting outcomes,
10 patentees with respect to their inventions in your
11 testimony today.
12
PROFESSOR HOLBROOK: I don't know to 13 what you're referring.
14 MR. SMITH: Well, you referred to the 15 importance of being able to predict a result with
16 respect to an invention and not patent it too early.
17 PROFESSOR HOLBROOK: Oh, in terms of
18 prophetic examples, not outcomes in terms of patent 19 litigation. Yes.
20 MR. SMITH: So now I'm asking whether
21 you can help me predict outcomes in this
22 hypothetical. If you are right that the three
23 doctrinal requirements in the United States,
24 enablement, utility, written description, which are
25 the focus of your report, operate in a similar manner
www.dianaburden.com

|  | www.dianaburden.com |
| :--- | :--- |
|  |  |
| 1 didn't go explore were there parallel litigations in |  |
| 2 Canada for every case that I read |  |

2 Canada for every case that I read.
3 MR. SMITH: But you agree that would
4 be an appropriate comparison to answer the question
5 posed by your report, which is whether the two
6 systems have rules of law that are or are not
7 equivalent?
8 PROFESSOR HOLBROOK: It would be a
basis to look and see how the different rules
operate, but determining whether those outcomes must
11 be dictated, again, I'm not willing to make that 12 claim.
13
MR. SMITH: Well, you know, based on
14 evidence in the record, that the Zyprexa and
15 Strattera patents passed all three doctrines of
16 interest to you in the United States, right?
17
18 as challenged in litigation.
19 MR. SMITH: You know that the Zyprexa
20 and Strattera patents at issue in this case were not
21 invalidated on the basis of any of the three
22 doctrines covered by your report, right?
23 PROFESSOR HOLBROOK: That is
24 technically correct.
25 MR. SMITH: And you know that the
www.dianaburden.com

1 as the utility requirement in Canada, what outcomes
2 would you predict with respect to these same high
3 jumpers?
4 PROFESSOR HOLBROOK: I have no idea.
5 It would depend on the facts of each of those cases,
6 what evidence is presented, what's the state of the
7 art, are these actual similar patents or not. The
8 patents may be similar, the claims may differ. Every
9 patent is issued by a different country, so the
10 claims may not actually be the same. The evidence
11 presented could be different. In theory, the
12 specifications could be different. The legal
13 standards are allowed to flux a little bit, and so I
14 would not be willing to speculate that those outcomes
15 necessarily have to be.
16 MR. SMITH: Well, you've reviewed all
the relevant U.S. case law, have you not?
PROFESSOR HOLBROOK: Yes.
MR. SMITH: And your reports do not
19 identify any U.S. case in which a patent found to
21 lack utility in Canada had its analog in the United
22 States ruled invalid for lack of enablement or
23 written description or for inutility.
24 PROFESSOR HOLBROOK: That's not a
25 study I performed. I analyzed the U.S. case law. I
www.dianaburden.com

1 Zyprexa and Strattera patents failed only on utility
2 in Canada?
$3 \quad$ PROFESSOR HOLBROOK: I know that they
4 failed on utility in Canada. I believe that's the
5 case. The only part, I know they did fail on
6 utility. I'd have to go back and re-read the cases
7 to see. I don't recall offhand was there an
8 obviousness issue as well, but I do know they failed
9 on utility.
10 MR. SMITH: And you know that those
11 were only two of multiple patents that failed for
12 lack of utility in Canada?
13 PROFESSOR HOLBROOK: That's my
14 understanding.
15 MR. SMITH: Of that group that failed
16 for lack of utility in Canada, you're not aware of a
17 single patent that failed in the United States for
18 lack of utility or enablement or written description?
19 PROFESSOR HOLBROOK: I didn't look, so
20 I'm not aware of it. But I had no reason to be aware 21 of it. I never looked.
22 MR. SMITH: You didn't look, but you
23 do not have any awareness of such a case?
24
PROFESSOR HOLBROOK: I'm not, no. Not
25 aware of the case.

MR. SMITH: Professor Holbrook, would 2 it surprise you to learn that of this group of
3 patents found to lack utility in Canada, none had
4 failed the utility or the enablement or the written 5 description requirements in the United States?
6 PROFESSOR HOLBROOK: I'd need to know
7 if they've been challenged on that basis in the
8 United States.
$9 \quad$ MR. LUZ: I'm sorry, I'm not quite
10 sure what group counsel is referring to.
11 THE PRESIDENT: You have to be more
12 specific, Mr. Smith.
13 MR. SMITH: I think it's best to ask
14 the question as a hypothetical because Professor
15 Holbrook is unfamiliar with the larger group. But
16 I'm referring only to cases in the record and
17 summarized by Professor Levin in his testimony 18 earlier today.
19
MR. LUZ: Professor Holbrook hasn't
20 testified in either of his expert reports with
21 respect to those statistics.
22 THE PRESIDENT: Being an expert in
23 this case, the hypothetical question is allowed.
24 MR. SMITH: Professor Holbrook, would
25 it surprise you to learn that a large group of
